Thread: [SETUP * DARKTRACK ALIEN * HOW TO: GUIDE + DOWNLOAD](#)

bzr? - June 30, 2016, 5:36 am

Small Update

Although the Coder luckyduck hasn't been seen here for a while, it seems he's been hard at work coding the next version of DarkTrack (5).

Check it out here: <http://darktrack.net>

Given the timely release of DarkTrack 4 and in an effort to inform our community this guide is created in hopes of educating users on how to setup DarkTrack Alien

If you haven't yet checked it out, you can view the [thread here](#), or check out the [website here](#).

This guide will not go into details about the features or use of DarkTrack, but getting people up to speed on how to set it up.

DarkTrack 4.0 original download

Since the site is down and 4.0 is still a very usable RAT, here's the download (RAR password is 'dt94')

MD5 Checksum: 7afc28b47371fa3488352cd8c3ea818f

VirusTotal of exe:

<https://www.virustotal.com/en/file/51c0ba723e062c9e65544b37dafa7765ba0e56aa8f533915b3639e2649a81b65/analysis/1474809374/>

Download: <http://www107.zippyshare.com/v/fbhwMApY/file.html>

Setup checklist:

DarkTrack 4 ?

Open ports ?

Virtual Machine (optional) ?

A VPN (optional) ?

Stage 1: Settings

Assuming you have downloaded and extracted DarkTrack from the [official website](#), open it up and you will be greeted with this landing screen

Spoiler ([Click to View](#))

Take note of it's contents and move on over to the Client Settings tab

Spoiler ([Click to View](#))

Here we input our port and password for the controller.

Do so as follows - enter your port (in my case 4445. I will not be covering port forwarding here but you can test it [here](#).) and a password 'test' or another phrase of your choosing. Now press the little '+' circle after the port textbox and it should add the port you choose which can be seen above. It should now look something like this:

Spoiler ([Click to View](#))

For safe guarding purposes make sure that your Firewall and Anti - virus software are disabled as they will interfere with this programs operation!

Spoiler ([Click to View](#))

Stage 2: Building the server

Now our controller is setup we can create a server. Move over to the 'create server' tab and under profiles click 'Add profile'. Name your profile and you will see this screen:

Spoiler ([Click to View](#))

At the top, press 'Add IP address' and enter your IP and click OK. Please note that if you will be using this when connected to a VPN, enter your VPN IP instead. Alternatively if you're using a DNS this is the place to enter it. Otherwise carry on as normal. You can check your IP [here](#).

Spoiler ([Click to View](#))

Nice try - that isn't my IP.

The three boxes on the right signify from top to bottom: port number, password and client ID. (For future reference @LuckyDuck it might be worth labelling these so they are easier to recognise.)

So enter your port (4445) in the first, then the same password you used back in the Client Settings (test) and whatever you want your Client ID to be (Home).

That is connection settings complete. Below profiles you see another box containing the various stages that building the server involves, having just completed Connection Settings, move onto Installation. Note that all of these are optional and will probably affect the detection rate. If you do want installation and startup, fill out the relevant boxes like so:

Spoiler ([Click to View](#))

If not, you can move on. The next two screens; Additional and Security contain the persistence features of the server and Security contains anti features like Virtual machines, sniffers, sandboxie etc. Tick those if you would like any. Once you are done, move over to build and click Build server. The tick box about compressing with UPX will reduce the server's output size - tick this if you want. Once your server has been built succesfully you should see it in the DarkTrack directory folder like so:

Spoiler ([Click to View](#))

Stage 3: Testing

Now to make sure that everything is working we should test our file to make sure it works correctly. If you are fortunate enough to have a test environment such as VMWare Workstation, VirtualBox etc drag your executable we just created into there and run it. Assuming all goes well it should appear in your client list like this:

Spoiler ([Click to View](#))

If you do not have a virtual machine Sandboxie should work just fine - just make sure you don't have anti-sandboxie enabled in the settings! I also believe members such as Kenjii and Purple Kief

have testing services should you want to take advantage of those, too.

Known bugs and relevant information:

If you encounter any other bugs please inform me and I will update this thread.

I believe that is this tutorial finished. Again, massive thanks to LuckyDuck for coding this and UKNinja for bringing it to HackForums. Hope this helped.

Reserved for future content.

