Thread: [files recovery after system recovery - Windows 10](#)

ThDodger - May 30, 2016, 9:39 am

Hi Guys,

yesterday i had to recover my windows, i've already setup a recovery usb
before recovery i had 2 drivers : C , D
i thought recovery won't affect D (where i store all my files)
but after recovery i found only one driver : C .. with th whole size of Hard disk

i need to recover those files on D
i tried some recovery apps but didn't work, they only restore files which were on C originally ...

Plz help me, it's URGENT

TheGoldenRelik - May 31, 2016, 2:33 am

Can you find a file in C which is called Windows.old ?
I think that everything should be there

So everything was merged in one partition,right?
Shit, you have to use a file recovery tool. Try EaseUS Data Recovery Wizard

i tried ..

it asked me to chose th partition where i lost my data, i couldn't cz it's gone
so i chose C .. but th tool recovered only th data that was on C .. no data from D were recovered

what can i do ?

how many hours did you give to the program to scan your drive?
Did the whole process went to 100%?

Did the whole process went to 100%?
90 minutes maybe ,, till 100%

TheGoldenRelik - *May 31, 2016, 6:15 am*

Did you try also the deep scan?

90 mins won't cut it.. use a deep scan, or use Recuva. Also worth a try

ThDodger - *May 31, 2016, 9:44 am*

i'm using FileRecovery pro
doing a last chance super scan now .. 10% till now
estimated time 3 hours

hope it works
