Thread: [How to Hack a Server](#)

Black Kat - February 21, 2009, 10:33 am

People were asking for help for Sonic Blasts Server Attack program that he posted on [this](#) thread. Ok, here is a step by step guide for people that need help understanding how to use it.

Download: <http://www.mediafire.com/?dzubem0zm4i>

- Thanks to Sonicblast for the download link and original thread.

Step One: Go to the start menu and click 'Run'

Step Two: Type 'CMD' into Run and a rectangular box like the one below should appear.

CMD (Command Shell) :-

[IMG]<http://i151.photobucket.com/albums/s146/Deamie/cmd.jpg>[/IMG]

Step Three: This step is to find the server's IP (Internet Protocol) address. Type 'ping' without the speech marks followed by the website's url, for instance;

ping sitehere.com

Step Four: Wait for the server to reply and the IP will be the numbers after 'Ping Statistics for xxx.xxx.x.xx'. Take them and put them in the Server Address box.

Step Five: Download a program such as Nmap and scan the server for open ports. Take an open port on the server and put them into the Server Attack program where it says 80 by default. That is the port.

Step Six: Click attack and you will successfully start to attack the server.

Disclaimer - This tutorial is for educational purposes only, I have nothing to do with how you use it whether it be with good intent or malicious intent.

elobire - February 21, 2009, 11:31 am

i get a error when i open the file

can anyone confirm if the link is working?

Jetwall - February 21, 2009, 12:15 pm

works for me elobire. thanks for this Black Kat.

This is like a normal dos flood stuffy snuffy.

Doubt you will do any damage using this?

I think that depends on the site. It might not work on a site like good but might work on a small family site. IM NOT SAYING TO DDOS A FAMILY SITE.

I don't think it depends on the site. Unless you have like a 4GB connection it wont do anything to any site.

Black Kat - February 21, 2009, 2:24 pm

Lucky I have a 8GB connection then? Joke.

I havent tested this, as their is no need for me to Attack a server, yet im sure this will work. Its a DoS flood, thats all.