Purple Kief - June 30, 2016, 5:56 am

Good job mate, will make sure to link this whenever I get the chance. :)

bzr? - June 30, 2016, 5:58 am

(Jun 30, 2016 05:56 AM)Purple Kief Wrote: [\[CITE\]](#) Good job mate, will make sure to link this whenever I get the chance. :)

Cheers man. Wanted to get this out ASAP since I really think this is going to be the 'next big thing'

VirtualMon3y - June 30, 2016, 6:12 am

(Jun 30, 2016 05:58 AM)BzRk Wrote: [\[CITE\]](#) Cheers man. Wanted to get this out ASAP since I really think this is going to be the 'next big thing'

Nice tut Bro. I will link this in the main thread. You want to join the official support for this with K3njii?

bzr? - June 30, 2016, 6:17 am

(Jun 30, 2016 06:12 AM)UKninja Wrote: [\[CITE\]](#) Nice tut Bro. I will link this in the main thread. You want to join the official support for this with K3njii?

Yeah of course - I believe you have my Skype? Glad to help out with this

synggravez - June 30, 2016, 6:20 am

(Jun 30, 2016 06:12 AM)UKninja Wrote: [\[CITE\]](#) Nice tut Bro. I will link this in the main thread. You want to join the official support for this with K3njii?

Thanks bro . I will archive this in my RAT setup sub thread and also refer your thread. Then you refer this thread. Then omni will post this in his own subsection of hackforumsm. Then in th subsection of hacking tools section thanks!

VirtualMon3y - June 30, 2016, 7:08 am

(Jun 30, 2016 06:17 AM)BzRk Wrote: [\[CITE\]](#) Yeah of course - I believe you have my Skype? Glad to help out with this

Pls PM me your skype bro I may have it but I forgot...

One more thing to add to your thread maybe. I tested with Cyberseal (.net) and Static Crypter 3 (Autoit) and in both cases I had to always "inject to self" when crypting the server. I also found that if I ticked UPX to build then the server would corrupt. I would be interested in your findings in this as well and possibly add this to the thread.

K3njii - June 30, 2016, 7:12 am

(Jun 30, 2016 06:17 AM)BzRk Wrote: [\[CITE\]](#) Yeah of course - I believe you have my Skype? Glad to help out with this

(Jun 30, 2016 03:34 PM)Luckyduck Wrote: [\[CITE\]](#) Excellent tutorial. Thanks @Bzrk.

Cheers dude. Wouldn't be there without your RAT!

ColbzigotdaHax - June 30, 2016, 8:14 pm

Does the get password function work when u have a client? because I tried this on myself and I go to control options for client (myself) and looked at the password list and it was empty?

Also I would like to add, tried to crypt it with Inferno Crypter (Free FUD crypter that's new) and it was a 12/35 detection on nodistribute, tried using same settings on crypter as I did with the darktrack stub with a NJ rat stub and got a 1/35 detection. I don't think its cryptable. It would be helpful if you posted a list of crypters that ARE compatible with this RAT.

Transporter007 - July 1, 2016, 12:52 pm

Nice tutorial. Keep up the good work.

bzr? - July 1, 2016, 12:56 pm

(Jun 30, 2016 08:14 PM)ColbzigotdaHax Wrote: [\[CITE\]](#) Does the get password function work when u have a client? because I tried this on myself and I go to control options for client (myself) and looked at the password list and it was empty?

Unfortunately I have not tested the Inferno Crypter with this so I can't directly answer your question, but I am well aware that CyberSeal works perfectly with it, and I believe UKNinja has successfully tested Static Crypt v3 with this too. Most crypters should work - if not double check your settings and

/ or contact crypter owner for more information.

(Jul 1, 2016 12:52 PM)Transporter007 Wrote: [\[CITE\]](#) Nice tutorial. Keep up the good work. Thankyou for the compliment.

This tutorial was done in a virtual machine - you must be doing something wrong. Do you mean running the binary or the controller? Make sure anti -virus' and firewalls are turned off.

ColbzgotdaHax - July 1, 2016, 1:15 pm

(Jul 1, 2016 12:59 PM)BzRk Wrote: [\[CITE\]](#) This tutorial was done in a virtual machine - you must be doing something wrong. Do you mean running the binary or the controller? Make sure anti -virus' and firewalls are turned off.

