Table of contents

Antivirus
Firewall
Anti-malware
Anti-spyware

Introduction

Quote:What security software should I use? What anti-virus is the best? How about a firewall? And what about spyware? Should I use one of the all-in-one packages that claim to do everything? Is there anything else I need?

As you might imagine, I get questions like this all the time. As a result, I do have recommendations for security software and techniques to stay safe!

Why you need antivirus - What is antivirus?

Antivirus software detects, and then prevents, disarms or removes malicious programs or malware, often referred to as 'viruses'. Antivirus doesn't offer a perfect solution to the problem of malware, but it is a critical first step to securing your PC or laptop. To help prevent viruses infecting your PC you must install antivirus, and then regularly update your antivirus software.

What is Firewall?

A firewall works as a barrier, or a shield, between your PC and cyber space. When you are connected to the Internet, you are constantly sending and receiving information in small units called packets. The firewall filters these packets to see if they meet certain criteria set by a series of rules, and thereafter blocks or allows the data. This way, hackers cannot get inside and steal information such as bank account numbers and passwords from you.

What is Antimalware?

Antimalware software protects against infections caused by many types of malware, including viruses, worms, Trojan horses, rootkits, spyware, keyloggers, ransomware and adware. Antimalware software can be installed on an individual computing device, gateway server or dedicated network appliance. It can also be purchased as a cloud service or be embedded in a computing device's firmware.

What is Antispyware

Anti-spyware software is a type of program designed to prevent and detect unwanted spyware program installations and to remove those programs if installed. Detection may be either rules-based or based on downloaded definition files that identify currently active spyware programs.

The following products I would advise to anybody!

Antiviruses

[Avast](#)
[AviraAVG](#)

Firewalls

[Tallemu Online Armor](#)
[Comodo](#)
[Zone Alarm](#)

Anti-malware programs

[alwareBytes AntiMalware](#)
[Bitdefender](#)

Anti-Spyware programs

[spybot Search & Destroy](#)

Other

[Ad-aware \(free anti-adware\)](#)
[CCleaner \(run this often to clean your registry and other temporary files etc.\)](#)
[KeyScrambler \(ultimate protection against keyloggers.\)](#)

But remember, your best defense is simply being careful!

Sadistic - June 24, 2016, 12:17 am

Im cool so i use Eset NOD32 (am i rite guiz?)

cheese__007 - June 24, 2016, 1:22 am

Seen this how many times..NOTHING BUT A REPEAT....can you tell user's how to set....its easy to post free shit

Frankey - June 24, 2016, 1:26 am

English.exe is not responding ...

What fo you Mean?

HQ thread mate! I use Avast and it works great.

(Jun 24, 2016 01:22 AM)cheese__007 Wrote: [\[CITE\]](#) Seen this how many times..NOTHING BUT A REPEAT....can you tell user's how to set....its easy to post free shit Again?

cheese__007 - June 24, 2016, 1:30 am
its easy its calld fk u nzi gramist

Frankey - June 24, 2016, 1:32 am
(Jun 24, 2016 01:30 AM)cheese__007 Wrote: [\[CITE\]](#) its easy its calld fk u nzi gramist Really.... I'm not a grammr nazi. I'm not even good at it. But you just suck with it. Thanks for calling me a nazi though. Greatly appreciated.

cheese__007 - June 24, 2016, 1:35 am
didnt mean no offence to anyone but if your showin free stuff atleast show them how to set.....nothing but luv frankey

Frankey - June 24, 2016, 1:37 am
(Jun 24, 2016 01:35 AM)cheese__007 Wrote: [\[CITE\]](#) didnt mean no offence to anyone but if your showin free stuff atleast show them how to set.....nothing but luv frankey He is just showing he's personal opinion about anti viruses and giving out some great recommendations.

"atleast show them how to set...."? What do you mean? Do you mean?: "atleast show us how to set them up"?

cheese__007 - June 24, 2016, 1:41 am
how many time has a HERES A FREE....come on....i just got here from another forum and im already hatin it...teach ppl...like how to set comodo...etc

this is a sadexample of free shit...!!! yes imm new here but this guy dont know shit

Nuworld - June 24, 2016, 3:43 am

Then why don't you show us what you know? and maybe help.

Iwata - June 24, 2016, 3:48 am
Thats literally making a thread about use hf and not google

AcroClipz - June 24, 2016, 4:55 pm
You can't be serious with this thread when calling it "security softwares" ... These softwares and firewalls you so greatly recommend doesn't protect against todays advanced cyber criminals and threats.

- 1.) Windows 8.1 OS (Gaming) Tails OS (Computer Use)
- 2.) Bitdefender Internet Security (System Security Software)
- 3.) Blancco Computer Data Eraser (Data Destruction Software)
- 4.) System Mechanic Pro (System Maintenance Software)
- 5.) HitmanPro.Alert (Anti Malware Software)
- 6.) SpySheltet (Anti Keylogger Software)
- 7.) Strixus Firewall (Mostly Advanced Cyber-Security Software)

- 1.) Sigaint Mail / MyMail (Anonymous & Private Email Providers)
- 2.) Kali Linux (Advanced Penetration Testing Tool)
- 3.) Nessus (Network Vulnerability Scanner)
- 4.) Wireshark (Network Protocol Analyser)
- 5.) Snort (Network Intrusion Detection System)
- 6.) Netcat (Network Utility Tool)
- 7.) VCPoVPN (Anonymous DarkNet SSH/SSL VPN)
- 8.) Tor Browser (Anonymous DarkNet Web Browser)

Death LurkZ - June 24, 2016, 6:02 pm

I like Malwarebytes, Malwarebytes anti exploit, MBAR (malwarebytes anti rootkit), SAS is ok.. (super anti-spyware), adwcleaner is good, roguekiller is good.. or you could get sandboxie and watch your porn through a sandboxed browser. And only run sketchy programs on a VM...

muroseu - June 26, 2016, 4:19 am

Hey guys calm down.. I'm just trying to help others.. If its too much i can ask a mod to take this down ffs.

swftclassic - June 26, 2016, 7:53 pm

cheers for this, good stuff

Shinzawai - June 26, 2016, 8:18 pm

thanks for sharing. i dont recommend bitdefender.

Ancient Rat © - June 28, 2016, 6:00 am

My setup on Windows.

ESET Nod32 (Premium)
Malwarebytes (Premium)
Malware Anti-Exploit (Premium)
Comodo Firewall + DNS (Premium)
Keyscrambler (Premium)
Panda usb Vaccine
Malwarebytes AntiRootKit

other application that i recommend to use is ccleaner.
clear junk / startup / registry

Web Browser - Firefox - extensions
Ghostary
ublock orgin
NoScript
WebRTC-Disabled
Https-Everywhere

Canvas-Fingerprint
Browse-sec
Bluehel-Firewall
Lastpass

+ i really suggest -settings block javascripts and adobe
and the most important is common sense always sandbox.

sites that i frequently use
virustotal.com - Disturb.
virusimmune.com - Doesn't Disturb.

for search engine i really recommend
duckduckgo.com/

Pravy - June 28, 2016, 12:30 pm

This threads grammar is completely inconsistent, obviously, OP you have just copied and pasted from the internet or another thread somewhere else and then written the titles yourself.
