Ardamax Keylogger 2.8 + Easy Binder 2.0 + Tutorial

The best keylogger for creating remote installation modules.

Information

Ardamax Keylogger is the newest tool for monitoring user activity on a computer. It records all keystrokes into an encrypted log file. A log file contains information about the user working on the computer, the time of typesetting and the used application. You can view it any time you want with the help of a built-in viewer program. Besides, Ardamax Keylogger logs information about the Internet addresses the user has visited. Using this tool you will always know who used the computer, when he used it and for what purpose.

Juuuuuurd - July 9, 2010, 2:23 pm

please post virus scan to show it's legit

Abzfire - July 9, 2010, 6:43 pm

I don't trust it, if anyone finds out if it's legit let me know.

Airex - July 10, 2010, 12:00 am

OMG cybergate was already leaked million times since year 2008 xD.

and that keylogger can't crypt.

nakros - July 10, 2010, 8:06 am

uploading to virustotal now.

digito - August 5, 2010, 1:47 pm

Hi, I downed the ardamax, it came in a zip file which needs a password to open it. Can you please help me?
Thanks

andyrobo3 - August 5, 2010, 1:58 pm

whats the password? also can you pm me when you upload virus scan, thanks

Vexes - August 5, 2010, 2:00 pm

I need the pass as well :) thanks ^_^

hollandtiff - August 5, 2010, 4:00 pm

From what I know ardamax 2.8 has its own binder.
So why would the downlaod be named...
Filename: AK2.8.rar

File description: Ardamax Keylogger 2.8 + Binder -Nak
File size: 7.13 MB

futuremaster9 - August 5, 2010, 7:41 pm

password dude..otherwise download waste

status quo - August 5, 2010, 7:44 pm

What is the password ? :/

reciprocate06 - August 5, 2010, 8:27 pm

I was able to Grab this off TPB a few minutes ago seems like a decent logger but there is almost no info on it aside from their own website. How does this logger stack up against some of the more popular ones? Also the second my DL was finished avast went nuts which i more or less expected considering the nature of the program are the "mainstream" key loggers likely to not cause AV software to go nuts? Just looking for some overall opinions /answers to my question..also if anyone wants i'll post the link i got it from.

Acid Raindrops - August 5, 2010, 9:37 pm

1) Ardamax Keylogger 2.8 has been out for a long time with serials all over the web.

2) Ardamax has a built in binder that is probably undetected (The ardamax server is what's detected) so why use an external binder that is more than likely detected or will become detected soon and make your server even MORE detectable?

3) I don't know of one crypter out that actually works on ardamax, they all corrupt the server, I have also tried hexing, but that corrupted it as well.

Conclusion: Ardamax sucks, find a different keylogger or program your own.
