Thread: [Java DriveBy \(HELP NEEDED\)](#)

PassportID - June 13, 2016, 7:50 pm

I need help with a JavaDrive By I know nothing haha and I want to implement a RAT on all the school computers but I need to be able to set it up.

You must be new to this stuff. JDB's got patched a long time ago. This is why Google Chrome doesn't support Java anymore because of the exploits that could be done with it.

So this is no longer possible unless you find an exploit yourself and know how to code in html, php, and other stuff like that.

PassportID - June 13, 2016, 8:01 pm

Dam any good spreading methods?

Essence - June 13, 2016, 8:07 pm

I have a few, but I don't just tell people.

rashedv - June 15, 2016, 5:46 am

gonna pay you for spreading methods, pm me if you're interested.

_KickAss - June 15, 2016, 7:14 am

sadly JDB dont work any more.

Jonesy1074 - June 16, 2016, 2:45 am

One of the best ways is to hack websites with free downloadable files on it and inject them with your RAT

Evanescence - June 16, 2016, 2:49 am

Java DriveBy has been patched for a couple years now. Why do people keep asking how to do it? It just doesn't make any sense to me

DeadEvil - August 14, 2016, 4:07 am

Java DriveBy has been patched but there are some modification and it can work just a hint use your metasploit and you will figure what i mean

Razor Dz Trigger - August 15, 2016, 2:00 am

JBD Exploits All Pacthed and now google dosent use Java Anymore :) you cannot Hack With JBD :) try to with .PDF or .DOC exploit :) or USB Stealer. or auto Run :)

kmz22222 - August 15, 2016, 1:18 pm

Didn't JDB got patched long time ago?

Lante - August 15, 2016, 1:24 pm

Yup, that's what all the other replies also say. I hope a few others will also post this after me, just to make it even more clear.

Well there arent any JDB's anymore, but something similar you can do is Social Engineering on Websites.

Use a HQ Picture of an outdated Flash Player and tell them to update Flash. Then you provide them a link to your file.

Note: Educational Purposes only.
