Thread: [Debian 7 LAMP error](#)

Fluppy - June 24, 2016, 7:15 pm

Hey,

gyazo . com/fc2167475b529f2eb432b96051cce26a

Could anyone please tell me how I can fix this issue? :(

Thanks in advance! <3

i384 ~ - June 24, 2016, 7:36 pm

Hey there!

This issue normally occurred when you have not installed "mysql-server", it also might be a corrupt install which should be solved by removing it, and do a new install of "mysql-server".

If the process stated above doesn't solve the issue, try installing htop, and thereafter check to see if the mysql process is running.

Regards,

Can anyone who know how to install this correct please do that for me over teamviewer? <3

Zedz - June 25, 2016, 12:21 am

hey i had the same issue with that, ill PM you what i did to fix it

?Fetz? - June 25, 2016, 7:19 pm

I can help you if you want. Just shoot me a PM.

Never the less, try this:

Code services mysql startor

Code /etc/init.d/mysql start

If the above doesn't solve your issue. Use these commands to reinstall mysql-server completely.

Code apt-get remove mysql-server

apt-get purge mysql-server

apt-get install mysql-serverShould fix your issue.
