Thread: [Looking for experienced coder](#)

mvmt - June 29, 2016, 3:35 pm

Currently working on a project and I'm in need of an experienced coder who can help with a website. I don't want to give much info up, but I'll give brief explanations of tasks you must be able to complete.

User must: Have knowledge in online bitcoin deposits/withdrawals/wallets

Be able to create a user system

Have knowledge in online scripting

If you have common sense, you can form a logical guess as to what kind of website this will be. But I don't plan on giving out any more information unless we feel you are up for the job. Either post here or PM me if you are interested and we'll speak further about the job.

I am your guy. Python + Cryptomaniac here. I also know C, Java, and a little Haskell.

Do not let any asshole do this in PHP, that's what Mt. Gox did!

(Jun 29, 2016 06:47 PM)BitbyBit Wrote: [\[CITE\]](#) Yup code a web front end in Java definitely don't be vulnerable to anything. I said "I also know Java, C..."

I would not touch web with a ten foot pole in JVM.

That is a job for Django :)
