[Long Shadow Generator](#)

-
-

Long Shadow Generator allows you to create awesome drop shadows to objects via a simple extension.

You can customize the shadow to be black or white, solid or gradient, set the opacity, or set it to smooth or flat.

[Flaticon](#)

-
-

Flaticon is an extension that allows you to search hundreds of thousands of icons from within Photoshop.

It is very useful when you are trying to design something and you're looking for free icons to use in your layout.

I've used it a lot in the past year, and this is definitely a must have.

[Fonts.com Web Fonts](#)

-
-

This extension gives you thousands of fonts at your fingertips. You can preview them to see if they will fit your design nicely. Webfonts.com's extension takes one of the hardest parts of a design and makes it that much easier to perfect.

[Layrs](#)

-
-

If you are like me, you know layer management is a pain when having to deliver your .PSD file to your customer.

This plugin does all of it for you and cleans up your .PSD file to be presented to anyone that needs to see the workflow. This is a time saver for sure.

[CSS3Ps](#)

-
-

If you've ever used HTML5 and CSS3, you know it's a pain in the ass to convert your image layers to CSS3 to be used for web design.

This plugin will convert your Photoshop layer into CSS3 code to be used for web development.

+mK - June 5, 2016, 8:22 pm

[Teeth Whitening](#)

-
-

Who doesn't want white teeth? Me, I don't give a shit - but that doesn't mean that I've never had clients that wanted photos to be retouched.

This action does all the guess work for you and will leave your photos with stunningly white teeth!

[White Background Removal](#)

-
-

Ever want to use an image but for some reason the person is an idiot and uploaded the file as a .JPG?

(Any transparency in the image is given a white background.) Then this action is for you!

This will strip anything with a white background and present you a nice rendered outcome.

[Watermark Photoshop Action](#)

-
-

Need to mass produce watermarked images for your website? You can have up to 9 preset watermarks to be applied to your photos.

[3D Box Generator](#)

-
-

If you plan on selling a software on this website, sometimes you may find the need to create a professional presentation to your clients.

You can do so by creating a 3D Box art that will put your product's banner onto a 3D model.

[Polaroid Generator V3](#)

-
-

This action will allow you to convert your images into a Polaroid via an overlay and a highlight. They're pretty cool when you try printing them for hanging.

+mK - June 5, 2016, 8:29 pm

[365 PSD](#)

-
-

365 PSD is a website in which will let you download several free .PSD files for various categories, including UI kits, logos, mock-ups, and business.

[Premium Pixels](#)

-
-

Premium Pixels is another Photoshop resource website with many different downloads, to include various icons, interfaces, textures and patterns.

[Dribbble](#)

-
-

You may have heard of Dribbble before. Dribbble is a lot like if Twitter and Graphicriver had a baby, except it's free.

It's a place for designers to share their work via screenshots. A lot of people decide to release their work with .PSD files.

You won't find another website with as many free, high quality .PSD files as this one.

[freepik](#)

-
-

freepik has well over 5,000 free .PSD files for various categories to include objects, web elements, and buttons. There is a high chance that you'll find something that you're looking for, here.

[Shaboopie](#)

-
-

Shaboopie has well over 80 logo .PSDs for you to modify and use at your expense. If you do not like the logos themselves, it's another way to get good text styles!

[DeviantArt](#)

-
-

Perhaps one of my favorite websites, ever. If you could think of anything you'd ever want, DA has it all for you.

There is a ton of resources on this website for you to play with, and you will be seeing DA in other resource categories.

This is a fucking massive post, I'm glad I could help you post it! It seems like it will help a lot of people, I'm going to bookmark it for use later! ?

iHoodies - June 6, 2016, 10:41 am

Goddamn OP! Nice post, I'm sure it will help me and many others. Thanks for your time and effort into this thread!

Hulk - June 8, 2016, 4:52 am

That's one long ass thread!

There is a shit ton of usefull stuff in here, definetely gonna save this thread for later use!

Thanks OP! Really appreciate all your effort you put in here

Hopsin - June 8, 2016, 5:00 am

Bookmarked this thread. Also I have rated 5 stars, its quite awesome, nice and very interesting things you have contributed to the community.

Many thanks, much appreciated!

Marketplace Buyer - June 9, 2016, 3:12 pm

Very nice thread. I could definitely use some of these in my work.
Nice share!

SIM-2914476 - June 9, 2016, 3:30 pm

Nice job on this dude! Thanks.

TheGoldenRelik - June 10, 2016, 12:56 am

Awesome thread! Posting to check on this one later!

+mK - June 22, 2016, 2:06 pm

Thanks guys, I appreciate it. I'm going to be going through and adding several more plugins and add-ons to each section. I'll also probably grab 3P1C so that I can add more thread designs.

The-Hive - June 23, 2016, 3:10 am

Thanks mate, I appreciate the effort you put in in order to create this thread.
Nevertheless, as a designer I have to say: Sometimes less is more, simplicity sometimes is key. Especially beginners shouldn't load a shit ton of extra stuff thinking it would help. First learn the basics, then look at stuff at this. +much stuff like this slows Photoshop down a lot.

Things like the layer name thingy is pretty nice to be honest, haven't heard of it yet!

I disagree and agree at the same time. Most of these resources are for those who do not grasp the fundamentals of Photoshop to perform the tasks it takes to develop designs. A lot of these will help them create those designs.

I do agree that having too many of the wrong plugins will bog PS down. For example, having 1,000 fonts installed is incredibly CPU intensive for PS. Having too many plugins will as well. Which is why I provide specific ones, so users can install individual plugins and actions, not all of them as a package.

Issvor - June 27, 2016, 11:21 am

holy shit, what a post. Thanks for all of the resources, I'm gonna check most of these out :)

Personally, I prefer knowing what I do and I only use stuff like yours to do things faster that I could've also done by myself. So to reduce the needed amount of time.

But your're right, for people with no knowledge at all, these things can help creating things they wouldn't be able to creaty by themselves.

Nice work anyway!

Added 12 new thread designs, going to add quite a few more. Going to compress each screenshot with lossless quality and add back-drops tomorrow.

A_P_T - July 19, 2016, 7:16 pm

this is great, thanks. it is a comprehensive thread.

Hello, sorry I am new to photoshop, literally no experience. I have the old photoshop cs6 and I know the new one is photoshop cc I think? Do these plugins work for the old cs6? Or do I have to pay for

the monthly cc version to get these plugins to work? Thank you

The majority of them will be backwards compatible, yes. If I'm not mistaken, CC is basically a re-skinned, updated CS6. I only have CC because I could get my hands on it, however, I wouldn't be the least upset if I had CS6.
