I wish i could give as much positive feedback as the majority of the other users do but i simply can't..

I purchased this software in hope of cracking some accounts but man this software works slowly.

The software is used exactly as it should by reading the instructions but i've been stuck on trying to crack

one single account for 7 hours now (with recommended proxies). The progress bar has only managed

to get to almost a 1/10 of the whole progress bar which is to be honest terribly slow. I use all of the 6 threads my cpu has.

If it would keep working this slow this means that it would take around 70 hours for it to crack one single account, if it succeeds! (who know's if it will)

Sorry for the negative feedback but this software was simply a dissapointment in my opinion!

Don't hesitate on trying it out, this is only my personal opinion, i'm sure it will be a perfect software for the person with lower expectations!

Cheers!

If your aim is to get hits on a large combo list without manually trying each password and

username/email combo, yes this works

If you want to hack an acc just by knowing the email, then NO it won't work 100%, but it depends on your luck and social engineering skills and whatnot.

I'm going to have to agree with you, the title is very misleading this tool is just a facebook account checker... If the person doesn't have a common password you won't get into the account today's password recommend a cap and a special character which will be very difficult to crack into, it should NOT say 100% possible with this tool because then it's false advertising. I'm disappointed as well I should have done more research this is just a trial and error....

It doesn't work at all. So sad!!

I completely agree with you!!

(Jun 28, 2016 03:53 PM)akke92 Wrote: [\[CITE\]](#) I wish i could give as much positive feedback as the majority of the other users do but i simply can't..

I purchased this software in hope of cracking some accounts but man this software works slowly.

The software is used exactly as it should by reading the instructions but i've been stuck on trying to crack

one single account for 7 hours now (with recommended proxies). The progress bar has only

managed

to get to almost a 1/10 of the whole progress bar which is to be honest terribly slow. I use all of the 6 threads my cpu has.

If it would keep working this slow this means that it would take around 70 hours for it to crack one single account, if it succeeds! (who knows if it will)

Sorry for the negative feedback but this software was simply a disappointment in my opinion!

Don't hesitate on trying it out, this is only my personal opinion, I'm sure it will be a perfect software for the person with lower expectations!

Cheers!

I am also a noob but reading through the replies, this tool works by a list of prewritten generic passwords. You put in several emails and it tries to match them up. It can take 48hrs to work and then it's not 100% that it can get into listed accounts.

You also can not target emails, in the sense that if you have a gf or bf there is no guarantee it matching up the passwords.

Please anyone correct me if i am wrong this is my own assumptions

Brute force on FB? o-O

You are not only get your IP blacklisted badly but your account would be impacted as well. FB, like others monitor your activity based on IP and cookies. :/

Anyone have been able to successfully run this program, recently?

Think logically, if this actually worked as promoted, he could literally make millions by using it himself.

Instead he is selling it for so cheap, sharing it everyone who buys it, this way he risks it working less good as it did first.

But oh well 90% of the people who buy this are people who made an account on HF to buy this.

motherfawker666 - September 23, 2016, 6:28 pm

The name is kinda stupid, uncreative, and at the very least inaccurate. Brute Forcing is not hacking. I'm sure its a great tool, but it could use some design upgrades and a name change. Would certainly make it more marketable, even though i'm sure people still want it plenty. Overall a decent program function wise.

because mark zuckerberg will have an extremely complex password

these facebook cracker programs are a waste of money. yes they can detect passwords but unless you're trying to get in to someone's account who is dumb enough to have a generic password that's found on these password lists then you ain't gonna get into their account.

Once you purchase the product you will get a email address that you send proof of paying for the product. The support email will reply with your product and a .PDF that has steps on how to use the product. You can continue to use that email for further support.

I say that cuz what does someone learn from using this program? Nothing, so IMO I'd avoid it like the plague in order to use real networking, programming, linux, etc. knowledge to hack or knowledge of MySQL or whatever, etc. even though that takes many more years to do, I think it's cooler as a reward for the skills. I'm obviously not there yet but...

i was forced to post this message or else my facebook would get hacked

Morozevich83 - December 17, 2016, 10:13 pm

Hi all, i'm new to the forum and to the hacking skills aswell .I just want to access one specific facebook account that only logs in using mobile facebook app (iphone 6s plus) and i was wondering if i can configure this software to do this specific work for me. Only one account, not random hacking, and i dont have the e-mail server, only know the first part of her mail, and dont knowif it is gmail, hotmail, yahoo or outlook. I hope anyone can help me or clarify for me if i'm wrong. . Thank you for answering

does the software rotate user-agents or does it just use the device default?

for those that do not have experience with checkers they CAN be very effective but it depends on how the software does the checking. there are certain ways to make the checks more stealthy and using various user-agents is one way.

