Thread: [\[FREE\] Dope Crypter - FUD SCANTIME & RUNTIME || .NET 2.0](#)

Donkey Death Jam - May 8, 2016, 8:23 am

Hey,

I got pretty interested in crypters over the last few days and decided to make my own. It's in no way perfect, the output file size is horrific, mainly due to my disgusting method of storing the bytes. This is mainly why I'm releasing it. I am not sure how well this works with other RATs/Botnets but I have tested it with njrat & diamond fox and the results were decent. This crypter supports native & .NET files.

Great work man! Only bad thing that it's not FUD at runtime, despite that still a great job.

EDIT: Tried it out with 3 RATs, worked flawlessly.

Now works with all RATs I've tested so far, great work mate! Keep up the good work.

Marshmallow Man - May 8, 2016, 9:47 am

Works with babylon 100% fud scantime and passes bitdefender runtime, dont have other antiviruses to test

please test runtime, op is my good friend and you can run this on vm or sandbxxied if you dont trust. we need some antiviruses to pick it up and study how to refud. :)

ThatTrollGuy - May 8, 2016, 9:51 am

Tested avast, malwarebytes, nod32, norton and kaspersky. Nothing found so far. Works scantime&runtime 100%.

I can't post links here, can you give me your skype or anything in PM?

Would you be willing to release the source?

I'm writing my own crypter in c++ and I'm having a few problems, so looking at the source for another crypter might help.

yotoprules - May 8, 2016, 10:28 am

Tested on my spare laptop windows 8 njrat slipped right through and working perfectly. hopefully people dont upload to virustotal and get rid of the FUD status.

hehexd69 - May 8, 2016, 12:16 pm

my windows defender keeps deleting it lol

can i have the password too

Hi. I wanted to thank you for the contribution. Just a little feedback on your awesome crypter, for NanoCore RAT.

Scanned on 35 AV's with 0 detection is wonderful!

Just didnt run correctly on my W7 VM environment so I will try DC and update this post with more feedback.

Thanx again for your hardwork.

Any tips/books for a person like me trying its best to learn programming?

Any tips/books for a person like me trying its best to learn programming?I didn't have nanocore to test the crypter with, so I can't provide support with that.

As for the tips, the best thing you can do is learn the basics. Once you are confident enough in your chosen language, think of the hardest thing you can to program. Start developing that and don't stop. If you don't give up, I guarantee you'll finish it & become a more knowledgeable programmer because of that. I don't have any books for you, mainly because I never really used them. I used dedicated websites to programming & I looked at other people's source code, then I studied CS in college (UK). We all have different learning styles, you'll have to find yours. Coding is really fun when you go out of your depths, you learn new things. Good luck!

It is amazing you didnt read any books and yet compared and contrast source codes to find a way to program fluently. ?

I salute you for your reply and I wish you carry on your journey of programming!

I salute you for your reply and I wish you carry on your journey of programming!It wasn't just source code, I read up on all the basics such as data types, classes and all of that. But the source code was the major boost, anything I was unsure of or didn't know I just used websites as references and learnt about them. When I started coding, my programs were terribly written, as anyone's first is. Clean, efficient coding is my priority now.

After a bit of inactivity I'm back, I did some tests, here are the results :

Following results were done with these RATs :

NJRat, LuminosityLink and NanoCore

Avast + DeepScreen : FUD Scantime & Runtime with Start-Up

Kaspersky Total Security 2016 : FUD Scantime & Runtime with Start-Up

Nod32 Antivirus 9 : FUD Scantime & Runtime with Start-Up

Malwarebytes Endpoint Security, Malwarebytes Anti-Malware : FUD Scantime & Runtime

I'll add more antivirus results as soon as I get more time, tell me what antivirus do you want me to test next.

Not working with Quasar, works with NJRat, but Needs persistence!! Gave it to my friend and he quickly found the file due to high CPU usage. I scanned it and it's totally FUD, which is pretty incredible. Any ways to get it with persistence so he can't just end the process haha?

In general, most people have atleast 2.0 installed by default. I haven't added any persistence options yet, I may do it later.
