Thread: [Change your MAC Address in Windows 7/Vista](#)

Frankey - May 22, 2016, 9:14 am

Before we start with this really HQ tutorial I want to say a few things. I do not know if this works. I found this on another forum, and I'm basically reposting it but then in English. I'm bored so dont blame me.
Now that I said that; have fun with the method!

Content:

Why?

How to know your current MAC address.

How to change your MAC address

F.A.Q.

1. Why?

Why should you want to change your MAC address? Simple, to be more anonymous. A MAC Address is a unique string which is only for your network adapter. So, if you want to hack a network you are required to send packages where your MAC address is included. This is of course easy to trace, this is basically why you should want to change your MAC address.

2. How to know your current MAC address.

To get to know your current MAC address is really easy, and can be done with some easy steps.
Open CMD

Type: "Getmac" (without the "")

There will be a list with all the network adapters and with the the MAC addresses.

3. Change the MAC address.

Now that we have our current MAC address, it is time to change it.

Go to your Network and Sharing center.

Click on "Change Adapter Settings"

Rightmouseclick on your Network Adapter and click on properties.

Click on configure and go to the "advanced" tab.

Now click on your network address.

Right now there is a circle at "Not Present" change this to the empty field.

Now enter your new MAC address.

Click on OK. (Your Network adapter will reset now, this can take some minutes.

Now open your CMD again, and enter "Getmac" and see if it works.

Quote: Now you have your new MAC address.

4. F.A.Q.

Q: After I followed your tutorial my internet doesn't work anymore!

A: The main reason for this is that you probably have MAC address protection enabled on your router. Look if you can disable it, it might solve the problem.

Q: I want to get back to my main address. How do I do that?

A: Follow the steps 1 - 5 and click on "not present".

Have fun with your new MAC address, tell me if it works for you!! Again, I did not make this. I only translated it! All credits go to the official author.

Or you could use TMac Changer.

I'd link it but my account doesn't have permission. Search online for "Technitium Mac Address Changer"

I dont see the Point for instelling a program, if you can Just do it manually with this tutorial. Still thanks for the showing it, might be usefull for People that dont know how to do it manual, or Are Just lazy.

LividandGifted - May 26, 2016, 9:24 am

No problem, thanks also for sharing your method :)

"might be usefull for People that dont know how to do it manual, or Are Just lazy. "

I'm definitely part of the lazy group :D

If I can do it with a few clicks instead of a whole process, why not?

Cheers for the tutorial, it's well written :)
