Thread: [CodeksBot | IRC-protocol based bot | Advanced Layer 7 Bot](#)

codeks - May 10, 2016, 5:00 am

Hello, I joined from a underground forum due to a request for my bot to be sold on Hackforums.net - This bot was programmed for educational purposes and misuse are your own responsibility.

CodeksBot is a bot that is developed for advanced types of layer 7 floods.
It is created to make a computer perform to its maximum capacity without lagging the computer.

CodeksBot is a bot that are stable and powerful.

During testing of the bot we had some insane results from just infecting our own machines and attacking with our own network connection and the amount that you can gain from one bot is pretty crazy.

I have included a picture of the dstat:
[i.imgur\(.\)com/DnPK0jN.png](#) | without ()

The bot has three types of flood:

HTTP POST

HTTP GET

HTTP STRONG

The price is affordable for everyone and it's a must-have product.

\$40 USD for the bot.

future updates are \$10 USD after you paid for the bot.

I am accepting both Paypal and Bitcoins.

Contact informations:

Code codeks@exploit.im

A graph is a graph and Medusa people probably also took advantages of the free layer7 graph service on [skypegrab\(.\)net/dstat.php](#)

This guy has shown me the power of this and I must say, even though my SST knowledge is not really good, I am amazed by the power this can get from a small amount of "zombies".
A knowledgable guy nonetheless.
