Thread: [Recovering stolen laptop through IP address](#)

Mafiagal - May 24, 2016, 7:32 pm

Hi everyone, this is my first post on this board.

While I'm interested in learning hacking, I have a more pressing issue to tend to at this time. A former neighbor stole my Macbook Pro. He moved out 2 weeks after I notified them the police would be conducting an investigation and interrogating everyone. So he literally flew off the scene.

Two days after the Mac was stolen, my gmail account showed a connection from a specific IP. I went to the police and filed a police report, but they're saying that they can only provide personal information about an IP if we're talking about a serious offense such as murder, terrorism, etc. Not theft. I'm outside of the US, so it might be different where you are.

My question here is: Is there a way to actually find it on my own through that IP address? I know who the person is, but since he moved overnight, I don't know where he is. I do have ways to find him, but then it would be incredibly difficult to prove he has the Mac.

The police said that if I was able to catch the person with the Mac, they could arrest him.

I'm hoping you guys can help me ? I can't afford another laptop right at this time and I really need it. I'd appreciate any info you could provide on this matter.

Thanks! ?

?hoenix - May 24, 2016, 8:01 pm

Yes, it's possible if you have the right set of skills. I have a good chance of finding their location and address if you can provide me the IP address.

Mafiagal - May 24, 2016, 8:07 pm

Thank you so much, how would I go about giving you the info? I have only posted once, so I don't have the right to PM, can I just post it on here? Is it safe to do so?

?hoenix - May 24, 2016, 8:41 pm

Mafiagal - May 24, 2016, 8:44 pm

And then what follows? You will post the exact address on this forum too?

?hoenix - May 25, 2016, 4:38 am

(May 24, 2016 08:44 PM)Mafiagal Wrote: [\[CITE\]](#) And then what follows? You will post the exact address on this forum too?I'll be forced to send any information I find on this forum, unless you provide me with your Skype username in your next post.

Mafiagal - May 25, 2016, 7:58 am

My gmail ID is youkebe1, can we take it outside of this forum? I would not want to publicly give out

that person's info. Thanks for helping.

?hoenix - May 25, 2016, 5:35 pm

(May 25, 2016 07:58 AM)Mafiagal Wrote: [\[CITE\]](#) My gmail ID is youkebe1, can we take it outside of this forum? I would not want to publicly give out that person's info. Thanks for helping. I'm not going to communicate through gmail. Provide me a Skype username if you want me to help.

Mafiagal - May 25, 2016, 7:56 pm

Ok, in Skype you can find me as mafiagal7. I look forward to your message. Thanks.

SloppyCode - May 25, 2016, 8:02 pm

It's impossible to track from an IP address because geo locations aren't accurate.

?hoenix - May 25, 2016, 8:05 pm

(May 25, 2016 08:02 PM)SloppyCode Wrote: [\[CITE\]](#) It's impossible to track from an IP address because geo locations aren't accurate. There are multiple ways to obtain someones full name, street address and even social security number just from an IP address alone.

Don't bother commenting on a thread if you have no knowledge in the area.

You're acting like you can obtain all that from an IP address, when in reality you would need to call up the ISP to get that stuff.

?hoenix - May 26, 2016, 4:30 am

(May 26, 2016 03:19 AM)yeslamAbacon Wrote: [\[CITE\]](#) You're acting like you can obtain all that from an IP address, when in reality you would need to call up the ISP to get that stuff. No.. Like I said there are MULTIPLE ways of obtaining all that from just an IP address. You just need to know the proper methods and have the experience.

Not sure why you're trying to tell correct me on something concerning a field that I've been dealing with for over four years. Like I told the previous member, don't bother trying to help in this section if you have no clue what you're talking about.

7 - May 26, 2016, 4:35 am

If i was new to the forum with this problem, I would be glad to be assisted by Shade -- Sometimes people need to back down on shit they know nothing about.

Keep up the good work Shade

Cimex - May 26, 2016, 10:43 am

(May 26, 2016 03:19 AM)yeslamAbacon Wrote: [\[CITE\]](#) You're acting like you can obtain all that from an IP address, when in reality you would need to call up the ISP to get that stuff.

Right okay, and so the end result is you still get the information from a starting point (IP address only in this case), therefore still is a method in getting that information.

The OP didn't ask for a "Type IP in this program and an address pops up" if shit was that simple then jeez, hit me up.

