Thread: [\[THEME\] Alpha version: The Wingless Themesuit](#)

tusharthegreat - June 2, 2016, 10:20 am

It's finally here !

Presenting, the Wingless Themesuit

This is pre-pre-release alpha version so don't expect perfection. Didn't think I could ever complete this but here it is!

[img]<http://s10.postimg.org/4pu0dqmy1/j8ilg0.png>[/img]

How to use this theme?

Copy all from <http://codepad.org/wGFDY5B3> and paste it in a new class.

Go to solution explorer, it shows all forms. Make sure you have 'Show all Files' checked, then open your main form's designer.vb .

Change Inherits System.Windows.Forms.Form to Inherits customwindow and build.

This is important as most of the controls use intensive animations which are handled by a global timer. This timer needs to start at program launch so I added that code in the CustomWindow class. So, to have animations and a good looking form inherit it. [u can do this to every form too]

ControlsButton
Material

Original

Soft

Rounded

Controlbox

Checkbox

Radiobutton

Spinner

Circular Progress

Linear Progress

Toggle

Trackbar

Textbox

Now, let's see the details...

CustomWindow

Features:Borderless Resize/Move

Custom Form Shadow

Full support for Aero Snap/Dock

Statusbar

Loading and closing transition

The forecolor prop is currently used for the statusbar color.

Custom Control Box

Still in dev stage. Till now only supports max,min,close. Looks weird on dark backs because of the bevels. I think I'll take care of this in the next release and probably also add some animations. Note

that you DO NOT need to add this to a form which already has customwindow.

Custom Button

Showing, Original, Soft and Rounded button variants on light and dark backgrounds.

The Original and Rounded variants are 100% customizable. Just change the bgcolor- it takes care of others itself!

The soft variant is a type of extra control, just for fun.

The Custom_Button class has no animations and is meant to be lightweight and easy to use.

Custom Material Button

Now this is completely based on animations and looks fabulous both on light and dark backgrounds.

There is an extra prop called FloodColor which changes the color of the flood animation in addition to back/fore color.

Custom Textbox

Use like a normal textbox.

Custom Trackbar

Note that this is more precise than any other trackbars I've seen.

Custom Linear Progress

Forecolor is progress color
Oddly, the gif above has some glitches (none in real!)

Custom Radial Progress
See it above...
Forecolor is progress color

Custom Radial Marquee

continued to next post.....

Custom Radio

The fun thing is that the radio 'button' moves from one control to the next based on the actual positioning of the controls.

Custom Toggle

Clicking on the toggle is the same as clicking on it's container. You can also drag the button back and forth.

Custom Checkbox

The tick mark takes the color of the controls background, thus looks good in all situations.

Notes Generally, all non-text controls have their forecolor as their main highlight color

You need to build the project in order to display the changed backcolor of the rounded variant of the custom button

There is a customization property in almost all controls which can be used to quickly change the values of some common properties of multiple controls using a single string.

I have ditched colorhook completely - too tedious.

The themebase has been stripped - a lot. New code has been added. Expect a new themebase release in some time.

This one completely supports my Interpolation class.

The link given above is a single-file link. However, if you want to keep updated about changes, there's a github link too: <https://github.com/tusharpandey13/Wingless>

What to expect next ?

Control: Tabs ?

Control: Numeric Up/Down

Control: Seperator

Notifications ???

Custom msgbox()

A complete control-box

Even more animations!

Optimized methods

Extension of the 'customization' property

Some minor control edits

something secret....

Thanks

Aeonhack

Other people that I have mentioned in my other threads
me..

Nick (Name) - June 2, 2016, 10:30 am

OMG this theme has made me cum in my panties. I am in absolute admiration of your time consuming work! It looks amazing! Thank you so much for the share and the showcase! On a side note, why not change the dorm name to WinglessForm instead of customform? And will their be a C# class, sometimes converters mess up the code, and adding a dependency for a theme is just another drag along. I can't wait to try this out though!

bit-trader - June 2, 2016, 10:40 am

that's very cool,i liked it.

tusharthegreat - June 2, 2016, 10:43 am

Yes I think I will post a c# version too. Thanks.

