My personal review of the phone.

I personally like it a lot, specs (hardware), the display with amoled screen and the OS too with Oxygen and the fingerprinter (one of the fastest on market). Do not forget that this phone just costs 400\$ and it has same hardware as the newest phones. I also like that it is not plastic on backside on it, feels more premium with aluminium backside. Another good stuff with this phone is that you can get 60% with 30 min charge with the new dash charging and that can stay all day:

<https://oneplus.net/3/dashcharge>

Feel free to discuss in the thread about the phone :) I will answer all the questions if you have any!

Here is Android authority's review if you want to read it too to get more information about the phone:

Thank you for this review, it will help me decide if i should buy it or not.

I'll wait until I start seeing awesome ROMS for it and see where the development goes with it before buying it. Coming from an OPO, it might be time for me to upgrade.

You spelled "3rd" wrong, by the way.

I don't know if my purchase for the OPT was worth it but then again I bought it in September. The stats are pretty good compared to the OPT but its a shame that they took out the sandstone back.

The OPT wasnet that great to be honest, but I can promise OP3 is A LOT better than OP2/other phones on market right now.

Check the speed test links! Dont forget this phone costs \$400 not \$800 etc.

The OP3 fails to hold even 16 apps in memory, with default settings anyways. To anybody who is buying one of these phones, you can find a fix for this issue using a build.prop editor. Follow the instructions here:

<http://www.xda-developers.com/how-to-fix-the-oneplus-3s-memory-management-almost-double-the-apps-in-memory/>

My two phones are in Kentucky atm, and so are others'. I'm really excited.

Hello Minimalist, I heared it's because it is like "hard" power saving mode or something like that. But correct, you can fix that if you rooted your phone.

haha, they are so good so you cant only have 1, you just got to have 2 ?

Enjoy them!

Thanks for this thread, Durham. Seems like an interesting phone.

Would be perfect for me if it could run Silent OS. Hardware blows the Blackphone 2 specs out of the water.

Never heard of Silent OS acutally :P

They will release tons of roms soon probably :)

No, I am not on a OP3. I wish I was.

But I know everything about it and I have friends who has it.

Edit:

Added how to intall cyanogenMod 13.

LinksysBroadbandRouter - June 20, 2016, 11:45 am

Paranoid Android is out for the OP3.

Silent OS...

lol built on CyanOS, but includes Gapps.

You'd be better off running Cyanogenmod and installing only the services you need from Google with bundled google apps.

Furthermore, I'm sure Sailfish OS will come to the OP3.

<http://forum.xda-developers.com/oneplus-x/development/rom-sailfish-os-t3322567> (Probably will be updated for newer devices considering the OP X is not obsolete.)

Parks - June 20, 2016, 3:12 pm

I would of got this phone in an heartbeat if it was supported by Verizon.

MrNacho123 - June 20, 2016, 4:03 pm

There are three things I absolutely love about this phone

- 1) Oxygen OS is pretty much stock with some acceptable tweaks
- 2) Easy as fuck to root and install TWRP. Even more modification options once you get TWRP (Like the option to install CM or any other ROMs)
- 3) Carriers can't bud in and modify the stock OS like Verizon does with the Galaxy devices

Beautiful design, fastest fingerprint sensor that I've ever used, and it has gotten my friends with iPhone 6S' drooling. Battery life is a mere "eh" - my mom's old OPX got around 7 hours of SoT. It is, however, better than my OP2 which got 3 hours of SoT MAX with my usage.

My only gripe about this phone would be the screen. OK for casual use, but the purple smearing of the R+B subpixels kills apps like BaconReader. Also, I can't wait for the OTA to roll out. That'll change the profile to sRGB.

Freddy Kru?ger - June 24, 2016, 12:24 pm

Seems like such a savage phone, my damn PC doesn't have 6GB ram. Maybe I'll try to get one when my Xperia Z2 kicks the bucket.

I can try it but I'm not sure why you'd want to encrypt a phone that's on any ROM from Cyanogen.

Because the stock Oxygen OS doesn't allow for full-disk encryption? Unless I'm missing something?

I handle sensitive data regularly for work and need a safe way to store such data on my personal device. I consider full-disk encryption a necessity.

what do you think about the battery? if you fast charge often it will degrade faster. is it possible to replace? or is it not that easy.

It's possible to replace the battery. If I recall correctly, there's not much adhesive tape attaching it to whatever's on the underside so it should be pretty easy to undo the screws, suction cup the aluminum from the screen & device, and then find your way into the battery connector.

Ye I would personally choose the OnePlus 3 over the Nexus 6p. The OP3 is abit faster.

But if you want a bigger screen phone with higher resolution the Nexus 6p is perfect.

LG G5 is in the same price range and it is a pretty cool phone, also the huawei p9 is a very good phone too.

if you have more questions, feel free to ask me ? Im glad you like the thread :)

Axon 7 is generally considered as a great alternative to the OP3, it's an S7/OP3/6P hybrid.

Billie Joe - August 16, 2016, 3:22 pm

im coming from an LG g3. i think it has a 1440p screen so idk if i would notice the difference.

i feel that the axon would have a poor warranty support.

not sure about the op3 or nexus 6p

cheers.

Hey,
Went to a Oneplus one to a Oneplus three. So far this is awesome, but i have a little problem :
First, the amoled screen shows whites as slightly yellow.
Second, the SRGB mode is trash for me. I don't know about you guys but this is just a yellow filter.
Finally, I can discern very slight yellow vertical bars, 2cm wide, when on a Grey color, for exemple Google Chrome without tabs.

If someone got some tips, they are welcome. Thanks!

It's like that by design to keep malicious apps from clickjacking and making you allow their malicious apps to do malicious things.

Seems like you can select if you want doze or not now. And the bluetooth got better with the latest update too.

If you haven't updated to Version 3.2.6 yet I recommend you to do it.

Quote:What's new:

Optimized voice call quality of some IM applications

Improved adaptive brightness performance

Improved camera quality

Fixed occasional green/yellow issue

Optimized white balance

Improved 1080p video recording

Addressed some bluetooth connection problems for vehicles

Allows third party application to modify ringtone

Optimized battery consumption when scrolling

Optimized touch accuracy when playing games

Added DozeMode switch in Developer options

Added PocketMode switch in Display settings
