Thread: [\[Woocommerce\] How to get a specified attribute value from a product in a cart?](#)

hamahem - June 29, 2016, 5:12 am

As the title states, I'm trying to get a certain attribute value from a specified attribute name of a product. I mainly go through each product in the cart and try to get a certain attribute value. For example, a cart of mobile phones, having an attribute which is "Warranty" of values "yes"/"no". I need to get for each phone in cart the value of the specific attribute "Warranty" of slug "p-warranty", then do some logic after that.

I would really appreciate any tips, hints, or suggestions on this, and how to actually make it work.

Note: Couldn't actually paste the code here; blocked by cloudflare...

Thank you

Disclaimer: I have not tested the following codes/suggestions.

You could just list the attributes using the following code;

PHP Code

```
<?php
```

```
$product->list_attributes();
```

Then, proceed to copy the product-attributes.php file from the plugins/woocommerce/templates/single-product/ directory to the theme/theme-child/woocommerce/single-product/ directory to make your changes.

Or try the following code;

PHP Code

```
<?php
```

```
$warranty = $product->get_attribute( 'pa_warranty' );
```

Another suggestion is the following code (custom taxonomy);

PHP Code

```
<?php
```

```
$warranty_values = get_the_terms( $product->id, 'pa_warranty');
```

```
foreach ($warranty_values as $warranty_value) {  
    echo $warranty_value->name;  
}
```

If additional help is required as you did not provide any initial code, feel free to PM me.