Um, it's still alpha and still debug. I didn't care to change the names. Will do.

bit-trader - June 2, 2016, 10:52 am

(Jun 2, 2016 10:43 AM)tusharthegreat Wrote: [\[CITE\]](#) Yes I think I will post a c# version too. Thanks.

Um, it's still alpha and still debug. I didn't care to change the names. Will do.

I am a c# learner and if you can tell me how to develop these themes then i would be much happy.

tusharthegreat - June 2, 2016, 11:04 am

(Jun 2, 2016 10:52 AM)bit-trader Wrote: [\[CITE\]](#) I am a c# learner and if you can tell me how to develop these themes then i would be much happy.

Haha. I can assure you that you know much more about programming than me. But if you want I could release a few threads on making general custom Controls. I generally prefer vb over csharp. I am learning and porting this shall be a good start.

Trust me, you do not want to learn from me hand to hand. I'm not that good a teacher. There are better people around.

Anyway, I'm just a kid.

SIM-2914476 - June 2, 2016, 11:06 am

Wow amazing dude! Im just gonna PM you about something I hope you can show me how to do :) Appreciate it!

tusharthegreat - June 2, 2016, 11:25 am

Okay customization

Custom window has some props

1. Sht : this sets the status bar height. It can cover the whole form
2. Sst : boolean weather to show the status bar or not.
3. Shadow.Shadowcolor : change this to some color to get a glow around the form (maybe I disabled this, check)

I'm afraid the title bar's static. Expect update in beta release. Until then, use a label.

SaketSaket - June 2, 2016, 11:37 am

Awesome work..... keep up your good work...

.cYRil - June 2, 2016, 12:50 pm

Material Button & trackbar & Radial Marquee are really great ,they bring some new ideas to new design,well done for Really Amazaing theme

Rhez - June 2, 2016, 6:13 pm

The effect. Just wow!

Good work buddy ?

Charles Carmichael - June 2, 2016, 6:15 pm

This theme looks really great keep it up!

jhonth0r - June 3, 2016, 3:05 am

Nice theme m8. Thank's for sharing

SIM-2914476 - June 3, 2016, 5:08 am

Code doesnt seem to work - I made a new class removed everything in it and pasted but theres just errors.

I think half of the code is cut out :/

Siy? - June 3, 2016, 5:36 am

this looks fucking amazing, is there any chance someone will translate this to C#?

Lexus™ - June 3, 2016, 6:28 am

this is totally awesome :')

an amazing piece of art contributed to VB.NET section

keep it up Mate <3

tusharthegreat - June 3, 2016, 9:03 am

(Jun 3, 2016 05:08 AM)ShinyMK Wrote: [\[CITE\]](#) Code doesnt seem to work - I made a new class removed everything in it and pasted but theres just errors.

I have vs15 and it works well. Can you describe about the errors?

Anyway, try doing everything from the start again. You can also use the github link. It has all the components in separate physical files - very convenient to use.

Also, you need a build BEFORE inheriting customwindow.

SIM-1847363 - June 3, 2016, 11:50 am

YEEEEESSSSSSSS, Dude this is something new and i love every bit of it. Nice animations.

I would love to learn some techniques from you, I'll PM you when i have some free time. Looks like you know more than me, and i would love too learn somethings.

My Computer - June 3, 2016, 5:09 pm

This theme looks amazing. Good job OP!

sirmajor - June 3, 2016, 5:18 pm

Wow this is amazing , nice work on this guys.

