Thread: [Gambling Site - Partner](#)

Mr. Robot - June 28, 2016, 8:15 pm

I have been wanting to make my own gambling site for a while now, the type of site will potentially be a site like the following describes.

- Users join a room.
- Each user bets an amount, the total amount put it gets divided by 100 and each user is given his equal shares. For example

Player 1 puts in \$10

Player 2 puts in \$20

\$30 pot

Player 1 has 25% chances to win

Player 2 has 75% chances to win

Think of it like a raffle, player 1 owns 1-25 tickets, player 2 owns 26-100 tickets, the ticket drawn could be any.

Preferably your tickets could be randomized so player 1 has like 1,7,23,42,23 (so forth)

This could also give the house a 0.5% chance to win on all rounds or take a small cut of all winnings.

I need someone who can code something like this and who would like to be a partner on such a site.

Really really wanting to do something like this, if you have any comments or opinions just throw them below and we can talk about your ideas.

An?iety - June 28, 2016, 8:18 pm

Sounds fun, I wouldn't let the house win ever. Would take away from the fun. I would suggest that you have a system in place where you take a percentage of the withdraws or the deposits.

EDIT: Or take a small percent of each pot.

Yeah true that - I actually agree on that. Still working through ideas and thought I would bring it to HF to see what you all think.

I do think the cool thing is people will be able to join lobbys with their friends and play around.

GamersHeaven - June 28, 2016, 8:20 pm

You shouldnt post your idea like that, a coder can easily just do it himself and run his own site.

I do think the cool thing is people will be able to join lobbys with their friends and play around. I would certainly play. I'm sure you already thought of this, but have different rooms for different amounts.

Like a room for miniscule bets (100 bits to 500 bits)

Room for medium bets (1000 - 5000)

And of course the High Rollers (100,000 bits to 1BTC)

SIM-2908357 - June 28, 2016, 8:25 pm

I think that this could be a good idea as well if you don't have the most money to invest:

Player one puts \$10 in

Player two puts \$10 in

50% chance to win (good odds), and the winner gets \$19, you would take \$1.

Well if someone gets rich off my ideas, then good on them.

Scum, but good on them.

I think that's not bad, would help keep ads off.

mvmt - June 28, 2016, 9:41 pm

I've got some ideas and would love to partner up with you on this, I can do the coding. I've sent you a PM.

'Suicide - June 28, 2016, 9:43 pm

I'll provide you more information on suggestions and ideas in the A.M tomorrow.

(Off subject)

Have any luck in doing our bet?

Kenjataimu - June 29, 2016, 1:06 am

Im interested in this. Not as a coder though, but an investor.

LeetHost - June 29, 2016, 1:12 am

We're a team of developers and designers with over 6 years of experience. We can code it for you with premium design and customized features. If you've got investor or willing to put money into it. We can code it for you and will provide support and addition of features in future development.

Well my proposal is somewhat different than your requirement but if there are possibilities either way. You can contact us.

Cork - June 29, 2016, 2:23 am

This isn't a new idea, lol. Literally almost every cs:go gambling site has this.

Regulus - June 30, 2016, 1:23 pm

Sounds like one brilliant idea. If I had the budget I'd be down to do this.

h0lybyte - June 30, 2016, 7:36 pm

We could do something similar except incorporate it into our browser-based game (MMORPG / MMORTS) ; imagine being able to gamble through a game that works on xbox one, ps4, android, iphone, mac, unix, ect.. it even supports ms edge haha (instant lose using ms edge, wut?!)
