Thread: [Last Gauth/2FA Validation Under "Trust Scan" Inaccurate](#)

Grohl - May 17, 2016, 3:21 pm

I've signed into my 2FA a few times over the past few months and it still says "Never" for Last Gauth/2FA Validation on the "Trust Scan" page. I even did it just now and it still says "Never" -- I'm assuming this is a bug?

R2-D2 - May 17, 2016, 3:28 pm

go here <https://hackforums.net/gauth.php> and enter your gauth code and click validate code. It should update then. If you have already done this sorryyy. Might be a bug.

It does work indeed. My trust scan was also saying that I've never validated my GAuth code but after trying this, it displays the correct date.

Leroy Jethro Gibbs - May 17, 2016, 7:14 pm

The last validation is intended for someone to verify their account during deals etc. You use the gauth.php page to insert your authy code and update your last validated date.
