Thread: [\[VB NET\] copy text from a first richtextbox another richtextbox the 2nd form ?](#)

Kulls - May 16, 2016, 9:18 am

hello,

I would like, how to copy a richtextbox my first form to a form in a 2nd richtextbox ?

Thanks. Great !

Kulls

(May 16, 2016 09:20 AM)PH?x Wrote: [\[CITE\]](#) Something like this?

```
richTextBox1.Text = form1.richTextBox1.Text;
```

This should work just fine.

Just use Property or Events,

exposing controls to the outside isnt a good way.

Kulls - May 16, 2016, 9:39 am

I can not. I tried to put this into a timer.

It's good I got there !?

Thank you very much guys !?

C# is a OOP Language try to learn about Classes,Property.....

It will open your eyes :)

That's kind of off-topic. Lol. VB.NET is an OOP language as well.

No shit sherlock didnt know that. I told him to use properties or events for his Problem since its the proper way to do it.

Member controls are public by default, what you suggest is a more Java approach.

Why be an ass? You suggested C# yet he asked for help with VB.NET?

Its a Object oriented approach :) having a class with properties would be the common way, or a event with custom EventArgs to pass parameters.

Would you show me an example on how you'd do it through encapsulation & events? Dot notation is OO already.

```
richTextBox1.Text = form1.richTextBox1.Text;
```

```
richTextBox1.Text = form1.richTextBox1.Text; ,,,,
```
