Thread: [Server settings to ddos?](#)

joepvand - May 25, 2016, 7:36 am

Hey, i got a linux server that im going to use to host ddos api.

Do i need to change any setting for it to work efficient?

Please let me know

yo if you add my skype i can help you!

Gargenmel - May 25, 2016, 9:29 am

ill help you out:

if you dont want to waste time with script built in and easy to manage and upload:

CENTOS:

Yum install httpd php -y

service iptables stop && service httpd restart

then upload this script to /var/www/html/api.php: [pastebin.com/m8FENkKF](#)

UBUNTU:

apt-get install apache2 php5 -y

service ufw stop && service apache2 restart

then upload this script to /var/www/html/api.php: [pastebin.com/m8FENkKF](#)

Spoofing way:
pastebin.com/iMhZC4Hw

Spoofing way:
pastebin.com/iMhZC4Hwayy i just uploaded your first script. What api key do i use?

Gargenmel - May 25, 2016, 11:42 am

You can change \$key on line 9 of the script, but the default is 123. Also its not Mine x)

You shouldn't be running an API if you don't know what server spoofing is.. ?

Added!

Asatru Valknut - May 26, 2016, 8:21 am

Of course, first you should probably get a basic understanding of the internet and how it works.

joepvand - May 27, 2016, 9:27 am

I still need a answer for this :)

What are your prices and specs?

Gargenmel - *May 27, 2016, 12:53 pm*

you're better off buying a sst or look @ v0dka's api shop