SIM-2306826 - June 3, 2016, 9:28 pm

Wow, you did a really nice job on this. I like how you took making themes to the next level. Bravo!

tusharthegreat - June 3, 2016, 11:37 pm

Thx everyone, didn't expect this much support. Grateful to you guys.

cristlol - June 4, 2016, 3:50 am

Awsome amazing theme, good job nice work

SIM-2914476 - June 4, 2016, 3:56 am

The CodePad link is completely cut off near the end.

Here's the fixed code: <http://codepad.org/veAP3bfe>

EDIT: Codepad sucks - It has some kind of Character Limit.

Heres it in full in Pastebin: <http://pastebin.com/raw/haVDFRbJ>

Edit: Seems like it keeps giving an error when I try to close it. :/

tusharthegreat - June 4, 2016, 5:36 am

Fuck u codepad

We cant D: You needa get an UPgrade :/

Also i was editing the ControlBox custom control to make the Button Icons white (Due to the color of my overall app) and all of a sudden I start to get a weird TimerStart exception. Any idea?

<https://i.gyazo.com/52fbacd9d549a977bc6336628f2ea73f.png>

P.S: For some reason theres a small #fff black bar on the very bottom of my app for some reason? Also my form is Locked set to true yet I can still resize my app?

Mendax47 - June 4, 2016, 6:17 am

Nice Theme But Getting Crash After Exiting The Application At VS 15 (At Debugging But Standalone No Crash)..

I Can't Compile It Using VS 13

Works Very Well With VS 15

mototatord75 - June 4, 2016, 11:27 am

Wow nice thanks works perfect for me !

Don Genovese - June 4, 2016, 12:15 pm

Wow that looks amazing. A C# version would be great

Odus - June 4, 2016, 12:38 pm

(Jun 4, 2016 12:15 PM)TTiger Wrote: [\[CITE\]](#) Wow that looks amazing. A C# version would be great
Compile it as a class lib. Easy.

Don Genovese - June 4, 2016, 12:49 pm

(Jun 4, 2016 12:38 PM)Odus Wrote: [\[CITE\]](#) Compile it as a class lib. Easy.

<https://i.gyazo.com/52fbacd9d549a977bc6336628f2ea73f.png>
If you want change it, look in the OnCreateControl() event of the control. All the bitmaps of the icons are made there so you can edit from there.

(Jun 4, 2016 05:41 AM)ShinyMK Wrote: [\[CITE\]](#) P.S: For some reason theres a small #fff black bar on the very bottom of my app for some reason? Also my form is Locked set to true yet I can still resize my app? That may be the statusbar. The CustomWindow has a sst property. Turn it to false to hide the statusbar.

(Jun 4, 2016 06:17 AM)Mendax47 Wrote: [\[CITE\]](#) Nice Theme But Getting Crash After Exiting The Application At VS 15 (At Debugging But Standalone No Crash)..

I Can't Compile It Using VS 13

Ya that's something about the timer. I think it does not gets disposed in time. You can edit the FORM OPENING AND CLOSING section. There is a formclosing event there.

Exactly what errors are you getting using vs13?

EDIT:: Okay saw the errors, will do it for you guys in vs13 and give a seperate link.

EDIT :: NEW LINK

CodePad messed up it all. ONLY THE THEMEBASE WAS THERE !!!.

This one's updated, on pastebin.

<http://pastebin.com/Ne1K61NN>

????Kosdff - June 4, 2016, 10:44 pm

That looks so fucking cool keep up the good work!

Oliver Sykes - June 5, 2016, 2:06 am

Any reason that the checkbox, uh, check is placed so low? Maybe I overread it or something, but I didn't see anything addressing it...unless that's intended, which is kind of unfitting imo. Other than

that, this theme is beautiful. protip: Since you're not upgraded and can't edit your post, I'd ask an upgraded member on the first page to link the code for you.

Mendax47 - June 5, 2016, 3:07 am

Thanks For Your Response Bro...

