Thread: [\[TUT\] Spreading Method #3](#)

YayHar - May 14, 2016, 7:09 pm

Closing these. Reevaluating my time.

?Synapse - May 14, 2016, 7:13 pm

Very useful tutorial and the method as well as OP have my full vouch. Thanks for this!

Niko - May 14, 2016, 7:15 pm

Nice TuT, but rip all the kids that get caught.

Prawnster - May 14, 2016, 7:47 pm

(May 14, 2016 07:15 PM)Niko Wrote: [\[CITE\]](#) Nice TuT, but rip all the kids that get caught.

Just wondering, how would they catch you?

If you had everything spoofed and was running a VPN or something?

YayHar - May 14, 2016, 7:48 pm

When you infect school computers, they take it as a government offense, since it's technically government computers.

Silent Uprising - May 14, 2016, 7:51 pm

www.not-a-virus.com. Lol. And nice tut btw. Don't think it would work because alot of the IT people(at least at my school) have basic security knowledge.

GrandpaSherman - May 14, 2016, 7:52 pm

What happened to the glory days of ddosing schools?

Punisher - May 14, 2016, 7:54 pm

This is a good way to get expelled from school and possibly arrested.

One time I use a .BAT file to send a file to every network connected computer in the school district, the school IT guy was able to trace it back to the computer I used in the school, and they called the room and wouldn't let anyone leave until someone confessed.

Long story short, I got expelled for the year.

Remember kids: EDUCATIONAL PURPOSES ONLY

#Skyline - May 14, 2016, 8:11 pm

The school website would have to be coded poorly to have there emails displayed within the html tags of the site.

So this method would of work if the emails are within the html page.

If the contact form sends a POST request, like most contact forms do, then this method will not work.

MrNacho123 - May 14, 2016, 8:21 pm

Holy shit this is genius! I would never do this, but damn this method would be worth buying IMO. Thanks for the thread OP :)

GrandpaSherman - May 14, 2016, 8:32 pm

If the contact form sends a POST request, like most contact forms do, then this method will not work.

Most schools have the emails public on the site. And if they don't they usually rock a mailto:

Was thinking that myself, but again, most schools now have a listing of staff contacts as well.

Id highly suggest using VPN or proxy connectivity when spoofing, dont forget email headers log originating IP#'s

Thanks for clarifying simple terminology.

Although I was talking about if the contact form uses a PHP script to send the POST data as an email, you wouldn't be able to find there emails as PHP is server sided.

HiddenEye - May 14, 2016, 11:01 pm

^ Likely the bst truth in this thread lol

kpown - May 15, 2016, 12:31 am

Nice tutorial OP, I will be showing many people this!

Infinite power - May 15, 2016, 12:42 am

Nice tutorial on how to go to jail OP

Purple Kief - May 15, 2016, 1:33 am

As much as I appreciate another free spreading method, this is going to cost a lot of kids A LOT of money and possibly some jailtime.

Maybe add an extra disclaimer at the top as to the risks of doing this.

Aside from that, great job dude. ?

Vatnik - May 15, 2016, 6:11 am

how does the email spoofer work? I didn't understand that part...

YayHar - May 15, 2016, 6:53 am

(May 15, 2016 06:11 AM)Vatnik Wrote: [\[CITE\]](#) how does the email spoofer work? I didn't understand that part...

I'm sure Neos07 can elaborate more ;D

sk0rg3 - May 21, 2016, 12:37 pm

Fucking amazing, keep up the good work man,like you always do

YayHar - May 26, 2016, 6:20 pm

YayHar - May 29, 2016, 7:48 am

I want people to spin this and tell me how it works!

Wireless Network - May 29, 2016, 7:55 am

I was thinking, for a while now, to do the fucking same thing, not for my school tho, but something similar.

visfinity - June 5, 2016, 2:40 am

Do you think this spreading method will work ?

Quux - June 5, 2016, 2:42 am

I would never do this, RIP to all the kids that get caught lol.

but seriously that's a sweet method!

YayHar - June 18, 2016, 2:58 pm

(Jun 5, 2016 02:40 AM)visfinity Wrote: [\[CITE\]](#) Do you think this spreading method will work ? It should to be honest. Do not try, though

That is the thing I don't like about this method, VERY risky.

YayHar - July 9, 2016, 5:54 am

Update: offering support on these methods

ONURIS - July 9, 2016, 6:40 am

Xing - July 18, 2016, 4:43 am

Thanks for sharing this and good luck to all the kids trying it out.

(May 14, 2016 09:58 PM)#Skyline? Wrote: [\[CITE\]](#) Thanks for clarifying simple terminology.

Although I was talking about if the contact form uses a PHP script to send the POST data as an email, you wouldn't be able to find there emails as PHP is server sided.

If they have a contact form send them an email so that when they reply you will get the email of whoever is in charge of the contact form, Then S.E the person that replied into sending you a list of all their stuff's email addresses, do it in a smart way and you will most definitely pull it off well.

YayHar - July 18, 2016, 6:38 pm
