Thread: [FREE VM Remote Control via VNC!](#)

yotoprules - June 9, 2016, 7:42 am

Hello guys, This forum is amazing, so I decided to give something back.

I will be hosting a VNC server inside my VM, so that you can do whatever you want inside the VM, whether it be testing your RAT or just messing about with it.

THE VNC:

Remote Host: yotoprules.tk

port: 101

password: 1234hf

IF anyone tries to DDos me I will stop the VNC server forever. This applies to illegal websites and such.

Everyday I will reset the VM so that any damage to the VM will be gone, and that it will be clean.

If you have any questions, please add my skype, which is in my signature.

AAA+ - June 9, 2016, 7:49 am

Really? seriously? like honestly are you really doing this?

yotoprules - June 9, 2016, 8:33 am

Guys if people are stealing my IP and trying to DDOS me then I will just turn off the server and I will encrypt a link to the password for the VNC server.

Sikes - June 9, 2016, 8:35 am

That's awfully nice of you OP!

Thanks, no problem

Fudster - June 9, 2016, 9:56 am

Lol. You should host this behind a proxy or something so you don't get knocked offline.

yotoprules - June 9, 2016, 11:15 pm

Guys my server is still running.

Purple Kief - June 10, 2016, 8:28 am

If this actually works that's awesome dude.

Vouch from me for sure.

yotoprules - June 11, 2016, 3:55 am

VNC Server still running!

yotoprules - *June 12, 2016, 11:59 am*

Guys this isn't getting much attention so if you want to use it just PM me. Thanks!
