This is how to spread your keylogger Or any other form of file such as r.a.t worm... Its your call

You Will need: Virus, torrent creator, failsafe tracker, popular program, a torrent upload site & torrent seeding program + a brain ?[u][b]

Step 1 - Create the torrent

This really acutally depends on which torrent creator your using?

Step 2 - Seeding the torrent

Depending on which torrent seeding program your using, you just change download location

Step 3 - Uploading the torrent

Upload the torrent somewhere where they won't ban you for uploading viruses.

Remember to use a name that isn't stupid. (Ex. NotAVirus.exe)?

If you had decided correctly and seeded properly, then you should end up with something like this.?

EULA

Side Effects to SuperSpreading.

Side effects include but are not limited to: accidental screw up's, destroying data on your PC, electrocuting you, making your monitor explode in your face, setting your house on fire, killing you, changing all the text you say in online games to "oink", screwing up RAT's with too many connections, causing everyone on the planet(and beyond) to try to kill you, hacking into a nearby nuclear missile and targeting your house, changing your bank balance to \$0, getting you banned from online games, adding your name to a hitman's list, sucking you into the computer and plays ping pong with you (with you as ball), causing secret agencies to come after you, making you believe you have maggots crawling under your skin, overflowing your FTP box with junk, turning your room into a gate to hell, becoming sentient and starting to kill everyone on this planet, getting you sent to jail with a guy named big bubba or does anything else you don't want it to do. ?

Why should you go with my tut? And just me? well because i have Had a LOT of expirience in spreading! especially spreading viruses... as you see on my spreading services.. or my youtube

boosting.

hope this helped!

Yours Faithfully,
JackedYourComputer ;)
