Thread: [>> Free Hacking Programs << Intrusion Detection System And The IDS Tools](#)

**muroseu** - June 21, 2016, 2:06 am

All information in this tutorial is for educational purposes only. One day when you grow up you might realise that you have been a skid, by using mass-deface techniques and SQLi for your entire life. Do not just hack a site because it is there.

Ethical hacking and online security involves a lot efforts. Many tools are used to test and keep software secure. The same tools can also be used by hackers for exploitation. Becoming a hacker is not easy it requires many skills. You can learn a few hacking tricks from free hacking tutorials online, some really cool hacking books and books on information security . However, Along with all the skills you need to have best tools to perform hacking, security threat analysis and penetration testing.

A hacking tool is a computer program or software which helps a hacker to hack a computer system or a computer program. The existences of hacking tools have made the lives of the hackers much simpler when compared to the times they did not exist. But it does not mean that if the Hacker is equipped with a good hacking tool, his entire job is smoothly done. The hacker still requires the skills of all the aspects of hacking equally well.

An Intrusion Detection System is a software application or a device which is equipped to do network or system monitoring activities for any malicious threats and sends reports to the management station. Intrusion detection tools can help in identifying potential threats which can be dangerous for the system or the network.

## Snort

It is an open source Network Intrusion System as well as a Network Intrusion Prevention System which is free for all to use. It was created in 1988 by Martin Roesch. It has the capability to perform packet logging and analysis of real time traffic on networks which are using the internet protocol.

## NetCop

NetCop is an advanced intrusion detection system which is available practically everywhere. NetCop makes use of a specific method to classify the spyware. This is because there are several software programs which intrude your privacy and which have different kind of capabilities. NetCop gives a distinct threat level to each program, thus classifying the threats.

[Web Vulnerability Scanners](#)

I could only add a little, because 8000 letter limit.

I'm gonna make a thread for each one separately just so i can add pictures later on.

I'll be doing a different post on other subjects too. You can find all the posts in my Threads in my profile!

Please leave a comment what you think about this and hope you liked it!
