Thread: [SIMPLE Scantime Crypter](#)

i-manuel - June 11, 2016, 3:00 pm

Hi guys!

I coded a simple Scantime Crypter.

Source:

Crypter: github.com/i-manuel/Crypter

Stub: github.com/i-manuel/Stub

Cecilia - June 11, 2016, 8:09 pm

EOF crypter...?

Really...?

What year is this... 2008?

o??law - June 11, 2016, 8:15 pm

First post too. I mean at least he's not begging for leet hax.

i-manuel - June 11, 2016, 8:26 pm

The Stub isn't.

(Jun 11, 2016 08:09 PM)LaPanthere Wrote: [\[CITE\]](#) EOF crypter...?

BTW:

I'm Coding since 3 to 4 months in .NET.

I had an idea how to crypt files, i know this crypter is not the best, but i coded all of them by myself, i didn't copy&pasted anyting and i don't watched any tutorials how to code a .NET Crypter.

BahNahNah - June 11, 2016, 8:48 pm

Pro tip, you can have multiple projects on one solution. You dont need to make seprate repositories for the stub and crypter.

Spoiler [\(Click to View\)](#)

Good attempt for 3-4 months in, surprised really.
Glad to see you know about methods and how to somehow use them :)

The payload is, consider looking into resources in .NET codedom.

Small example (don't take it too real): <https://github.com/Panthere/RuntimeExample>

i-manuel - June 11, 2016, 10:04 pm

This Example is awesome thanks man!

This code is very simple, i understand it, nice.

Trying to code my own Runtime Crypter now, btw

it is an great idea to run it with a new instance in the program :D

Nicktron - June 12, 2016, 3:09 am

I'm going to look into this, looks fine so far. :)

Why would you start with malwares? You won't make much progress if you stick to coding malicious apps, some of HF members started with GDI and made pretty neat themes maybe you should do the same who knows, you might turn up to be a good designer.

BTW:

You don't need a form app for the stub you could've started with an empty project, add a class or a module and define your entry point [sub main()] and it will work.

eCoLoGy - June 12, 2016, 7:35 am

Since when a crypter is considered a malware?

Cecilia - June 12, 2016, 7:44 am

It is mainly used for malware on this forum.
The real 'name' is more like an 'executable packer'
Which is entirely legitimate in many apps (like upx).

i-manuel - June 12, 2016, 7:46 am

I know.

- 1: I started coding because i want to be a malware developer.
- 2: A crypter isn't a malware.
- 3: I code a lot of programs(programs i need), not malware only.
- 4: 5% of my .NET projects are malware like bots.

That's what I mean bro ?
A crypter is not a malware. It can be considered so if used for illegal purposes.
But that you and me and most of ppl already know xD
Is the same old story. ?

- Terrible reasons to become a developer of software.
Don't develop malware, especially in .net.
Glad to hear so little is.

(Jun 12, 2016 07:35 AM)eCoLoGy Wrote: [\[CITE\]](#) Since when a crypter is considered a malware?
BTW: I don't know how to get stated into GDI, because there not much (good) tutorials and if i want to be a designer i should use Photoshop, but i wnt to be a good Programmer who code useful tools/apps, its not interestig for me how they look.

SIM-3167319 - June 12, 2016, 9:37 am

Try to learn more about On Fly methods.

IhabZ - June 29, 2016, 2:40 am

Mmmmm I have my crypter and im use something like DLL librauries and RunPe
I will share it with you later ;)

Is the same old story. ?

True... Crypter is not malware, its not the developer's fault if the user use it for illegal purposes.

Same goes for example tools like DarkComet...

Or TeamViewer.. and so on.
