Thread: [Cheat Engine Trainer To VB.Net](#)

L33TPr0xY - June 23, 2016, 3:00 pm

I need some help on making a VB.Net Trainer. I tried many tutorials on YouTube, and non of them worked.

Windows 10 store: Judge Dredd vs. Zombies

you found all the memory addresses, you just need to edit them with writeprocessmemory

there are some tutorials, you just have to look - gl

Jallu - June 25, 2016, 4:15 pm

1. Get pointers to whatever you need to edit.(Memory)

This seems to be where you fail. Just look up on how memory is structured/how it works and try to understand it

2. Open handle to process, then WPM(WriteProcessMemory)/RPM(ReadProcessMemory)
etc
