Thread: [Ettercap at school \[2k+ hosts\]](#)

K!ngGFX - May 24, 2016, 8:38 am

Hello, Im at school and would like to use ettercap on kalilinux... unfortunately, i have no clue how to utilize this tool. I have over 2000 hosts on my host list after scan. What can i do? My main goal would be to do some arp poisoning and sniffing

SIM-2583123 - May 24, 2016, 11:31 am

I was trying to do the same thing.. No luck D;

vieze_piemel - May 24, 2016, 1:21 pm

Do you think it's impossible for your school to have 2000 devices?

In the past i have tried several times to sniff some data at school, but they ran a port scan blocker which displayed all possible ip's from the DHCP pool as an active host. So it could be a port scan block...

Anyway, you could also try to sniff ALL of them. if there are really 2000 devices you are slowing the internet down like crap, because everything goes through you, lol. Do you also need an basic tutorial on sniffing with ettercap?

You're coming to the wrong place to ask how to use it.

Please don't try and "hack" anything related to your school.

It can only end badly for you

nullphreak - June 19, 2016, 2:03 am

Have a look at mitmproxy & mitmf, this will allow you to modify traffic at the same time as well as backdoor exe's downloaded over the net.
