Thread: [How to kick people off your WiFi Network - Deauthentication Attack](#)

Decim - May 21, 2016, 6:50 am

Hello.

This video teaches you how to kick people off a wireless network by performing a deauthentication attack using the aircrack suite.

I have written a simple interface for Aircrack which makes this process a whole lot easier.

You can find it here: <http://www.wastedwolf.com/2016/05/aircrack-deauth-frontend-kick-people.html>

[Video: <https://www.youtube.com/watch?v=b7P9YCjNsaQ>]

If you enjoyed the video, be sure to smash that like button.

Also feel free to check out my other videos.

Looks pretty HQ. Thanks!

Is this the same as using "wifikill" on android?

L33tness - May 21, 2016, 1:08 pm

Great tutorial! I believe wifi kill is very similar, but it isnt the same if im not mistaken. But non the less, wifi kill will do the trick aswell.

Glad you liked it.

WiFi Kill uses some kind of an ARP spoofing attack.

You basically fool all the devices in the network into thinking that your phone is the router so all the traffic gets routed through it. Then you simply drop the packets from the target devices.

In this tutorial, we make use of deauth packets which basically make a device reauthenticate itself on the network. When we flood the device with deauth packets, it will never stop reconnecting -- essentially having the device kicked off of the network.

Ahh i see! Thanks for the tutorial and knowledge! ?

RainSpider3000 - May 21, 2016, 9:56 pm

Great for pranking people. These kind of attacks always make me happy.

Killa Priest - May 21, 2016, 10:06 pm

Nice work bruh. Easy shit. Thanks!

You can also use this if someone is downloading something and refuse to stop.

kristijan97 - May 23, 2016, 7:47 am

(g)old

but still very cool trick

Wow, nice tut sub your channel and give you some +rep ?

NinjaLeaks - May 24, 2016, 5:07 pm

Thanks for the tutorial op! Great content and well put!

Cheers

Kazumo - May 24, 2016, 5:37 pm

Just got Kali tonight and really wanted to try something out with it, your tutorial seems a great start.

Thanks a lot!
