Thread: [Booter source not sending attack\(Shell\)](#)

clarkycal - May 21, 2016, 4:46 pm

Hi guys i have put together a booter with 271 private shells.
the shells work fine on there own but within the booter source they don't do anything!
For example if i try and boot an ip for example using 1 shell it works.
BUT if i try using my web booter nothing happens?

The web source im using is : "Prodigy's Source Mass Shell Adder by Natha"

As seen in this quote there are get shells online.

Shells Statistics
Shell Rotation (On)
Shells Online 271
GET Shells 271
POST Shells 0
Slowloris Shells 0

????????????????????
Any ideas what the problem could be?

thanks. ?

Its okay, reputation means nothing of me nor does it change my competency.

Proxseas - May 21, 2016, 5:24 pm

You realize, you're literally sending a GET request to 270 shells right?

@Proxseas can you elaborate?
So they should be in "Post" Instead?