It works fine on a VM with NJ rat maybe some settings arnt fully functional but its not showing up as a client on DT. Obviously ports are fine because it work fine when I execute the stub myself and a stub from NJ works on VM

Soulander - July 2, 2016, 7:43 am

"persistent server" doesnt work? i tried it on vm, killed the process and it didnt respawn or anything like that..

VirtualMon3y - July 2, 2016, 11:00 am

(Jul 1, 2016 01:15 PM)ColbzgotdaHax Wrote: [\[CITE\]](#) It works fine on a VM with NJ rat maybe some settings arnt fully functional but its not showing up as a client on DT. Obviously ports are fine because it work fine when I execute the stub myself and a stub from NJ works on VM

It works fine with a VM. Get some help from on of the many free helpdesks on HF bro.

(Jul 2, 2016 07:43 AM)Soulander Wrote: [\[CITE\]](#) "persistent server" doesnt work? i tried it on vm, killed the process and it didnt respawn or anything like that..

It works fine, although I have had issues with persistence if I used it in the RAT builder and then used my Crypter to inject to a Windows process. If you want the functions of DT4 (in this case persistence) then use "inject to self" in your Crypter and it will work 100%.

DT4 can't take responsibility for issues with your crypter folks.

Anyone an idea?

I'm assuming 10.211.55.20 is your Local IPv4? I know this will sound silly but make sure you are using the public IP found at <http://whatismyip.org> when you build the server. Refer back to stage 2 for instructions.

(Jul 3, 2016 01:29 PM)Toscan Wrote: [\[CITE\]](#) Thanks for this post brother! Lot's of useful information for new people using this!

Thankyou very much - that is my aim exactly

I replied to your PM to this question

"If you have a make sure your DNS is going back to your public ip. First make sure your DNS is configured correctly after that go to console and type "ping (your DNS here no parentheses)" see if it goes back to your public ip. If that works you should be good!"

If you don't have a DNS I suggest purchasing Armadas secure DNS service or using FagDns

bzr? - July 18, 2016, 4:45 pm

Just giving this a bump, figured it needs one.

joemakkin - July 18, 2016, 9:08 pm

This Program is not operating startup.

If startup available, HKCU Startup registry confirm 'stubfile' PATH.

But this program is not able to confirming startup registry.

VirtualMon3y - July 19, 2016, 8:20 am

delete it and install it again

ImSection - August 20, 2016, 11:37 am

Whenever I double click on the stub it doesn't show up in the connection's tab. Any ideas on why is that? Nice thread btw, thnx for contributing, definitely took time to write. :)

2K2k - August 21, 2016, 7:07 am

So I can't test it on my own machine? I have to test it on another one?

edit: Tested with another RAT and that works so why Doesent DT want to work?

hamid147 - August 23, 2016, 4:25 pm

sup bro i can get it to connect via noip and other stuff only connect via 127.0.0.1 please help me out

minato44222255 - August 24, 2016, 10:51 am

I recently deleted the my darktrack folder and setup a new fresh one .. I used the exact same settings as previous one and only 2-3 clients connected back. After repeating this none of them connect back . Can anyone tell me what i might have done wrong ?

bzr? - August 25, 2016, 2:52 pm

(Aug 21, 2016 07:07 AM)2K2k Wrote: [\[CITE\]](#) So I can't test it on my own machine? I have to test it on another one?

edit: Tested with another RAT and that works so why Doesent DT want to work?

Something must be setup wrong on DarkTrack then. There is no reason why you can't use your own machine for testing.

(Aug 23, 2016 04:25 PM)hamid147 Wrote: [\[CITE\]](#) sup bro i can get it to connect via noip and other stuff only connect via 127.0.0.1 please help me out

Don't use no-ip. get a domain from namecheap or use FreeNom.

(Aug 24, 2016 10:51 AM)minato44222255 Wrote: [\[CITE\]](#) I recently deleted the my darktrack folder and setup a new fresh one .. I used the exact same settings as previous one and only 2-3 clients connected back. After repeating this none of them connect back . Can anyone tell me what i might have done wrong ?

Probably anti-virus detecting the binary and deleting.

PTPM - August 31, 2016, 11:03 pm

Nice tut OP. Only prob I had was the port forwarding, but got it figured out and its all set up.

kind of related question: whats the recommended site to scan your server with?

bzr? - September 1, 2016, 4:23 am

Updated thread with original DarkTrack copy.