Edit: Possible I know, but not really publicly available, more secretive ?

SkinX - May 26, 2016, 10:51 am

(May 26, 2016 03:19 AM)yeslamAbacon Wrote: [\[CITE\]](#) You're acting like you can obtain all that from an IP address, when in reality you would need to call up the ISP to get that stuff.
You're wrong on so many levels. Maybe you should learn about things like this.

Agonises - May 26, 2016, 11:02 am

Not really, using Marketing data that contain IPS is an alternative to ISP doxing.

Dauntless - May 26, 2016, 11:06 am

You can always use DBs if you want.

Agonises - May 26, 2016, 11:07 am

(May 26, 2016 11:06 AM)Dauntless Wrote: [\[CITE\]](#) You can always use DBs if you want.
That too is unreliable, especially if the Ip assignment to that person is dynamic. Even if you get a database result you'll also need to verify that it's infact that person.

?Optimal - May 26, 2016, 11:07 am

GEO Location's aren't accurate plus possible VPN?

Cimex - May 26, 2016, 11:17 am

(May 26, 2016 11:07 AM)LeOptimal Wrote: [\[CITE\]](#) GEO Location's aren't accurate plus possible VPN?

If you think outside the box there are still methods to trace the VPN IP address back to an actual alias, where you can proceed to find the actual IP address of the target.

Mafiagal - May 27, 2016, 7:41 am

I added you on Skype, Shade. Whenever you're ready, thanks in advance.

Mafiagal - May 31, 2016, 7:59 pm

If anybody else here knows how to do this, I'd really appreciate your help. Please contact me through Skype.

Zayzo - May 31, 2016, 9:00 pm

Noone here can track down any information regarding an IP. They would have already, if they offered. Quit wasting your time Mafiagal.

I can do this, but it will cost you.

Agonises - June 1, 2016, 1:39 am

You've not provided any information regarding the IP Address;

In terms of attaining information through online methods:

Did it show up with the Mac Address in the "Connections" window of GMAIL. If it's the same as your MAC Address, therefore meaning he logged in using your Laptop.

Do a simple WHOIS of the ip address, if no Mac address is present. Take a little look, google it. See if it has a dynamic or static IP assignment.

Google the Ip address.

In terms of In real life methods:

You stated you don't know where he lives - If he has a CAR, and you're aware of the number plate. Drive around and try to find it?

If you know the name of the individual "A former neighbor " (Or reverse look it up with the address). Try searching him on social medias, maybe twitter - where he has tagged his location. Check if he has a picture of a mac (potentially yours) any of his photos.

If you can't find anything, or are just bog standard lazy. Go order a Doxing service.

Mafiagal - June 1, 2016, 8:31 am

Well, you haven't been here that long either, have you? How do you know nobody here can actually hack well? The first person who wrote to me turned out to be a fraud who just said he'd "do the job" and then got all pissy when I asked him if there were any updates after 72hrs. But he's not the only one here, I'm hoping someone can give me at least a hint to get this done.

Nymphomaniac - June 1, 2016, 3:48 pm
If you pm me the IP I will find him

libc - June 1, 2016, 4:43 pm

Umm I've been around this forum since 2012. No one and I mean no one who is currently an active member here is considered to be a skilled hacker.

This forum actually did have a few skilled members at one time but they were either banned or left because they were tired of putting up with everyone's stupidity.

The discussion boards where highly capable hackers intermingle don't let people like you in. They are closely guarded and don't offer open registration like this forum does.

To become a member, you either need to prove your skills or know someone who is a reputable associate of the website. These types of forums don't turn up on the first page of Google.

Too bad you're still not going to get the information you need. Being "nice and helpful" won't get the job done.

(Jun 2, 2016 12:31 PM)Mafiagal Wrote: [\[CITE\]](#) And it's pathetic you can't even tell what racist means, how can you even hack or code if you can't grasp meanings of ordinary English language? Since you obviously don't understand what racist means, here's Google's definition.

noun

a person who believes that a particular race is superior to another.

adjective

having or showing the belief that a particular race is superior to another.

Now here's what I said:

Quote: You have the technical skills of an uneducated African.

Did I assert that my ethnicity (or any other ethnicity for that matter) is better/superior to the African ethnicity? No.

I merely said that you have the technical skills equivalent to that of an African person who lacks an education.