Also how often is the software updated? Once a company detects the activity as bad they will often do something to prevent the checker from working. A good checker is updated often so that it does not get blocked.

Using the FACEBOOK HACKER tool

I am new to this. So my questions might seem stupid.

I have created a Combo List and a List of Proxies. These are inserted in the top of the Cracker. But I don't know how to start the Cracker. If I click the link in the guide,I am directed to a website. But nothing happens.

What is the advice regarding Proxies? Can I use some free ones or is it better to buy a list? How many do I need?

What is a "Thread"? What should I put in this field?

How can I ensure stealth when I use the Cracker?

All the best
Thomsen50

One more small question: How can this be used on a MAC?

It can either be website or phone. It doesn't make a difference where they login in. It's still hackable.

On the demo it shows as a Windows based platform, will this work on a MAC?

Also how do you go about getting the specifics of the actual account you want to hack?

The Netflix cracker is just an example for the guide. Follow the steps exactly with the Facebook cracker and it should start working.

DarenP - March 25, 2017, 2:05 am

I've bought this and I'm sure it's fine but as a complete newb I'm having a nightmare... I've never used zip file stuff and didn't have win zip so I've downloaded win rar trial 64bit version and 7zip but from there I haven't really a clue what to do... I've also had to (nervously) turn off my firewall for now as it detected it as malware or something? Anyway, where I'm upto currently is...

'C:\Users\Toshiba\Downloads\facebook\Password List 1'... It's asking me if I want to extract and replace files in the update mode section and in the overwrite mode it's asking if it should ask before overwrite? What does it want to overwrite? In the right hand side box it shows...

I'm miles away aren't I? I'm so thick! :(

Also what are combos? I don't even know what proxys are or what they do really but at least I've heard of them... sorry for being a newb and useless... Not knocking it at all and I'm sure it's relatively straight forward when you know a little about programming and the right order to do things etc but I was so hoping that I just downloaded a program then just put in an email adress and hey presto it gives me an email password and facebook password... it's not going to quite be like that is it

Hi Vyrez... I think I've managed to get this running eventually and now have the facebook hacker icon on my desktop - from there I put a 'target' email address in the combo list creator username box along with the word list in the password list box then hit create list. I put that then in the combo, (not bothered with the proxy option as of yet) and then pressed start. It now says status working but it has been 4 hours and it has only moved barely half a centimetre of 'green' in the box at the bottom showing the progress... Does this sound right? On the example video it barely takes a couple of seconds..

My skype is set up now by the way but don't know how or when to contact you on there if I still need to.

Thanks

JackPhlack - March 28, 2017, 6:31 am

Before I try this, how exactly does it work? I watched the youtube video, and it seems simple enough, but I don't know what's going on there. Do you need to have the user's login name before you even start?

DarenP - March 28, 2017, 7:04 am

I don't get why it's taking so long... about 5 or 6 hours so far and hardly moved...

I've done something wrong haven't I? :/

Still not moved much, still about half of a cm in the progress bar at the bottom. It's getting on for about 8 or 9 hours now... doesn't seem right.

Vyrez I just tried finding you on skype but couldn't find you... there's a few people called Vyrez on there so not sure which is you.

Motives - April 3, 2017, 3:05 pm

New to the whole hacking thing, really trying to learn as much as possible, yes I understand this isn't a way to learn but I believe its a start to learn what the program is doing. Also, I do have a couple of questions..

1. Does this actually work, I've been doing my research and have found many products DO NOT work.

2. If so, what kind of setup is needed. Would I be setting up a proxy, etc?

Thanks again!

-Hopefully a soon customer.

I don't know if you deleted my post but I will post again, I think that for all the users that we have doubts about this tool we need some real proves that this really works, because everyone is scared here and we don't if this is a scam, we know HF is not responsible for this type of threads and the tools that the people sold here, so I sent it to other user that used this tool before successfully but no one answered me, so we don't know if there are some fake users and fake vouches here but we need to be careful, I think is a 50/50 risk until we have real proves that this really works.

I am not going to lie, the last line seems a little off. You do not have a 100% chance of hacking anybody, considering if your password list does not have their password in it then well, bad luck. Unless, you have some password list from a database, I doubt there is a 100% chance of hacking anyone. I'm not trying to trash your sales, just letting you know unless I am wrong.

