I can relate, but if you built the project yourself you wouldn't be in that situation.

Desolate Night - June 17, 2016, 4:56 am

Coding can be pretty much learned. In this day and age there are lots of resources online and all you need pretty much is willpower.

Hmmmm. I think I might just get drunk and drool a bit. Just embrace the retard and then try evolve tomorrow.

This is true. I guess it's easier than teaching a quadraplegic to play chess...

Anarchist07 - June 17, 2016, 5:06 am

If the retard checks out code.org I'm sure he or she will learn fast because that's the simplest form of learning to code that it's boring.

DARPA - June 17, 2016, 5:11 am

Oh I'm sure there are many wheelchair accessories for ease of use. What I'm saying is it takes 11 lines of code to draw a fucking square....which is ok, but still like teaching a retard to breathe in and out.

(Jun 17, 2016 04:47 AM)B3A5TM0D3 Wrote: [\[CITE\]](#) It's actually more like a semi-retard trying to teach a complete retard to knit a sweater. I mean by the time you import the thing you know about 1/200 of its actual modular capabilities and then you ask it politely to perform a tiny fraction of those capabilities and then after it throws an error message because you forgot to ask it politely enough it then has a fit. Then after some re explaining you get it to MAYBE thread the needle, then you need a rest. Then your retard has a seizure. So basically you need to be a rehabilitation specialist in order for the retard to pay attention for more than half an hour. Discuss ?

I'm not entirely sure why, but this shit made me laugh so hard. Especially the seizure part.

Yin Yang - June 17, 2016, 5:51 am

I understand what you mean. It's frustrating at times. I hate debugging, and then fix one line of code, and the other line is broken, and you have to fix syntax errors. Then you have logic errors, though it sort of makes sense to you.

Ohhhh the old infamous "logic error"....that's basically when the retard shits themselves...?

Mr. Corleone - June 17, 2016, 6:05 am

Haha I didn't understand what you meant first, but yeah coding is pretty easy.

It's like learning a new language, it takes some time and practice.

? **[(1000)\$]** ? - June 17, 2016, 6:09 am

"Coding is like teaching a retard how to knit a sweater...." LMAO that made my day! hahaha

??? funniest shit I've read today. We all love and hate those retards.

Dontkillmepls - June 17, 2016, 9:01 am

I can't relate about the coding part but I have tried to teach a retard to knit a sweater

Mix - June 17, 2016, 9:32 am

Some people are good at some things some aren't using the word retard inst really the best word to use for the term but hey we all find some things easy and some things hard so keep that in mind.

Well, I was in programming club last year (I taught more than the teacher) and yes this is very accurate.

Then they end up just throwing the needle out and when you're back they're like "What's a needle?".

Well now you know what it's like to code. Also maybe you got a warm fuzzy feeling. With coding it's more like an anxious black hole. Lol