And based off your lackluster critical thinking skills, I'd estimate your IQ to be roughly equivalent to that of a person with an intellectual disability (which is nothing to be ashamed of!).

I need to stop arguing with you. I feel bad. At this point it's like dunking on a kid in a wheelchair.

afrckenway76 - June 4, 2016, 6:19 am

Holy shit guys, come on. OP remember 5 distinct steps here. Reconnaissance, Enumeration, Gaining access, Maintaining access, Covering tracks. You shouldn't need to cover your tracks on your own device, but never rule it out. Gain access to your system, poke around to see if you can't find anything. An address, phone number, etc. to help you in your search. By the time you get in, his stuff will probably be logged in and your stuff out. IF that IP is still valid.

Scan the network. In the event you goof'd and gained access to the wrong PC scanning the network as the PC you're on might yield an Apple device with a matching MAC. Follow the 5 steps. If you use Google and some advice from friends here you shouldn't have an issue gaining access to your system and putting some software on it. The goal is to get it back, but every step of help is a step in the right direction. If you sift through logs and see nmd wmt/whatever chances are he's logging in at public access centers. Things like this will help you following the trail.

I'm sure other people would have some better ideas on how to go about this, but I didn't spot any sorting through 5 pages of rage posts

Edit: in the event he sold it, you might have luck poking around places that don't require signing forms for sales. The EU equivalent of flea markets and the like would be a good start

I can do this, but it will cost you.

Are you implying you're the only one in the section which can get information from an IP-address?

(May 26, 2016 11:02 AM)Agonises Wrote: [\[CITE\]](#) Not really, using Marketing data that contain IPS is an alternative to ISP doxing.

Correct, if you got a contact web that is stretching to marketers (especially targeted advertising) etc you can build a very descriptive profile of a target with an IP.

Potentially survey administrators as well, but I can think that success-rate isn't very good.

Everyone knows how to ISP dox rofl

Mafiagal - June 6, 2016, 2:07 pm

If anyone of you can do this, we can make a deal. I had several people write to me, but some are

taking too long to respond and another one didn't seem very legit, so I'm still open to negotiate. Contact me through Skype, mafiagal7.

Thanks.

User216 - June 7, 2016, 1:37 pm

Depends, about the user and kind of ip , If its static , Then your lucky wait a few weeks , till the user gets a skype , of some sort , then ip to skype , And report the skype to police , then its quite easy to get it back . if he has a dynamic ip you will need some sort of Skills that can't be aquired by only masters .

libc - June 7, 2016, 3:42 pm

The IP address' DHCP assignment has no significance.

Agonises - June 8, 2016, 8:52 am

(Jun 7, 2016 03:42 PM)libc Wrote: [\[CITE\]](#) The IP address' DHCP assignment has no significance. Well it does.

If the Ip address used to connect to the Gmail account is static, it's more easier to attain PERSONAL information, as oppose to a dynamic ip assignment.

What's not to say:

The person who logged into the Gmail account is registered on any recent data breaches, be it Mate1, Zoosk, Myspace etc.

The person who logged into the Gmail account is in any harvested marketing data

The person who logged into the gmail account has the same Ip address indexed into google, possibly a pastebin etc.

What's not to say he has the same Ip address for XX years, and you reverse look it up on whitepages that register the Ip address (yes, there is a particular white page that shows Ip address used only US based). Therefore meaning you find his address and information

And many more ideas/methods. As oppose to the person who hacked into the gmail account having a dynamic Ip assignment. A single Ip address that's dynamic in a dox doesn't contribute much, apart from knowing the individual's location (Town/City they reside in) at most.

?Criminal - June 8, 2016, 10:57 am

Libc is NOT MLT but he definitely knows his shit and @agonises in regards to DHCP tables, if you live in the same vicinity as your target you can theoretically keep ddosing his IP forcing the DHCP server to assign him a new IP eventually depending on if the ISP does it manually or a router reset regardless in some scenarios you can eventually assign your self the victims IP(I dub this technique "IP Fragmentation" but instead of allocating memory to a place in your favor your allocating the victims IP to your self in your favor couldn't think of a cooler term for it) and if the persons IP has previously been logged into a gmail you can abuse things such as the email recovery form to get an instant reset and other cool things that only work if your on the victims exact IP, gmails algorithm is pretty smart and it's not range based it only gives different options if it detects your the legit owner based on previous EXACT login IP's(can't be IP's in the same ASN range has to be EXACT) this has happened to me a few times but it's randomized it's not really an easy thing to do.Also if your referring to thatsthem thats ran by legit PI's that run their own firms.One of the co owners is also