Roger599 - May 9, 2017, 7:08 pm

My download failed Order 4ba81c9883f6 please help

Well I feel like I wasted my money a lil bit but it works I tested my own facebook for faster results from my own pass combo file trying to crack an account that's not mine right now its going a lil slow also did a virus total scan of the rar file and scanned these individual files FacebookHacker.exe & FlatUI.dll kinda worried about those but hopefully it wont harm me you have to have a pretty decent pass list for effective cracking other than that it seems to work fine it seems like speed depends on the size of your combo file the smaller the faster I think... anybody know a good list or a good list generator?

just want to hack the fb account of a female cheater from a friend .Basically, it will take the account and run it against a password list till it finds the correct password.

You will enter the email into the combo maker and run the product till it either finds the password or goes through the whole password list.

The password list was probably a bunch of obvious passwords as they are the most common passwords. I'd recommend getting a list of more complex passwords somewhere online such as RockYou.txt.

I doubt it's a real life product ? Send OP a PM, either his Rocketr is misbehaving and he has made a mistake or you are looking in the wrong place.

Proxies works on low security sites but sites like facebook and gmail have "bruteforce" as they like to call it, detection. So if a dictionary attack wont work then I dont see how this would work. To autoswitch proxies you'd be talking about a proxychain.

Just wanted to warn others not to purchase this product and waste their time and money as I did. Hopefully this comment will not be deleted. The instructions for the product are unclear. I messaged the support through the various channels they state numerous times - no help available. They also did not provide the proxies. All I can say is - it is not a coincidence that this was posted in the beginners forum. They are just looking for suckers to make money off of. Sadly I was dumb enough to fall for it.

2) It's use only brute force?

Trouble-Maker - November 12, 2017, 3:21 am

I want to access an old secondary fb account and some pages and delete them all. Would this work for the lost passwords? Would I have to be logged into my usual fb account to perform this, or is the process completely external?

What level of anonymity would I have to have in place? I'm assuming fb would disapprove, even though they're my account/pages.

Thanks in advance, Xen90

You make a combo list with the combo maker (which is provided by us) and put the combo list into the program. Everything you need is included as well as instructions on how to use.

I see.

Facebook has bruteforce protection and blacklists the IP of an bruteforce attack on their servers, this means that you will run out of proxys soon.

Allso, the e-mail for that account will be locked when too many tries are done.
Do you have a solution for all of this too? :)
If you do I will vouch all day long for you!

Looks really good. Forgive me if I'm being simple, but is there any 'progress' bar as such? If not how long does an average scan take if no match is found?

Ah ignore my last comment. It seems to work, it's just really damn slow! Really good program though.

I get stuck on creating that combolist.

What username and password do you create there?

I entered my my facebook ID and password in the combolist, then imported it and ran the thing and obviously... it tried to access my facebook account. B

But how do I get the password of the account I try to hack into (since I cannot enter a password for that in the combolist)?

(Call me stupid)

Damnyoumad - January 27, 2018, 12:03 pm

Pillsbury Doughboy - January 27, 2018, 12:14 pm

Here is my review:

Facebook hacker does not work at all. It acts as if its searching for passwords, but goes hours and doesnt really do anything. Couldnt get a refund at all. Attempted to get help but didnt really work and at the end got no replies. Asked for help and got no reply. Only got a response days later telling me to vouch for some other product.

Wouldnt recommend buying

It is simple, it runs the account against a password list till it finds the correct password.

Vouch for Vyrez,

Look, first off , anyone that thinks this isnt on the up and up... take a fucking chance, Columbus did! Youll go through a few jumps and hurdles to get the final download but its worth it and very simple. BE PATIENT, this dude gets flooded with messages, he will get to yours, trust me.

The tool works like a charm, and honestly give yourself 5 minutes to look it over, read the instructions and youll have no need for additional assistance. Its crazy simple to use.

IT WORKS! The word list provided is really big. Linking a login or multiple logins to the list to make a "combo" is super simple...

This is well worth the money.. you were going to spend that 20 on a pizza anyway, so just buy this shit and be happy.

So for \$20, I can hack "ANY" Facebook account? Or does it require for me to know the user's FB email and the wordlist will just match words from list and try to brute force?

The video tells me, that they are random account information being generated. So it does not hack an account I wish to hack?

PLEASE READ BEFORE BUYING FACEBOOK HACKER!

PLEASE READ BEFORE BUYING FACEBOOK HACKER!