Still Works On VS 15 But Doesn't Work With VS 13

Here Is The Error (Only 4 Error) I Am Not A advance Programmer Just a Beginner So I Could Be A Mess To You And Sorry For That.... :(

Error 27 'ComponentModel' is ambiguous, imported from the namespaces or types 'System, System.Windows.Forms'. c:\users\mendax\documents\visual studio 2013\Projects\WindowsApplication1\WindowsApplication1\CustomTheme.vb 2924 2 WindowsApplication1

Error 28 'ComponentModel' is ambiguous, imported from the namespaces or types 'System, System.Windows.Forms'. c:\users\mendax\documents\visual studio 2013\Projects\WindowsApplication1\WindowsApplication1\CustomTheme.vb 3190 2 WindowsApplication1

Error 29 '#Region' statement must end with a matching '#End Region'. c:\users\mendax\documents\visual studio 2013\Projects\WindowsApplication1\WindowsApplication1\CustomTheme.vb 4974 1 WindowsApplication1

Error 30 '#End Region' must be preceded by a matching '#Region'. c:\users\mendax\documents\visual studio 2013\Projects\WindowsApplication1\WindowsApplication1\CustomTheme.vb 5000 1 WindowsApplication1

SIM-2914476 - June 5, 2016, 4:48 am

The new pastebin you provided works for me very well but the issue is that when I drag and drop stuff onto my Form it gives me an error:

<https://i.gyazo.com/d7944a3b7b305257d665074797afd3a6.png> (ProxyFuel is Form1) - I already have it inheriting CustomWindow.

If I go into my Designer.vb and remove "ProxyFuel." from the line of that item it works but then if I change anything in the Designer it will re-write the designer.vb making the error show up again.

Anyone else noticing that the Custom ControlBox bitmap icon's aren't centered? It seems like its only centered for a certain height or something.

<https://i.gyazo.com/96c7d459fae3f5a3321275454b93e9b7.png>

Here's my edited version of your Custom ControlBox - I inverted the colors and added more regions to explain what stuff does. <http://pastebin.com/raw/4wF0W6nL>

tusharthegreat - June 5, 2016, 8:10 am

Thx man

Just looking into it wasn't free the whole day

BTW the new control box looks awesome

SIM-2914476 - June 5, 2016, 10:02 am

Yo - Theres a weird issue - Whenever I do Me.Close e.t.c it doesnt actually close the app for some reason. Also clicking the Exit button on the ControlBox for some reason (SOMETIMES) Gives a Error

tusharthegreat - June 5, 2016, 10:23 am

(Jun 5, 2016 10:02 AM)ShinyMK Wrote: [\[CITE\]](#) Yo - Theres a weird issue - Whenever I do Me.Close e.t.c it doesnt actually close the app for some reason. Also clicking the Exit button on the ControlBox for some reason (SOMETIMES) Gives a Error

Ya I think its because of the closing animation. I have to say I was rather sloppy here.

Go to custom window code, in the visuals region there is a sub called closefx which handles all the animations. Delete it and all its references.

Also, in the form closing method there should be a line

Me.accessible description="animated control"

Delete that too. Done.

Frankly, I still don't know what that error is about. Best guess - timer. But it happens only sometimes so I ignored it.

About the vs13 issue, its very easy to fix. The error shows in 2 lines where I've written
<componenmodel.something.....

Just delete the componentmodel part and your done.

SIM-2914476 - June 5, 2016, 10:27 am

(Jun 5, 2016 10:23 AM)tusharthegreat Wrote: [\[CITE\]](#) Ya I think its because of the closing animation. I have to say I was rather sloppy here.

<componenmodel.something.....

Just delete the componentmodel part and your done.

Im gonna try it out - Btw you should edit your Pastebin and make the Positions of the Bitmap icons
-1 of the Y axis position and it will be centered right.