from HF I believe but im not sure the sites only been around for a few years now circa 2014 I didn't even know of the sites existence, even seen a few emails linked to minor names and addys so theres a huge possibility they have access to harvested advertising company/marketing data/other third party data broker datasets w/ IPs as well. Reason I know is a guy whos email im referring to signed up for a site where you earn money for completing surveys(CPC I think there called forgot the name) these companys sell data to PI's in some cases which include addy and ip data. On topic if you installed a VNC/RDP daemon you can straight up remote into your computer just entering the IP address, port and RDP credentials you set up, since these daemons run as a background service similar to teamview they work as long as the computers turned on the person doesn't even need to be at the desktop even the lock screen is enough. A guy at defcon did exactly this and basically owned the thief he set up a network sniffer stole all his accounts leaked his chat logs embarrassed the thief. The presentation was titled something along the lines of pwned by the owner.

"You can abuse things such as the email recovery form to get an instant reset and other cool things that only work if your on the victims exact IP,"

You'd have to know the victim's email address, of which he doesn't know.

"keep ddosing his IP forcing the DHCP server to assign him a new IP eventually depending on if the ISP does it manually or a router reset regardless in some scenarios you can eventually assign your self the victims IP"

That would be next to impossible.

"so if your referring to thatsthem thats ran by legit PI's that run their own firms"
It's still a publicly accessible website. Which is useful.

"have access to harvested advertising company/marketing data/other third party data broker datasets w/ IPs as well"

I myself have access to probably more than 100 million harvested marketing data which I use. Not too sure why you included that into your reply.

"A guy at defcon did exactly this and basically owned the thief he set up a network sniffer stole all his accounts leaked his chat logs embarrassed the thief. The presentation was titled something along the lines of pwned by the owner."

Not ever heard of that particular defcon presentation. However the user who created this thread has no DIRECT CONNECTION to the individual, apart from his ip address and him logging into his gmail once.

It's a case by case basis doesn't always work for example iv'e gotton a gmail before because I happened to get assigned an IP the owner logged in to the gmail previously(in one case a guy happened to use [censored] IP's alot so by signing into [censored] I was able to hit the same IP used and gmail displays slightly different recovery options if your on a previous log in IP so you can do a manual fingerprint easy, I stumbled upon this technique awhile ago but its use case is severely limited and it's definitely not viable like you said its the luck of the draw just documented it for outside the box concept purposes I stumbled upon it completely by accident and documented everything) but gmails pretty secure aside from that little trick the only other known gmail techniques require user interaction as for the presentation thats if mafiagirl was prepared and set up VNC/RDP daemons prior, with just IP information she can possibly track down an email if someone does a DB lookup for her and do active recon such as spear phishing and other client side attacks to possibly gain foothold onto her computer again. But those are really the only things she can do not much else.

Agonises - June 8, 2016, 11:12 am

"she can possibly track down an email if someone does a DB lookup for her and do active recon such as spear phishing and other client side attacks to possibly gain foothold onto her computer again."

Which is only do-able, if that IP address is in a database. Which is unlikely, especially if the person who logged into the gmail account has a Dynamic IP assignment. Look at my above reply to LIBC.

Ah, I see you blatantly try to insult everyone. Pretty humorous actually, and MLT uses the alias libc quite often, so I made the assumption.

"Everyone knows how to ISP dox rofl." That's very incorrect, a majority of users on here cannot ISP Dox. Many people say they can, but when it comes down to it, no.

How do I know this? Well, as my doxing service got fairly big I had to hire another member to the team. Many people who claimed to know how to ISP dox in this section, and applied for the position, couldn't. In fact I tried out around 30 applicants, and none could ISP dox.

So in fact, that's a very incorrect statement that your assuming everyone can ISP Dox.

Many people here cannot. Don't be so ignorant.

You can't just RDP directly into a computer behind NAT from the outside. There needs to be a port forwarding rule for the RDP port on the router.

?Criminal - June 8, 2016, 1:46 pm

Generally when someone sets RDP up they have port forwarding enabled figured people already knew that by default.

Mafiagal - June 9, 2016, 7:55 pm

I have the email address of a person (a suspect) who is 99% likely to be the thief, would that help me locate the computer in any way?