PLEASE READ BEFORE BUYING FACEBOOK HACKER!

Facebook account brute forcing programs such as this, no matter how many proxies or threads you use, won't work. Once 10 or more failed login attempts are made by the program, Facebook will temporarily lock the victim's account, regardless of the proxy's country. This will stop the program's brute forcing attempt and then you are forced to start the process again. The only way you can start over, is by waiting for the locked account to be unlocked. I had successfully cracked my test Facebook accounts with this program, but it was due to the fact the loaded combo list only contained 6 passwords lol.

Now if Facebook ever had a data breach and there was a huge email/password data dump, this program would be very handy. Because the program would just have to check each account with 1 login attempt and this would not lock the account.

In the video on the main page of the post, I'm guessing his loaded combo list only contained about 5 passwords. I have contacted Vyrez via Discord numerous times to produce a video of this program actually cracking a Facebook account using a 12,000+ combo list. I have been waiting for 3 days now :p

Please don't waste your money.

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first

post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley

This depends on the account that you target, it changes per account. Yes, we recommend proxies to prevent account locks and such.

Is that bruteforcer? Do I need to have any data about FB account XYZ to make it hacked?

Even if I get a password. I need to bypass webbrowser fingerprint. Does your program care about this or do you have any trick for that? Otherwise is useless.

This is a vouch post.

I have seen individuals write their own criticisms of this product for a while now, with a numerous amount of vouches on the other hand. I purchased this product about a month ago, and I can verify that it works exactly as advertised. To begin with, the transaction was swift and easy. The customer support is helpful, polite and prompt. There are nuances of going about using this product/method which require a basic understanding of the software being used, and like with everything there are certain limitations associated with it as well. I vouch for OP/Seller product+product support.

Yes, we provide a combolist creator to help you create that. This tool runs the account against a password list until it finds the correct password.

Very interested, What information of the FB account is required by the tool? Does it need the account email? How does it work?

That is completely dependent on the password list you use.

It does not bypass 2FA, the video just shows cases a short test run of combos to show that it does work.

Hi sir,

Your programs I guess is what I'm looking for. What if FB account that I'm going to hack is using a strong password with a special character?

Do I need to know the email address or number of my victim or it has the ability to find the email by linking the profile account of the victim?

I remembered a long ago when I used the Facebook app which is in java for older phones, every time I look on the profile I can always see the email address which is hidden on modern FB apps.

(May 2, 2020 09:26 AM)jdr4pt0rph Wrote: [\[CITE\]](#) Hi sir,

Your programs I guess is what I'm looking for. What if FB account that I'm going to hack is using a strong password with a special character?

Do I need to know the email address or number of my victim or it has the ability to find the email by linking the profile account of the victim?

I remembered a long ago when I used the Facebook app which is in java for older phones, every time I look on the profile I can always see the email address which is hidden on modern FB apps.

I would love to answer all your questions! Please add me on Skype, Discord or Telegram.

Yes, you are able to target an account with just their profile link as long as it contains their FB username. The program is a brute force cracker, it runs the account against a password list till it finds the correct password.

It is impossible to calculate a success rate for a tool like this as each account is different. Yes, you will need just the username or email of the target.

Wanna try this looks like a great product right there but if you have only the user ID or username not the email does this work ?

What about the region/IP lock stuff , i mean if you try to hack someone that is living in germany , and you are in italy there's a high risk of the account being blocked due to different region ? And if 2FA is enabled it's dead ?

Yes, you can still target the account with their username. You will need to figure out your own solution to getting into the account, all my tool does is help you get the password.

Is this just a program to bruteforce into Facebook accounts? Or does it involve social engineering in any form? I mean lets be real, I don't expect it to hack "any facebook account."

The malicious accounts going around, doing fake give aways and shit that just infect people's computer to use their account to further spread their RAT, or whatever they use would be my targets. Would this whitehat approach/use for this be worth buying it?

Just letting everyone know on this thread that this program doesn't work. I've purchased and tested before, please don't waste your money on this. Facebook will lock the desired account you're trying to crack rendering the program useless.

I would love someone to produce a video of this program actually cracking a real Facebook account ?

same question here,
not clear enough

lynakouba - February 21, 2022, 12:16 pm

hacking a facebook account in 5 seconds ? that's sounds veeeeeeeeery suspect....sorry

SIM-4613211 - March 3, 2022, 3:52 am

I'm sorry, but that sounds too op to be true

Florin22 - March 3, 2022, 1:08 pm

Thank you so much! Helps a lot

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