EDIT: Only up 1 for the Close button but for the Maximize you go up 2. For the minimze you also go up 2 (I think)

tusharthegreat - June 5, 2016, 10:35 am

Okay about the other vs13 issue where it says custom window is not declared bla bla just do this
(now I'm cursing myself for being a smartass)

If any of you think WTF is this then please wait until tomorrow I'll update my github, gotta sleep
If not then read on.....

Open custom window code. You notice those blue lines on the scrollbar, those were me trying to make the code pretty. Didn't realise it only worked on vs15

Anyway, expand the 1st region called IMPORTS

After the class declaration delete the line in which it says #end region (yep, just below it)

Now delete the first line too (it makes the code look confusing)

Now come to the end of the code, delete the last line, and some lines before that, which says, #region "timer"

Now compile

Done

(Jun 5, 2016 10:27 AM)ShinyMK Wrote: [\[CITE\]](#) Im gonna try it out - Btw you should edit your Pastebin and make the Positions of the Bitmap icons -1 of the Y axis position and it will be centered right.

Will do

Mendax47 - June 5, 2016, 12:58 pm

Thanks Bro For Your Help..... And Finally Done It.....Here Is The Code For VS13:

hxxp://pastebin.com/iPt2A2kF

And One Other Thing Is Can I Use All Of The Control With A Normal Form..? I Mean Without Your Theme .. Case I am Using DevExpress Theme.. But I Really Like Your Button Text And Other Control.....

Millionaire - June 5, 2016, 3:03 pm

Looks like pretty great work dude. Keep up the outstanding work! ?

tusharthe great - June 5, 2016, 6:03 pm

(Jun 5, 2016 12:58 PM)Mendax47 Wrote: [\[CITE\]](#) And One Other Thing Is Can I Use All Of The Control With A Normal Form..? I Mean Without Your Theme .. Case I am Using DevExpress Theme.. But I Really Like Your Button Text And Other Control.....

Well, you can but the animations won't work.

Only custombutton is without animation so I think you can use it standalone. Maybe custom check too.

If you really desperate to use them then you'll have to rip off the timer code from my themebase. Pain in the ass.

Just remember, whatever you do, mention my name in the credits.

(Jun 5, 2016 10:27 AM)ShinyMK Wrote: [\[CITE\]](#) Im gonna try it out - Btw you should edit your Pastebin and make the Positions of the Bitmap icons -1 of the Y axis position and it will be centered right.

EDIT: Only up 1 for the Close button but for the Maximize you go up 2. For the minimize you also go

up 2 (I think)

I think I did them deliberately, minimize should be near the bottom edge, it gives meaning to that single line. Restore is also displaced 1px down deliberately. They look good. If not for you then you are free to edit them. (Maybe I'll add a centre icons prop next?)

Mendax47 - June 5, 2016, 8:07 pm

(Jun 5, 2016 06:03 PM)tusharthegreat Wrote: [\[CITE\]](#) Well, you can but the animations won't work. Only custombutton is without animation so I think you can use it standalone. Maybe custom check too.

(Pain in the ass.)^2 :v

???? - June 5, 2016, 11:06 pm

This is beautiful!

Just don't like the checkmark in the checkbox, needa center it.

tusharthegreat - June 6, 2016, 2:24 am

Thank you for that dark control box code. I have combined your dropshadow and my tints = perfect blend. The new one now supports both light and dark backs and changes accordingly. Note that I had to remove those regions made inside subs-that's what the vs13 errors were about.

[img]http://i.hfimg.xyz/d200.png[/img]

Update

Now works for vs15 and 15-

Updated the controlbox, now supports dark backs

Fixed the error that sometimes shows up when closing the form

Fixed the error that shows up when you close the form in debugging mode.

Fixed the error that sometimes the form doesn't close.

Fixed the error that taskbar previews shows the shadowform's preview.

Reduced form-close animation duration : 300 ms

The updated files are available on the gitub page <https://github.com/tusharpandey13/Wingless>
There is also a 'Wingless.vb' file present in it's root directory, having everything in one file.