VA Tragedy - September 25, 2016, 10:09 am

when i goto build my server it says "settings cannot be written to file". And the server melts itself upon running it

bzr? - September 30, 2016, 3:43 pm

(Sep 25, 2016 10:09 AM)VA Tragedy Wrote: [\[CITE\]](#) when i goto build my server it says "settings cannot be written to file". And the server melts itself upon running it
Try moving the DarkTrack folder to your desktop and see if that helps.

201 - October 1, 2016, 12:01 am

Thanks for the TuT, helped me out in setting up DT

Imfa0 f0kin idiot I bet ur program doesnt ven run in $O(n \log n)$

Dayna - October 1, 2016, 1:20 am

is this rat better than darkcomet?

Pulz - October 2, 2016, 11:02 am

Hey OP, which in your opinion is the better choice.
Darktrack or Orcus, I've seen some of your guides so was just wondering.

All in all looks like a good tutorial. One that I'd be more inclined to look into in greater detail pending your advice on the previous question.

Cheers.

bzr? - October 2, 2016, 12:26 pm

(Oct 1, 2016 01:20 AM)Dayna Wrote: [\[CITE\]](#) is this rat better than darkcomet?Yeah this is better than darkcomet for sure.

(Oct 12, 2016 01:14 PM)maximisxxx Wrote: [\[CITE\]](#) Me too. It just dont work, i did all the instructions. u should have a working dns and forwarded port. if u disabled all as u said including smartscreen it should work very fine. it is important that u are already listening on port before u check the port or build a server or connect to a client. And with every port check u should get one incoming connection to RAT (1). Forward port -> start listening on port in RAT -> check ur port in canuseeme. it still works for me with AV measures on. if dns resolves ur ip correctly it WILL work :)

If the port wont work u should look if there is another router or modem or something like that that block the port. If not contact provider. There could be a problem with ipv4 ipv6 and they can makes changes

U can use a debugger to analyse
best regards,

VirtualMon3y - December 14, 2016, 5:17 am

(Dec 14, 2016 06:10 AM)Computerjul Wrote: [\[CITE\]](#) i recommend noip for ddns.
Nice that you are trying to help bud but please do not suggest people use noip to anyone and I suggest not using it yourself either... Owned by Microsoft, they will ban your account and DNS as well as report to to spamhaus ?

EDIT: Thanks for keeping this alive BzrK. Hopefully one day we will see the return of Luckyduck....

Computerjul - December 14, 2016, 5:25 am

Edited. I didnt really think of it. I used TV before. I came with the expectation that it is NOT for malicious purpose. For me it isnt. So why should MC do something like that ? :O

VirtualMon3y - December 14, 2016, 6:26 am

Okay, that's fine. Have a read through this guide and I'm sure you'll understand everything you'll need to know.

<https://hackforums.net/showthread.php?tid=5327327>

Kanser - January 11, 2017, 1:10 am

This works great! Been testing it for a little while now and this is a great tool. But i'm having one problem. It might not be DarkTrack's fault but i'm posting just in case.

I created a server with no features added, and crypted it with CryptEx (Going to purchase better crypter soon). Persistence and startup was checked on the crypter. Pumped it a bit, removed version info and bound it to another file.

When i launch the file it works completely fine, and it works after turning computer on and off etc, but after leaving it idle for a while it disappeared. The process is still running. When i tried killing the process it connected to darktrack again.

Same happened even with no antivirus installed.

bzr? - January 24, 2017, 11:55 am

Small Update

Although the Coder luckyduck hasn't been seen here for a while, it seems he's been hard at work coding the next version of DarkTrack (5).

Check it out here: <http://darktrack.net>

Wespa - January 24, 2017, 1:21 pm

Posting to come back to this later.

Looks nice.

catch22 - March 21, 2017, 12:34 am

can not copy stub.exe to server it sais that when i click build what does that mean

Computerjul - March 21, 2017, 3:06 am

Never tested.. is this a well coded quality RAT ? Or should i stay with LL/IM and wait until the new DT Release ? This RAT here has some interesting features

Best regards

bzr? - March 21, 2017, 7:27 am

(Mar 21, 2017 03:06 AM)Computerjul Wrote: [\[CITE\]](#) Never tested.. is this a well coded quality RAT ? Or should i stay with LL/IM and wait until the new DT Release ? This RAT here has some interesting features

Best regards

Stick with your current one's for now, this is a decent RAT, but it has it's problems

MindFreak™ - March 22, 2017, 11:14 pm

DarkTrack is really massive RAT with hug features compared to other native RATs but still needs some more features that everyone looking for, like reverse proxy, IE & Safari & Opera & mailclients password recovery and RDP.

