Thread: [Bypass Email Providers & Email Hawkeye Keylogger - PLS HELP](#)

Redshadow - May 21, 2016, 12:01 am

Hi everyone

I am new to emailing keylogger, please don't be offended by my question. I just finished compiling HawkEye keylogger and I used LazerCrypter to FUD it only for me to be stopped by free email providers like gmail, webmail... etc from sending out my compiled keylogger because the email provider detected it as a virus.

My question is; "How Do You Bypass Email Providers And Email Hawkeye Keylogger?"

Thank you for reading, please leave a reply

VisualSoft - May 21, 2016, 4:56 am

You wont be able to email directly any logger, get some doc exploit or any other kind of exploit to send it over email.

Can you direct me on where I can get some doc exploit or any other kind of exploit to send it over email? Thank you

All email providers work to stop ANY .exe from being sent over email.

Your best bet would be either a doc exploit as stated above or uploading to a file sharing site.

CasinoExploit - July 3, 2016, 9:50 am

It is really easy to bypass GMAIL :P

DamienVC - July 3, 2016, 1:37 pm

You will need a FUD doc/xls/pdf/etc exploit.

DOC is the most common, macro also works.

I do not agree;)

Erich Himmler - August 17, 2016, 2:30 pm

Most popular email providers will block the sending of .exe files. Why not just email them with a link to download the exe?