Someone please edit the original post and update the links/info. Will be very grateful.

PS- If anyone does, please add a thanks to ShinyMK

Mendax47 - June 6, 2016, 7:25 am

Now It Is looking Grate.. But Still I Am Looking For A Separet class For Theme Only.. And Timer

Only... And Why I Can't Add Image To The Button?

tusharthegreat - June 6, 2016, 8:48 am

(Jun 6, 2016 07:25 AM)Mendax47 Wrote: [\[CITE\]](#) Now It Is looking Grate.. But Still I Am Looking For A Separet class For Theme Only.. And Timer Only... And Why I Can't Add Image To The Button? It's not as straight as you think. There is a reason there are so many classes. Similar objects need to be created at many places and some of those won't work without classes. This is oop dude, it can't live without classes.

For the image, I will add support for it.
BTW, did you notice that ALPHA in the title? Small details come in final releases bro.

You suggest, I develop, that's how it goes.

Quobi - June 6, 2016, 11:35 am

Wow... just wow. I never thought such things can be done by using winforms only. You are very talented tusharthegreat!

I can't wait to see more of your works.

SIM-2914476 - June 6, 2016, 3:44 pm

(Jun 5, 2016 10:23 AM)tusharthegreat Wrote: [\[CITE\]](#) Ya I think its because of the closing animation. I have to say I was rather sloppy here.

Someone please edit the original post and update the links/info. Will be very grateful.

PS- If anyone does, please add a thanks to ShinyMK

:P Gonna go download and try this new update. Hopefully it adapts well to my color scheme and the errors are fully fixed :P

EDIT: Seems like when I close it in Debugger it doesnt actually end the Process or something as its still thinking its running in deubgging mode.

EDIT2: Never mind it seems to be working fine lol just my mistake.

EDIT3: Having a weird error doe - Whenever I drag a custom Item from the Toolbox onto my main form it gives me an error saying its Undeclared in the form designer.vb its adding "Form1." before for example Custom_Animated_Text so it reads like: ProxyFuel.Custom_Animated_Text() which of course is Undeclared as all the vb code is in a Class I named Theme.vb any ideas how to fix this?

EDIT4: You still havent seemed to fixed the Positions of the Icons. Heres the ControlBox code with the fixed positions - Note this code was from the first Pastebin you pushed out so I have no idea if you made other changes to the COntrolBox since then. Either way this code is also made to be White Icons. You can just edit it as you need. Heres the code witht he Positions Fixed:

<http://pastebin.com/raw/SG4xhmdl>

EDIT5: You should just remove the Status Bar - its a good idea you had going but its not practical. You cant really add items to it like an actual status bar etc - The only thing its mimicing is a Panel with a Black Background with a Size Thing that also doesnt do anything.

tusharthegreat - June 6, 2016, 7:16 pm

Long post, hehe

Can you send me a minimal version of your project- just forms, designers, resources no code of course. I will see then what can I do. For now, check if you have written proxyfuel.customwindow in designer. If yes then change to just customwindow.

Ya OK I'll do it, add A centre icons prop and set sst's default value to false. You CAN place controls on the status bar, just place them low enough.

And, change the forecolor of your form, it changes the status bar color.

SIM-2914476 - June 6, 2016, 8:44 pm

<https://i.gyazo.com/cad536a8adf43be24653cfa0c44d08d1.png> Its set right - Unsure why its happening. And yes you can place Labels etc on it but thats just making it pointless - The point of a StatusBar is so that its Always auto-sized efficiently and the text's proportions etc fit and change automatically when Text is changed etc.

And having the ForeColor set the StatusBar's color is generally not good at all as my ForeColor is set to Black for Black text so it makes it look bad.

Mendax47 - June 7, 2016, 7:21 am

There Is Some Reason I Don't Wanna Use Your Animated Form (Custom Form)... And For This When I Was Going To Split The Timer Form The Them... It Gives Me A Huge Pain In My Ass..... :(..