IKSector - April 4, 2017, 7:25 am

The tutorial was very straight and clear. Thanks OP. I was able to set this up and got it working. However, I got notification for available update in the update tab, but the update could not be downloaded. Any ideas on how to get the most recent update? ...if any

bzr? - April 4, 2017, 1:40 pm

No new version has officially been released that I know of.

IKSector - April 4, 2017, 2:11 pm

(Apr 4, 2017 10:43 AM)UKninja Wrote: [\[CITE\]](#) Oh this is interesting.... Is the website showing the new version?

EDIT: nope :(

Not the website exactly, the 'update' tab on the workstation itself.

EvilNerd - April 6, 2017, 11:10 am

I still don't understand if this RAT works or not.

I've tried to create a server and run it on a VM, but don't connect to the client, instead tried to connect to 10.211.55.20:9633 ?

It's a private LAN address, cannot connect there
very weird
?

bzr? - April 6, 2017, 11:20 am

Won't lie, this RAT is rather unpredictable. Works perfectly for some, and for others not at all...

Hopefully if 5.0 ever comes out that'll be much better

M.enroK - May 16, 2017, 9:54 pm

Hello OP, thanks for great tutorial, i have a little question, i am noob on these things. I got stuck on how to open port, i have TP-LINK router just a question, is this tutorial gonna work who is shown there in video? <https://www.youtube.com/watch?v=R8IS7YqErtA> I just want to be sure before i do, i don't want to do something wrong. Will i be able to use this RAT after i follow everything what is shown on this video, after i have open ports? Sorry mate, i am new

In theory, yeah, should work fine. Alternatively you can get a VPN and use that instead to port forward. Would be more secure and potentially more reliable. I recommend Cryptic and nVPN.

M.enroK - May 16, 2017, 10:32 pm

It's not 100% safe, but if you're just putting a RAT on there to control I see no immediate problems.

(Jun 1, 2017 07:05 AM)raghavsood999 Wrote: [\[CITE\]](#) Is dark track 5 out and is it free?

Obviously you wouldn't find an answer in a dead 1+ year old thread. Use your brain please.

DiGiTaL.ana - April 29, 2018, 5:00 am

wonderful post thanks for sharing

HebsCoast - April 29, 2018, 4:40 pm

Hello everyone,

first excuse me in advance if I post in the wrong category I am French and very bad in English (the proof is that I made this post by google translation) so I have a little problem I decided to to interest me at the RAT ...

so I chose: DarkTrack Alien 4.1 which seemed good for me to start, but I do not understand a thing just now I could build my "server" in .exe and when I wanted to run it on my my computer it told me: Windows can not access the device, the path or the specified file. You may not have the appropriate permissions to access the item.

I decided to re-build and now it's no longer .EXE and DarkTrack during the build says: Can not copy stub.exe to server.exe

If anyone has an answer to help me that would be appreciated. (And if the person who answers me wants to try to have a good spelling so that I can translate it would be great)

Thank you in advance !

Peronasama - May 1, 2018, 2:38 pm

Maybe you make the .exe with adm ? Or maybe your antivirus block the backdoor? Try right click and run like adm... and close your antivirus... if still same error try other rat to see if the problem is your .

kerber0sik - May 3, 2018, 8:34 am

This is the first time I'm seeing this RAT.

Can someone share his experience with it?

fallen0014 - May 6, 2018, 4:42 pm

thank you for your dedication, easy guide, and contribution!

lemb59 - May 27, 2018, 6:39 pm

hi, when I start dark track, a push notification warns me that the customer is connected, while looking into the connections I can not find any connected customers,

What could be the cause?

initially the client's PC is connected, everything seems to work, when the client's PC can be restarted I can only see a connection notification but from the dark track client I do not see any connection, i use crypter with very good persistence i get a fud file

Err0rr - May 27, 2018, 7:39 pm

Looking very good rat.... i think much important is stability
