Thread: [RoastMe.Online - /r/RoastMe - Custom Web Project \(auto pilot\)](#)

Demogorgon - May 11, 2016, 2:12 am

Hello guys,

RoastMe posts on imgur & reddit made me laugh few times, so i decided to make a little project to get social on "auto pilot". It is not earning project, it is rather a test.

URL : <https://roastme.online/>

Technical info:

- It is hosted on a VPS.
- Images are automatically distributed from image directory to website, twitter & facebook for now - any ideas on which social networks to include to this list ?
- Theme is lousy & design, i am more into technical stuff than gfx ?
- Auto follow bot for twitter (to get followers based on niche - fun & comedy)

Statistics for now :

600+ unique IP hits to website (actual users, not bots) within 48 from release

Couple followers on twitter

Couple FB page likes and interactions (comments & post likes)

~200 hits daily and raising

ToDo: Auto image scrapper/grabber & sorter (to detect valid images based on white boxes from reddit comments. - With this, project will be automated 100%)

Let me know what you guys think, any suggestion or ideas ? I am open to any feedback ?

Chubs™ aka badman - May 11, 2016, 3:54 am

I actually love this! Just read a few and had a good laugh.

Not sure how it is on desktop, but on mobile it just looks like any old wordpress theme with random pictures taken from r/roastme.

However I must admit, automatically distributing the images to twitter, fb, and your website it really neat.

It's a great idea and I'm sure it can be successful.

neat.

It's a great idea and I'm sure it can be successful.

Theme is quite old indeed :D i could upgrade that some time soon.

The system is quite unique, even the follow bot is custom made in python, so far so good :) ..

Thank you for your feedback, it is very appreciated ?

Demogorgon - May 13, 2016, 3:54 pm

Bumping the thread, any more opinions :) ?