[hxxp://i.imgur.com/3e5eWWV.png?1](https://i.imgur.com/3e5eWWV.png?1)

This Is One OF Them....

Problem With Your Icon Position (Close, Minimize) When Maximized

Don't Know How To Set Title (This IS Completely My Fault)

After That I Decide To Use Material Skin Button (Flat Button) And This Is also Too Grate That I Can't Re-size The Button...

F**K My LIFE

And Still There Is Some Problem When You Close The Form At The Time Of Debugging.... :3

SIM-2914476 - July 28, 2016, 8:48 am

Wonder why the OP just abandoned this Project :/ It was doing really well as it was full source code and nice and clean. No need to do all of the crap like on MaterialDesign for .NET etc

Just got this added in to my new ProxyFuel app im working on and it looks DOPE

tusharthegreat - July 29, 2016, 6:46 am

Working man, working

Don't want to release a new version for every slight change

Expect beta with fireworks

Expect custom tool windows too..... ?

Oh you back :D Hey, Im having a few questions/requests, Can you Make the CustomWindow's ControlBox and the Black Line thing for Designer be "TopMost"? Also with the MaterialButton the

Animation speed looks way better when set to 400. :)

Just found a bug with the Material Button - If I put it in a TabControl's Page the Animation wont work right , Each time I click it will make an ellipse like it should but will only increment its size by 1 pixel each click and will just stay :/

Support™ - July 30, 2016, 10:13 pm

Top notch work. Surprised no one has rated this thread yet.
Keep working Tushar, this is awesome.

I would but L33T's cant :/

He has done some serious work on this I sent him a Pull Request on Github for some contributions but its up to him if he wants to Merge the Branch.

And if he can get the Animation working inside Tab Control Pages then life = sorted. (I think it happens due to some of the Inherits CustomWindow class not being used in a TabControl or something as the same exact problem/broke animation happens when you have it set to the default Inherits Form.

Thanks for the help, I saw it

Still until update , kindly use a new branch, just upload or copy the changed files (individual files are simpler).

Thx for that it's different

Ya sorted hehe

OK created a branch named side edits

You are free to do whatever there or even create new branches

Sweet! Any idea why the Animations dont work on Tab Control pages? (I think they work on normal

ones but for custom owner drawn ones they dont D:)

tusharthegreat - July 31, 2016, 6:33 pm

Let me get this clear for you

What means animation in those pages is just copying a bitmap from the screen of the previous page, use a for loop to move it some distance, and then change the page and hide that bitmap.

Good 'trick' as the system.timer fires only every 16 ms. Which was way inaccurate for those interpolations. That's the reason I added the custom timer. Apparently aeonhack wanted to do the same with his precision timer but I don't know why it was precise in only 1/10 cases. In rest, just like a simple timer.

Now, my timer fires every 1ms. We all know GDI+ is not the fastest renderer available. So, doing big things need times - more than 10ms which can be disastrous when you have a timer scoped for 1ms. Things get horribly slow until the animation is over.

This generally happens when capturing bitmaps, drawing on them, and creating a lot of indisposed variables. Per pixel operations like set-pixel and get-pixel also have a great impact. That's why in some of my controls, I have used alternatives to these techniques like creating bitmaps at control creation and repeated use of single pen or brush throughout the control.

I have to completely recreate the tab mechanism. Maybe create an equivalent to pages and container.

One thing- whatever happens, I'm NOT going to use that for loop for animation.

Stupid piece of shit, it is.

