Thread: [Clippr - Desktop Screen-shot Tool + \[source\]](#)

????? - May 8, 2016, 3:03 pm

You can find the source [here](#)

Hello, I am releasing the tool that I created for myself. I am releasing this as I would like to return something to this community and I am open to taking any feedback.

Enjoy!

Ninja - May 8, 2016, 3:20 pm

thats a big empty space in the gui

Malum™ - May 8, 2016, 3:41 pm

When you release a source, its pretty much common etiquette to comment each section at least vaguely so others understand. I'm not trying to sound rude, just suggesting. You should also add a ReadMe and document what you can do with it too. It'll attract more attention and draw more people to it.

+Haze - May 8, 2016, 4:22 pm

Why is there so much whitespace in your code? Also there is no need to use "Call" before you actually call a method. Just write the method name like it is. Your code could do with heavy re-factoring as it's poorly written.

(May 8, 2016 03:20 PM)Ninja Wrote: [\[CITE\]](#) thats a big empty space in the gui

When you take a screenshot the screenshot is displayed in that area

Eg.

[img]http://pics.keepthis.online/data/3u2zvq2u.tun.png[/img]

I only put loads of blank lines because it helps me distinguish between different sections, I don't really think it looks that messy for myself but I can see it being a problem.

I definitely agree that the code can be improved a lot and will gradually keep improving it.

(May 8, 2016 03:41 PM)Malem Wrote: [\[CITE\]](#) When you release a source, its pretty much common etiquette to comment each section at least vaguely so others understand. I will add this in the future, I was just not intending to release this at all

(May 9, 2016 10:16 AM)????? Wrote: [\[CITE\]](#) When you take a screenshot the screenshot is displayed in that area

Eg.

Why not collapse ? After you take a screenshot the area will open with the Width & Height of the Screenshot. this.Width & this.Height.

???? - May 9, 2016, 10:46 am

I don't really understand what you mean?

If the main gui filled up to the size of the screenshot taken it would look massively out of proportion

iNCEPTiON\_V - May 10, 2016, 3:42 pm

No.. im sorry you didnt understand me, i was thinking to hide (collapse) the blank space till you make a screenshot, so you wont have an white empty space

???? - May 10, 2016, 11:33 pm

I think that would be pretty good. However it would make the gui look stretched as there would be a massive screenshot and small buttons

Zilog80 - May 11, 2016, 12:37 am

Form2 source code is IMBA:

Spoiler [\(Click to View\)](#)PHP Code

```
<?php
```

```
Public Class Form2
```

```
    Public format As String
```

```
    Private Sub Form2_Load(sender As Object, e As EventArgs) Handles MyBase.Load
```

```
End Sub
```

```
End Class
```

(May 10, 2016 11:33 PM)???? Wrote: [\[CITE\]](#) I think that would be pretty good. However it would make the gui look stretched as there would be a massive screenshot and small buttonsyou can also make the collapse animated like when you took the picture the form expands and then the picture shows up

and adding a remove button which will remove the old taken picture and the form collapses and gets back into the small size again

and totally this is a very nice project

kind and friendly regards ?

Make it expand when you take a screenshot.

????? - May 11, 2016, 7:55 am

(May 11, 2016 07:48 AM)Ninja Wrote: [\[CITE\]](#) Make it expand when you take a screenshot.

Yeah, I know. I'm going to try and figure out how to do that

**Rosey Mutiny** - May 29, 2016, 11:53 pm

This is awesome. Thanks for the share!

????? - May 31, 2016, 2:26 am

(May 29, 2016 11:53 PM)Rosey Mutiny Wrote: [\[CITE\]](#) This is awesome. Thanks for the share!

No problem hope you enjoy it.

If ! I make any changes I will update the github

**Ninja** - May 31, 2016, 9:09 am

(May 11, 2016 07:55 AM)????? Wrote: [\[CITE\]](#) Yeah, I know. I'm going to try and figure out how to do that

Height = <number here>

that is all to expand the form height...

????? - June 7, 2016, 3:26 pm

(May 31, 2016 09:09 AM)Ninja Wrote: [\[CITE\]](#) Height = <number here>

that is all to expand the form height...

Thank you, I will probably implement this soon or later, right now I am focusing on making small and random programs to get better

**lhabZ** - June 29, 2016, 2:47 am

thnks for sharing bro !

i will see it later :D
