[\[url=http://www.univexnet.eu\]](#)

Greetings,

coming to offer some of our hacks currently available. We're currently offering external trigger bot & ESP. Both hacks come with a slot cap set at 125 slots.

Both hacks are guaranteed to be undetected on VAC/MM. At the time when we are offering those hacks, they are undetected. In case of detection, customers won't be able to login for their own safety & the hacks will be rewritten to be undetected again.

TriggerBot

Undetected since September 2014

Unique build is generated every 30 minutes

Profile system & config for each weapon

Offsets are synchronized from server, no need to update your .exe on each CS:GO update

Custom hotkeys, custom preshoot delay / delay between shots, burst fire mode, ...

Pricing starts at 8.99€ / Month or 39.99€ Lifetime (high lifetime price due to the hack being sale capped)

Much more, visit [product page](#) for additional information & screenshots

ESP

Undetected since February 2015

Offsets are synchronized from server, no need to update your .exe on each CS:GO update

Shows info such as (Name, Health, Distance, Weapon, Money, Armor)

Option to draw only red dot on enemies chest

Uses external overlay, can be used while streaming without getting noticed

Requires Win7+ & Aero enabled (plus Fullscreen Windowed CS:GO mode)

Pricing starts at 8.99€ / Month or 39.99€ Lifetime (high lifetime price due to the hack being sale capped)

Much more, visit [product page](#) for additional information & screenshots

Anyone looking for a safe cheat to rank up easily in CSGO, this is the ideal choice to stay undetected & not being suspicious while hacking, since both of those hacks provide the ideal advantage to rank up easily.

I'm also providing special offers for people interested in getting both hacks at once.

I will give out few trials as a vouch copies, anyone interested, please let me know! :)

If you have any questions regarding the hack(s), please feel free to reply or PM me!

Forum is now launched aswell, link [here](#).

Every user is receiving an unique build every hour. You can view your build info in your account

dashboard, together with MD5 and Build Date.

Any proof that the cheat has been undetected (the triggerbot) for that long time? I might be interested.

LilDurk - June 28, 2016, 4:29 am

Could you hand me out a vouch copy, please do Pm me I'll write a good review.
I've been playing CSGO for a few years now so I guess I could help.

Your triggerbot doesnt work on FaceIT?
inCross much lmao

UniveX - June 28, 2016, 5:24 am

I've sent PM to both of you regarding the vouch copies. :)

And sadly not really sure how I could prove that it's out for 2 years without detection, if anyone has some idea, feel free to tell me, I'll be happy to prove it. :)

Yes, it is incross, it's not a secret, no need for this behavior. :)

Got a Vouch copy for two days. It is working amazingly! Definetly going to buy this once I got the money! :D

Crosshair ID based triggerbots don't work in FACEIT.

ESP supports FaceIT aswell

If I'm reading it right he said that the ESP supports FaceIT, not the triggerbot.

Exactly, trigger does not support FaceIT, but ESP does, even when the range is reduced compared

to normal servers.

Sorry if it's unclear.

Review:

Functionality 10/10

The cheat works as it is described, it's smooth, and you can't go wrong with setting it up, both the ESP en Triggerbot are well made.

I've been using this for over one day now and to my surprise, no one has called me a hacker yet in the game, they just assumed I'm a smurf.

The functionality of the cheats is as described.

Support 10/10

I added UniveX on Skype, he always replied within 1-2 minutes.

The support of this cheat is awesome and so is the creator.

Easy to use 10/10

All you have to do is login; press enables ESP, and you are ready to go!

For the Triggerbot you don't have to do anything just press the insert button, it's as easy as that.

Overall 10/10

Untill now I've used a dozen of cheats for CSGO and this is by far the best one I have used, if you are having trouble gaining ranks and you want to make it look legit then you should use UnivexNet!

However, if by any chance I get banned I will update this post.

I took the risk of playing on my account with 2 knives as I trust the creator.

Since there are limited spots, you should get it as soon as possible.

You will regret it if all the spots are sold out!

Vouch for this hack from UniveX i have been use the trigger since 2014 and it's still undetected, but i change from trigger to ESP cuz i wanted to try something new and what can i say undetected self updated and works really good, i recommend everyone in this forum that want a really good working undetected hack then buy this.

Donzha - July 2, 2016, 11:23 am

Got a vouch copy the other day and tested on one of my accounts and it's a nice clean cheat. Haven't gotten any VAC errors and doesn't look like it's detected. Haven't had any problems definitely would buy if I ever needed a cheat :D

PingersAndMash - July 3, 2016, 4:49 am

Bought this to try, easy to setup each weapon gets its own setting never seen this in a triggerbot.

I bought it and it is good and easy to use. Would recommend it to people looking to buy cheats.

Also, are you ever planning on adding more features for sale like aimbot, spray control, etc?

Flamingo - July 14, 2016, 5:12 pm

Bought the external ESP / Wallhack earlier today, and have to say, definitely not disappointed.