Ruskie Banana - July 31, 2016, 8:17 pm

Look so good ! Thank you i'll try it

Since I don't know GDI or Aeonhack's Themebase much I don't really get what you are saying tbh

xD But either way, What your saying is there's no way to fix the animations to work when in CustomTabControls?

tusharthegreat - August 1, 2016, 7:10 am

There must be , always is
Just a different approach.....
Maybe I can make a WPF like 'pages' control

SIM-2914476 - August 1, 2016, 9:11 am

Dont use WPF shit plz as the ElementHost cntrol imo is a terrible use for using WPF controls. Stick with what you have and atleast try find out a way to fix it :)

tusharthegreat - August 1, 2016, 9:17 am

Not using it, just like it - like custom pages and containers all winform

Synn timer - August 2, 2016, 4:12 am

What am I doing wrong here? gyazo.com/da13376425e096e831c0ec362bda0408

Malthemar - August 2, 2016, 4:17 am

This looks fantastic.

Well done.

ForceJew - August 2, 2016, 9:53 pm

Aamazing work looks super beautiful.
A C# version would be awesome.

SIM-2914476 - August 5, 2016, 7:19 am

Hey - Im making a very slim down version of it with only a couple of the controls - I was just quickly wondering why theres a "upcust" function? Why do we have a huge string of many values in a "Customization" property?

P.S: In for example "OnPaint()" for the ControlBox, What does the following code do exactly? "If Width = 0 OrElse Height = 0 Then Return"

tusharthegreat - August 5, 2016, 8:03 am

(Aug 5, 2016 07:19 AM)ShinyMK Wrote: [\[CITE\]](#) Hey - Im making a very slim down version of it with only a couple of the controls - I was just quickly wondering why theres a "upcust" function? Why do we have a huge string of many values in a "Customization" property?

Yeah you are free to do that just mention me in credits (did you see my 'brag' section in interpolation class? Copy that (its below the themebase)

Upcust is used to put all common properties of the control to a single property customisation for easy copy paste and other things. It's still very primitive.

Doing things on control of 0 width and height raises errors therefore that line

SIM-2914476 - August 5, 2016, 8:12 am

Ok thanks - I have another issue - Since Im trying to not need to "Inherit ThemeControl" (Tryna make it standalone with just a few Helpers), The PaintHook() just gives me an error saying it cant be overrides or something :/

tusharthegreat - August 6, 2016, 6:29 am

(Aug 5, 2016 08:12 AM)ShinyMK Wrote: [\[CITE\]](#) Ok thanks - I have another issue - Since Im trying to not need to "Inherit ThemeControl" (Tryna make it standalone with just a few Helpers), The PaintHook() just gives me an error saying it cant be overrides or something :/

You should learn some oop concepts. Like yesterday.
Paint hook here is an overloaded function of the theme base, so it won't be available in classes which are not derived from the theme base. Simple.
It is essentially just a part of the onpaint() override so to make standalone controls, use protected overrides onpaint() instead of painthook

Alleyway - August 6, 2016, 11:02 am

Wow thanks man great work!

adenfr - February 1, 2017, 1:38 am

thanks man it's very cool

Actave - February 1, 2017, 8:03 am

thanks dude that looks sick

hfTP54 - February 1, 2017, 10:39 am

Update

Ya, this was by me.

[Link to code](#)

This update is after a looooong time. Have been away....

Changelog:Added CustomTab

Completely changed CustomButton

Improved CustomWindow

Major refactor

Moved the timer from CustomWindow to a global module - with smart switching

Slimmed down the themebase

Fixed some bugs

Optimizations

Bugs: Sometimes timer runs in designmode

X of ControlBox

Upto 20% cpu usage under rare conditions (usually 0 to 1%)

TabControl is still not animated

CustomTab and CustomToggle need the project to be build at least once to display correctly in designer.

Tell me if you don't like something i'll change it.

BTW, EVERYTHING is still 100% customizable - everything can be recolored by your choice.

CKkio23 - February 1, 2017, 8:34 pm

15 enterprise although the code should work for any VS > 8

4.5.2 for code but 4.6.1 is installed, will update

Okay now it's officially 4.6.1

PVPMinersDE - February 2, 2017, 4:00 am

good work on this looks very nice ^^
