Thread: [\[Self Made\] Facebook Game "H4ck" for CPA \[Test Project\]](#)

TheVBScripter - May 24, 2016, 10:45 am

Today is the first day in 2 years that I've programmed again for CPA!

Question I got is:

Could you give some feedback about my new "Slotomania Hack"?

What did I make? This:

normal [\(Click to View\)](#)

Here is a Screenshot of the program when it's "loading"...

loading/running [\(Click to View\)](#)

Here is a Screenshot of the program when it's "done"...

done/added coins [\(Click to View\)](#)

The "2nd form" (the "coins have been added" screen) was made FAST and is LQ!

I only added that form, because I was testing a few codes that seemed to be not working..

What does it do? Nothing illegal!

It's ONLY for CPA (PPI) related purposes.

I'll record myself "using" it + use Photoshop to edit proof and then it's all ready to be uploaded!

I'm a bit tired (didn't slept much tonight ?).

I'll record it tomorrow, how it's all working and such!

Especially since I "rushed" my 2nd form to get it finished, because I wanted to test a few "codes" today that I had some issues with.

Here is a short list of "things" that I added to my H4ck to make it look "HQ" as some people would call it.header of my niche (cropped it a bit)

"Click To Start" Button becomes a "Connect First!" Button (to make sure you connect first, before you "h4ck")

a small progress bar to "load" the connection with

Connection details (my example: iPhone 6 with iOS8 and "version" V.1.05.3 as hack)

ONLY numbers are accepted in the textbox ("enter coins")

Percentages when the big progressbar is loading

"Loading" text like "Connecting to Slotomania Database.." (looks real)

Increments decrease / increase at a certain % level (so it looks like it's really loading something)

A 2nd "screen" (form) which shows How many coins have been added (after 100% loading)

More will be noticable after I recorded the "h4ck"

Another question for you guys is:

Do you got experience with creating/using "h4cks" for CPA?

I spent more time at it than I expected, but yeah... 2 years without programming and this is my first project, not bad right?

What I did with my "CPA time" 2 years ago: New youtube accounts, New Blogger/Domains designing, programmed new hacks, filmed those + photoshop for proof & investing to boost/rank my videos and/or websites.

Anyway, it's now time to take a shower and relax a bit..

Have a nice day / evening further & please leave some feedback! ?

P.S. For those who think I didn't programmed this, just PM me and I show you proof tomorrow (going @myphone now)?

Crocs - May 25, 2016, 3:33 am

Not trying to be a douche but why do you people make .exe's for CPA? I don't have statistics but I'm sure that people would rather do a survey on a WEBSITE hack instead of doing a survey to download and run a .exe that might as well be a virus.

Also, is there anything else on it other than forms, buttons and a progress bar?

Good job I guess.

I like your enthusiasm though, look into web developing instead.

You can use other landing pages and just edit them to your specific niche, quite easy to do.

Omoi - May 25, 2016, 3:36 am

You could also backdoor this and infect kids well making money from CPA just saying.

You can use other landing pages and just edit them to your specific niche, quite easy to do.Indeed, but since I can adjust those .exe files pretty easy and create a page on a multi-niche website where I show my "hacks" as download. My visitors see on every page the same layout, just a different hack. Which is better performing (in my previous experiences) than a seperate domain per niche attached to an "online hack".

Thanks for the tip tho, but I thought about it. It's not my first day with CPA & it's PART of a test project. I'm not going to earn with only "hacks" that would be too simple (simple like not working, not ment as easy to do). Thanks anyway! ?

(May 25, 2016 03:36 AM)Mavis Vermillion Wrote: [\[CITE\]](#) You could also backdoor this and infect kids well making money from CPA just saying.I know, but I rather work whitehat, especially since it was working well the last time (2 years ago, but yeah).

I rather earn \$500-\$1000 a month with only a few CPA sites than hack people and got to worry about things that are costing more issues than money in the end (I think).

I thought of that when I had my "hacking" period, because I was pretty well with Cybergate and such, I felt like a "hacker"...

Anyway, hacking/infecting isn't worth it anymore, just wanted to practise my VB skills again + a new start with CPA ?

K4rMa - May 25, 2016, 4:57 am

I used to make good money from Slotomania before 3 years lol!

.Bux - May 25, 2016, 5:26 am

Yeah fake programs are fun, I used to make tons of it, but the thing is that people would rather use a generator inpage than download a hack (cuz people are paranoid)

I've switched from download locker to a fake generator landing page, and people complete way more offers with the generator locker!

<https://hackforums.net/showthread.php?tid=3835541> Haha I see! It's still 1 of the most played Casino games, that's why I picked that one ? Nice to see that I'm not the only one who used that niche before!

I've switched from download locker to a fake generator landing page, and people complete way more offers with the generator locker!! I know haha, I never said that this will be my ONLY traffic/method for CPA. I just wanted to say that these programs are ONLY for CPA (not for hacking, infecting, debug tests, or anything). Only CPA, but my CPA won't only be these hacks ?

K4rMa - May 25, 2016, 5:33 am

Thanks, didn't know that.

I'm not working with CPA now (need to finish 2 other projects unfortunately) and then I'll get back to that!

Anyway, about your CPA knowledge.. Why do you target AUST players instead of FR? FR Pins are nice as well as pins from CH, so I'm just curious why ?

Because Australia also have some high paying pins above 7\$ and didnt had to optimize the landing to their language.

I know, but FR as well. I just don't know how to target Australia with my traffic.

It's just English (international traffic), that's why I prefer FR/NL/BE/GE/CH ?

IceRolex - May 26, 2016, 1:25 pm

Sorry brah but that's so 2013, every is hosting online hacks now but that's even getting quite old

True that. I figured that as well when I spoke to other CPA guys and it's good now ?

Closing this thread, it was a nice practise again but that's it for now ?
