Thread: [Find IP in telegram chat.](#)

hack3rcon - May 25, 2016, 9:52 am

Hello.

How can I find the IP address of someone in Telegram chat? Is it possible?

Tnx.

Try using a IP Link resolver.

Use an IP logger...

This link is the best IP logger imo. Fast, reliable, and even has the option to make your own account.

http : // grabify (dot) link/
[Remove the spaces in between the link.]

So, you basically type in a link where you want them to be directed to when they click the link you provide to them after it's been generated by the IP logger site. They click it, and it shows up in the IP history, or whatever... Good luck.

Can vouch for Grabify, will work perfectly

Why don't you use a resolver?
