Thread: [rat server needs to be executed again after restart](#)

Backpack-Rucksack - May 15, 2016, 2:28 pm

Hello,

I am having a problem that bothers for a few days now.

I am crypting my file, run it on different OS on Virtual Machine, but always after the restart I have to run the file again. What I mean by that is, when I restart the VM, so the OS on which the crypted file was executed on, it asks me to run again, so just like when I downloaded the file the first time on the VM and doubleclicked it, I hope you know what I mean.

This small windows that pops up, that asks you if you want to acutally run the file or not. I definitely have activated startup on crypter, and deactivated on rat itself. Sometimes it works then on Windows 7 VM, but then not on windows 10.

When it's working on windows 10 then its not working on Windows 7.

I would be very thankful if someone could help me out. I'll give the one who can help me a 10 Dollar reward.

From the sounds of it it's UAC thats giving you problems. Your program is trying to elevate itself to admin rights and the UAC settings make it require a popup.

Avira - May 15, 2016, 8:57 pm

If your crypter has a bypass / disable UAC option select that and rebuild.

Otherwise disable HCKU startup