If you're looking for something to bring you victory and give you a good advantage in your games, this is definitely it.

Decided to play a few regular matches to get a feel for it and see how it was, but it was very easy to get to learn and use.

The simplicity of it is great. Then I decided to go in and do some competitive gameplay, both matches were easy victories.

I actually felt like I had to tone it down and die on purpose.

My review of this product:

The hack itself

The hack works great, haven't had any issues and was using it over several hours, without any bugs or issues.

Truly worked like a charm, so easy to use, and of course if you aren't blatant about it, no one will suspect you, I easily pulled off a 16 / 4 / 4 score.

Had to fake my death like three of the times to not appear suspicious. People just suspected me of smurfing.

If you do actually know how to play, how to smoke / flash / nade, how to aim, you will truly just appear as a smurf with this.

Simplicity

The simplicity of the ESP / Wallhack, is stunningly beautiful.

You really just need to load it up, login, pick what you want to see / not see, and hit enable.

That's all, and you're good to go.

Pricing

"Pricing starts at 7.99€ / Month or 25€ Lifetime"

Insanely cheap in my opinion, especially considering what you can do with this and the advantage it provides.

Decided to only go for one month to try it out at first, if I continue to be as pleased with it by the end of the month, I'd love to switch over to lifetime.

Support

I had to message UniveX on HF because I was a bit dumb, however he was happy to help and replied within minutes.

Was honestly a bit surprised he was that quick to respond, also seemed like he was very happy to help, so definitely a big plus.

Summary

My rating of this tool: 9/10

I am greatly satisfied with this product, it is in no way disappointing and truly provides everything it should.

It has plenty of settings and options for you to play around with and enjoy, all being very great and something useful.

However, a thing I would love to see in this, would maybe be an option to change the color of the boxes.

As well as an option for the boxes to change colors once the enemy is actually visible.

These two are of course in no way a must or a need, just some nice features that I'd find useful.

Either way, a very great tool and a good purchase in my opinion.

Definitely a happy customer here so far.

I've got another project coming up, but it is far from finishing, since I work alone on Forums, website, licensing soft & the hacks themselves, but yes, I've got a bigger project coming, but can't tell when at the moment. :(

Thanks for the kind words.

I've bought a month of both of the cheats and i have to say i am impressed.

The ESP works in an amazing way and its a pretty grab-n-go cheat and i am very much impressed.

The triggerbot is just great, there is no doubt in my mind this will not be detected for a long time. As long as you're not stupid and coming around the corner and shooting instantly, this will be the best hack for not getting banned.

The dev, with all of the problems i've had, are fixed within max 5 minutes and he is always very nice and constantly on skype.

Best cheat i've ever used.

Just wanted to leave a review after about 3 weeks or so..

Setup was easy any new person could get the hang of this. Settings for something as simple as a trigger bot makes this by far the best trigger bot I have ever used. You can custom your settings for each weapon which makes it great for one deag's and such. I do recommend this to anyone that just wants a standalone trigger bot without worrying about getting detected or if its not going to be updated. The second an update comes out since it instantly gets fixed. And Univex is always around if you have questions.

Overall- best cheat and easy to work with. Coder is awesome and you wont be let down!

The triggerbot is undetected on MatchMaking. It won't work on FaceIT since the triggerbot is in cross. Not sure about ESEA but it is probably not working their either and also detected.

Big vouch for the cheat though ;)

Hello,

sorry, missed your post. Currently you can't disable it for certain weapons, but I guess I could add it in next update after I solve more things, quite busy rn.

You'll have to stick with hotkey, if you don't want it to work with all weapons at the moment.

As for deagle, you need higher delay, try to go with 150-250, that will make it useable (delay, not pre-delay) just fine.

Have a nice day,
UniveX

Currently working on a whole new site & licensing system, after this is done, I've got a new CSGO Hack base prepared that I worked on some time ago, and part of it's features will be trigger supporting FaceIT & bhop aswell.

I sadly don't have any ETA right now, as I work on univexnet alone, it takes me some time to finish stuff.

Current trigger is just for VAC3/MM & ESP is working on FaceIT aswell, but range is limited compared to normal servers.

(Nov 5, 2016 05:55 PM)HopNScam Wrote: [\[CITE\]](#) any videos??? and proof of undetection I've used the ESP for four months, on my main account, no issues or any detection, so far I'm loving it.

Managed to go from unranked to Supreme in that time, no one really suspects me, there's always those few people that are mad at you for being better, but no one has suspected me of using hacks of any sort. As long as you play it smart and aren't blatant about it, you should be fine.

I decided to recently purchase the trigger as well, works flawlessly in my opinion, haven't had time to play around with it too much and the settings of it, but the standard settings it comes with, actually works pretty well, but as before, haven't had anyone suspect me of cheating, people were raging at me when I joined a 1v1 server to test out the trigger, but when I told them I was supreme they were all just like "Oh.. Makes sense."

