Thread: [Pc slow - Download Speed low - I think I got infected](#)

Klima - May 22, 2016, 6:26 pm

Hey,
Few days ago, my Pc was really fine and there was no internet speed problem or lagging but since today especialy, while trying to download a program, I saw that my download speed was really slow. After that, during all the day, my internet navigation was still really bad. On my speedtest : I got 0,72 Mb/s for download, 6,51 Mb/s for upload for a 15 ping.

I think I got infected by a RAT or something like that, If someone can help me, It would be appreciated.
Have a good day!

(May 19, 2016 10:15 PM)ProtectNull™ Wrote: [\[CITE\]](#) Hello I am here to assist you,

Please read these before we start with the procedures,
Please do not follow any other instructions other than mine, as they can cause conflict between my fixes.

Please be patient, as you can see I have other people to assist.
Please consider backing up any important files incase, (usually I will create System Restore Points if needed)
Please read the instructions carefully, as it can help a lot.
Do not login to valuable sites such as banking etc.

 Please download [Junkware Removal Tool](#) to your desktop.

Shut down your protection software now to avoid potential conflicts.
Run the tool by double-clicking it. If you are using Windows Vista, 7, or 8; instead of double-clicking, right-mouse click JRT.exe and select "Run as Administrator".
The tool will open and start scanning your system.
Please be patient as this can take a while to complete depending on your system's specifications.
On completion, a log (JRT.txt) is saved to your desktop and will automatically open.
Post the contents of JRT.txt into your next message.
Download this here [AdwCleaner](#)
Double click on AdwCleaner.exe to run the tool.
Click on the Scan button.
When it's done you'll see: Pending: Please uncheck elements you don't want removed.
Now click on the Report button...a logfile (AdwCleaner[R0].txt) will open in Notepad for review.
Look over the log especially under Files/Folders for any program you want to save.
If there's a program you may want to save, just uncheck it from AdwCleaner.
If you're not sure, post the log for review in pastebin.com and paste link in next reply.
If you're ready to clean it all up, click the Clean button.
After rebooting, a logfile report (AdwCleaner[S0].txt) will open automatically.
Copy and paste the contents of that logfile in your next reply.
A copy of that logfile will also be saved in the C:\AdwCleaner folder.

I personally dont think that its a rat but ur ISP limiting u cuz ur possibly downloading to much in ur household or alike (Using up bandwidth)

The above guy is much more experienced then i am in this but u can also do this:

1. Install Eset anti virus
2. install malware bytes
3. Get herd protect
4. install key scrambler

Super useful on any fresh installation and just as useful when having a virus or a rat.

I hope i helped just a little bit ?
