Thread: [Python.exe and .py files opens calculator](#)

muroseu - June 28, 2016, 2:18 pm

So yeah.. tittle says it all..

Even if i open python.exe it opens a calculator.. i can't run .py files because it opens a calculator.. I've tried opening them in cmd and same thing.. I don't know whats the problem..

Goodies - June 28, 2016, 3:19 pm

Imao you fucked up and renamed the binary. Or you were fucking around with binary poisoning and injected a calculator into it. Open a command prompt and type this:

PHP Code

```
<?php
```

where python

Post the path.

i have done that like 5+ times. deleted all python files and reinstalled. still same thing..

ihatevim - June 29, 2016, 12:00 am

What an unusual error. Have you tried installing python3.5? Also has python worked in the past for you?

@beef - June 29, 2016, 12:55 am

This is really strange. wtf if reinstalling doesn't work then idk tbh

reinstalling windows. Because it works great on my linux machine

garkolym - July 2, 2016, 6:41 pm
Try to clean your regedit :)

Goodies - July 2, 2016, 9:26 pm
Something tells me you have malware... that's looking for "Python.exe"

muroseu - July 4, 2016, 1:26 am

Nope not malware. Scanned my PC with every fucking program and checked a lot of files/regedit etc manually

ihatevim - July 4, 2016, 1:37 am
Regardless of what it is, a format and reinstall of Windows/Your OS should fix it.

NCluke - July 5, 2016, 10:26 am
Since no one has asked, check the basics, are you sure your file association for python files is actually set to python? I assume you've tried to open python directly from the installation:
?C:\Python<XX>\py.exe

Does it do the same thing if you try opening it from CMD? "start ?C:\Python<XX>\py.exe"

You're not running any keybind/macro programs/hardware right?

muroseu - July 5, 2016, 11:32 pm
Edit: Reinstalled Windows 10 on the machine with python problems.

I have linux and windows machines

Grimm Reaper - July 6, 2016, 9:30 am
have u tried checking "gpedit.msc" ? :P (some of the policies might be altered and thus the problem? maybe >>)

05317832892 - July 6, 2016, 10:22 am
This is the strangest error/problem I have ever heard off.
