Thread: [\[Bot Request\] Pocketdice.io Auto-play Bot](#)

permeableaxis5 - May 29, 2016, 9:22 am

Hello! There are many bots already for gambling sites and I am guessing they are not hard to make but since I do not know how to create them I am asking you to create a bot for me/the community.

The site it is gonna be for is Pocketdice.io , it's a BTC gambling site. The site already has an Auto-Play option but it is not good enough. The only thing you can choose is base bet, increase/decrease per loss/win. There is no other options.

- So I am requesting a bot that will have more options. The options that I would like to see is "reset to base bet after so many losses". This will make the auto betting more safer and will protect you from losing all your money.

- Another option that would be great is a "stick at 5th/or another bet". Let me explain how this would work: If you lost 5 times in a row, you could make it so that after the 5th bet it would stay at that amount, meaning even if you have a set "increase % after loss" it wouldn't increase and just stay at the 5th bet amount.

Those are the options that I would love to see in this bot. Please someone if you have time make a bot for this. The site is Pocketdice.io . You can test play without signing up so you will be able to test your bot easily and see if it's good.

The good options that I have found so far for the Auto-Play is:

- Base bet: 0.4
- Increase by 50% after loss and return to base bet after win

I have tested it many times with a bankroll of 300 mBTC and so far it has been working great! It does make a good profit. The only problem is that the rape train causes you to lose all of your cash. So if someone made a bot we would be able to dodge the rape train and profit.

There is a really big potential that it will be a profitable bot so if you love gambling and/or programming please help the community out!

I also joined this request.

Alternatively, you know you advise me where should I start teaching me to know the future program itself?

(I use translator, sorry for mistakes)

I am still looking for this, is there anyone out there that can do this?

Agent Raigar - August 10, 2016, 6:19 pm

Are you looking to get this done for free? Let me know if not.

I am actually, I wasn't thinking to have the bot just for myself but for the whole community of gamblers. And most of the gambling site bots are free so I didn't even think of paying for it.
