Features.

Spoiler [\(Click to View\)](#)

Features:Own Captcha system.

Free updates for future versions.

Lightweight source.

MySQLi connections.Secured, reliable & fast.

Included payment gateway.

Manage your generator from your admin panel.

Remove after X generations.

Bitcoin & Paypal payment gateways.

AJAX Account generating.

Manage each plan, how much accounts it can generate per day, price & expiring.

A lot more+

Source Updates.

Spoiler [\(Click to View\)](#)

Source Update [1.1]Added additional checks.

Now its faster and reliable.

More+

Source Update [1.2]

MySQL tables were changed.

Added,removed & replaced functions.

More reliable source.

Code was changed from scratch to the bottom.

Added paypal payment gateway.

Source Update [1.3]

Added 1 new MySQL table.

All user generates are logged.

Some bugs are fixed.

Added new feature: Can limit plan generates per day.

Source Update [1.4]

Delete generation category and all accounts from there.

Fixed one little bug with purchases.

Source Update [1.5]

Added logs table table. Log all logins.

Enable & disable IP lock per account.

Enable & disable deleting of account after generation.

Fixed 2 bugs.

Added meta icon.

Source Update [1.6]

Fixed 2 bugs.

AJAX account generating. Click the generate button, without refreshing the account will be showed.

Added Bitcoin payment gateway. It's automated. - No more supporting this feature!

Enable & disable payment gateways.

Delete account after X generations.

Flag account as invalid.

No more page freezing. Now you can pick up the showup results in page.

New news, dashboard profile and purchase design.

New admin panel design.

Source Update [1.7]

Fixed 1 bug.

Select option for flagged accounts.

Remove all tickets option.

Improved paypal gateway security.

Some template changes.

New help guide is added.

Recover password page.

Copy-to-clipboard(copy account button) is added.

Improved security and speed.

Bitcoin gateway is removed for this update.

(Oct 28, 2015 03:10 PM)A???????cFX Wrote: [\[CITE\]](#) AuthenticFX's Review

Layout: Clean and flat, I dislike the fact that the admin panel is separate. Would be better if it was integrated with the main panel.

Security: The security of this product is good, I noticed with other generators XSS vulnerabilities with their news/support system, but this one works differently so I have not seen any yet.

Security: The security of this product is good, I noticed with other generators XSS vulnerabilities with their news/support system, but this one works differently so I have not seen any yet.

Bugs: Only found 1, that's with the -> Profile tab it just goes into an infinite loading screen but I'm sure it's just that OP forgot to have the loader end.

OVERALL : 9/10 !

+Loader problem is solved now!

(Nov 3, 2015 02:17 PM)NUFC Wrote: [\[CITE\]](#) NUFC'S Review / Vouch

I received a review - vouch copy of this product. Below is my personal rating on all aspects of GENERATOR SOURCE V1.5

My rating is based on a 5 star rating system.

Setup instructions given and my experience on setup

This script comes with a 6 step install guide and being totally honest it took me 4 minutes to setup as it even comes with its own installer.

No need to import the SQL it does it for you. Everything is right to the point with no messing around.

Ease of use

There is nothing to it really. If you know how to navigate a website and know how to read there is nothing to it. From adding account's, Editing users to enabling IP restrictions and deleting used combo's. Everything is just a click of a button.

Features

Yes it has another 5 stars it has everything I need in a generator and just to name a few of the most important factors for me personally is IP lock prevention, Deleting account's from the database after use, Account expiration and generations per day.

Value for money

I honestly think this product is worth more than what the seller is asking and a worth every single penny.

Overall rating

This product gets the whole 5 stars as I can not find anything at all wrong with it. I have even run a few tests with my kali box checking the security and can't find any flaws. This product has my full support.

Please note this is my personal review. The review is based on what I personally look for in this type of script.

Different people have different views so I can only speak for myself.

citsejaM - July 10, 2016, 12:49 pm

Vouch for Xez, he's a great coder.

Bluffer - July 10, 2016, 7:16 pm

Vouch for Xez (I still refer to him as Rex)... I'm surprised this is the first time I've seen this thread but I can definitely vouch for Rex, I've known the dude for some time now and have been discussing this source with him for some time now. I'm very happy with this source and hope to see even more improvements. It's just disappointing that I'm not allowed to sell my generator on HF anymore.

Don't hesitate to buy!

asedwjdawwq - July 10, 2016, 7:57 pm

Didn't AccountGen get hacked because of a vulnerability in the source?

(Jul 10, 2016 07:57 PM)Uberity Wrote: [\[CITE\]](#) Didn't AccountGen get hacked because of a vulnerability in the source?

accgenerator (bluffer's gen) was hacked way back ages before he used this source, and the hacker reposted the old dump.

No site with this source has ever been hacked.

Bluffer - July 10, 2016, 8:23 pm

(Jul 10, 2016 07:57 PM)Uberity Wrote: [\[CITE\]](#) Didn't AccountGen get hacked because of a vulnerability in the source?

A small database when the site had around 600 users was compromised in July 2015 and we've had no db compromises AT ALL (not even when all the other generators were hacked) since then.

In comparison the site now has over 9100 total users registered so most aren't affected at all.

Xez - July 10, 2016, 8:27 pm

if parameters aren't being sanitized in 2016 people honestly deserve to get breached just for negligence and just curious does pheonixsource have anti csrf tokens and PDO to protect against SQLI? you should add heavy security into it if security wasn't in mind when creating it.

citsejaM - July 12, 2016, 12:15 pm

Honestly, i consider your reply post boosting, he has provided a live preview so you can go ahead and test for vulns yourself, Xez is a great coder and what makes you think he isn't using PDO? What makes you think he isn't sanitizing user's input?

Xez - July 12, 2016, 6:17 pm

To be fair, I did not code this (I bought the project after it was completed), but I checked and everything is correctly sanitised and prepared queries are use throughout the application.

If it was insecure it would have been hacked like every other gen script out there.

it's not a post boost(if it was my post would of been alot shorter) it was in regards to the discussion above about past generators(maybe me quoting his post confused you on what I was referring to) being breached I just wanted to make sure Xez covered any loose ends to ensure the security of any generator service that decides to use his source, alot of past generators sold seemed to have SQLI in the sources which doesn't make sense to me at all in this day and age, alot of them were

found with simple static analysis.I also didn't notice the live preview.
