Some more basics tutorials of Metasploit- by Spirit

Hello Guys,

My name is Spirited wolf and today i am here to share my some nooby tutorial's of Metasploit Black Hat

So, first thing is what is Metasploit?

->So, my answer will be Metasploit Framework is a open source penetration tool used for developing and executing exploit code against a remote target machine it, Metasploit framework has the world's largest database of public, tested exploits. In simple words, Metasploit can be used to test the Vulnerability of computer systems in order to protect them and on the other hand it can also be used to break into remote systems.

Its a powerful tool used for penetration testing. Learning to work with metasploit needs a lot of efforts and time. Ofcourse to can learn metasploit overnight, it needs lots of practice and patience.

So, here you go the :drinks: Cheerz...

I think no one is interested ?

Mr. Robot - May 20, 2016, 8:53 pm

I'll message you in a few days with a list of tools for you to look into.

You are definitely on the right track but I think you have a fair bit more to learn - Really appreciate what you are trying to do!
