opened a stub crypter with ghost crypter, now every 3 seconds a window pops up for 1 second.
tried closing the process but it keeps popping up

WakenBake - June 8, 2016, 9:33 pm

Yeah, it's not gonna go that way.

Get ccleaner, remove the process from start up

Go to cmd type taskkill /? , use the format to try and kill the process . \t for force

PM me if you need more help

Ghost crypter is kinda easy to bypass , does it run on persistence as well?

Also I suggest you use sandboxie from next time .
