Thread: [Help my Dark Comet doesn't work](#)

Dannycz272 - June 10, 2016, 3:29 am

When I portforward my router on specific port let's say 1604 It says that it isn't open <Error: I could not see your service on ..***.*** on port (21)> And this happens me everytime I even bought a new router and it's still happening. So can you please help me?

Reinstall windows-tried
New router-tried
Disable hole fucking firewall-tried
VPN(cyber ghost/hotspot shield) -tried
Other Darkcomet versions-tried
Studied tune of RAT tutorials and it was waste of time
guys please help me I am totally out of ideas.

IntelCore8700K - June 10, 2016, 3:37 am

Dont use darkcomet its outdated if you want a free rat use njrat or babylon

Ventriloquism - June 10, 2016, 4:50 am

Here is why you shouldn't use DarkComet:It's no longer as stable as it used to be.
It has a major FTP & SQL vulnerability that your bots can use negatively against you.
Even with a full crypt, it's generic actions can be detected by antiviral software.
Some versions don't even work correctly.
It has many other bugs.
There are better ones in the [Remote Administration Tools](#) section.

Well I downloaded 3 new RATs-(KillerRat v10.0.0,njRAT,CyberGate).....I set up the rat portforwarded my router. Seted my RAT to Nolp. Wen't on canyouseeme.com and this this text message punched me into face "Error: I could not see your service on ..***.** on port (5552)" (I copied this message from the moment when I was testing njRAT) Well after this many downloads I have more viruses then 1 african child.....Guys I need help I even tested Social Engineering Toolkit on fucking Kali Linux 2.0.... I feel like I wasted 2 months of my life...

1. Do not use nolp unless you wanna get raped in prison
2. Pretty sure canyouseeme.com doesn't work, at least last time I checked said that error when people were connecting just fine.

Dannycz272 - June 10, 2016, 7:43 am

Well what should I use instead of Nolp. Because I think that I wouldn't find free hosting :/ I am sorry

but I am the type of noob who know just Nolp :D

BTW you are fucking 13 you are even younger than me ?

Well I totally seted up njRAT and KillerRat (both newest version) Connected to Nolp. Portforwarded my router. And I sent it to my gf. Well something went shit because on any of deez 2 RAT's didn't showed that my gf is connected -.-

That's where you went wrong ?

Not only does No-ip ban for malware, but the servers hold logs, and law enforcement monitors it.

Try [here](#).