I received a 1 day trial of this amazing product from UniveX and will for sure be purchasing as soon as I can. This is a non-biased review and I was not told to review the product. I have played 2 MM matches at 2 different levels and have not yet been called out using this software.

Functionality: 10/10 Everything in the cheat works, every setting is useful and can provide with different ways to use the triggerbot. As for the settings, triggerbot customization is amazing. It allows you to choose burst/spray and custom delay times.

Features: 9/10 I give it a 9 because I don't believe it has a afterspray timer. Otherwise the cheat has custom settings and delay times, profiles for different configs, and options when the bot will shoot.

Undetectability: NA I haven't been able to test this one, but I believe UniveX is telling the truth about his undetectability streak. When you download the client, every time it should be a different hash/signature for undetection.

Prices: 30 EU for Lifetime on Triggerbot and 25 EU for lifetime ESP. You cannot beat those prices when it comes to cheats. What you pay is 100% worth it.

Performance and FPS: 10/10 I was worried that the cheat would ruin my fps like many other externals. I was wrong. While playing with UniveX I saw the exact same fps as I normally do. 80-110 on my PC. Cheat should work great on every system.

Overall: 9.5/10 You cannot go wrong using this software. It is an extremely high quality product made by a great dev. I can't wait to purchase and become a part of your community ??.

Huge vouch for this product, can't wait to buy!

Have a nice day,

Simply Amazing.

I'm new to Hackforums, but I bought their ESP about 2 weeks ago. I fell in love with it and decided to get the Christmas lifetime package. (40 for ESP and Trigger bot). Unfortunately I play left handed, so the trigger bot key was swapped and it didn't work with my set up. However, when I contacted him. He was super nice and custom built me my own settings to cooperate with my play style. It's cheap and has great customer service. Would definitely recommend!

Bought the hack a couple of months ago,
All I can say is that I was really satisfied with this because I bought it when they were many updates,
He updated the bot like 1-2 hours after steam finished theirs.
Hacks are really easy to use and very smooth!

User Review

So I have had UniveXNet trigger bot for I think about 6 months now and I have to say that the

customization in the features are amazing you can fine tune this bot to your liking!

He also answers all questions I have ever asked in a quick and timely manner.

His support is grade A for sure.

If you are looking for something to give you that edge out of the rest and also have great support then buy his services are what you need to do!

A fresh config is required due to new options for SoundESP & Glow.

UniveX - August 12, 2017, 10:01 am

UNet Update:

- Updated panel with unique builds per user, each user got 50 credits for free, one unique build is 15 credits, this build is only for you and can be downloaded at any time (you have to request a build, it will be done within 15 min, you'll be notified on site & by email)
- Each zip comes with a filebuild info and MD5 which you can compare to "public" download which is built each 30 minutes.
- You can build your own build at any time, just wait for it to finish.
- We are now automatically HWID locked, account sharing will lock the account & you'll have to reset HWID.

Also updated ESP to completely new version, groundup rewrite so it aswell supports unique builds now and uses different DirectX wrapper, screens available on Product page.

Vindicator has received some small updates that shall improve performance.

For more info, visit FAQ & Read tab about UniveXNet Credits & Unique Builds.

UniveX - October 12, 2018, 3:09 am

-- We have released a huge updated to our website and our projects.

Website)

We have launched a new website with complete overhaul and many many changes. Our site now runs on improved custom CMS and mainly responsibility of website has been fixed.

There is a complete design overhaul, together with adding some transparency about slots (you can now see on each product how many users have access to it and what is

the maximum amount of active subscriptions) - You can also see when the product was last updated.

User Panel)

Users now have a new user panel, where they can manage their account, their unique builds and HWID resets.

-- We made some changes to unique builds and HWID resets - Both are now free. HWID resets are possible once within some timespan to prevent account sharing.

- Unique builds are now free and built for every user every 1 hour approximately.

Software / Product updates

All of our three releases (currently) were updated to support latest website and together received performance updates - for example trigger bot now uses around

0,3% of your CPU, ESP is a bit higher due to overlay, but all of these were reduced by atleast 60% and their performance is much better.

ESP / Trigger

- Both of these were updated to support sig scanning instead of waiting for VPS to update needed info, meaning, it now works immediately after CSGO updates.

Vindicator

- Updated some bugs that have gathered over time and added some new features, CPU usage reduced by nearly 60% and improved overall performance of the cheat.

New Auth Module

- We have added new authentication module, which will keep all stuff up to date, new account panel has subscription info in it, with possibility to extend your subscription right from the client - or in case if it's expired, you can extend right away before logging in.

- You have real time notifications regarding your account on your desktop - if allowed.

- You are allowed to hide all GUI (in case playing on LAN, or something.)

- Much more for you to discover. :)

--Every user that had a subscription running while we were changing to new site has received free 15 days to their subscription plan.

Thanks for reading this wall of text & have a nice day,
UniveX
