Thread: [Make money with your idle PC!!](#)

Mr. Robot - June 7, 2016, 11:55 pm

So a user recommended me this a while back, and it's working great.

<https://minergate.com/a/43a0d0f01dc75a0f20e96208>

Simple download minergate - create an account and hit smart miner or start mining a currency like Ethereum!

Smart miner will automatically mine the coin with the best rates but I would recommend sticking to Ethereum as you will hopefully make more in the long run -

The price of Ethereum went up \$1 over the last 24 hours.

You can choose to mine with your CPU or your GPU - It's really easy to set up and run and you can definitely still game/use your computer quite easily with it running.

You can set it to switch to whichever's most profitable. I did that and while it takes longer to get a large amount of one coin, it's a pretty decent idea.

OT: Used this a while ago. Had some beefy servers tearing that shit up. May or may not have lost those servers. May or may not start cracking RDPs again for this purpose.

It's not even worth the electricity, Unless you have a good rig.

Even if you dont pay for the electric why would you try its pointless, your justing mining your pc to death for pennies.

Tbh I wouldnt bother with your build. You'll need to keep your PC on 24/7 and you probably wont even hit \$2 a day or something. Dont quote me on it but I wouldnt bother. Mining is very intensive and isnt very profitable if you dont have a Bitcoin or alt coin mining rig/ rigs.

But ETH could be profitable right? Also I get "Network error. Please check your internet connection" when I open the MinerGate software.
