Thread: [\[TUT\]Latest Google Fresh Dorks {6/2016} & How To Making SQLI Dorks With details\[/TUT\]](#)

InjectorBoy - July 1, 2016, 7:07 pm

Hi EvryBody ? Here is a List of Latest Google Dorks 6/2016. Google Dorks is mostly used over Internet to Perform SQL Injection. Before Performing SQL Injection We Need to Find Vulnerable Website So, Google Dorks are the Small Codes that Spot Vulnerable sites Index in Google Search Engine. Many of Hackers & Cracker use Google Dorks to Test Websites Vulnerabilities. On the Other Hand Google Dorks is also used by Hackers and Crackers to deface Vulnerable Websites.

In Other Words you can Say that now Google Help you to Find Vulnerable Websites that Indexes in Google Search Results. By Showing Small ID's in Search Engines Websites Show that It is Easily Effected by SQL Injection.

PHP Code

```
<?php
```

<http://pastebin.com/jAhtjuTp>

And To Creating Your Own Google Dorks And Find Vulnerability In Website please follow me

A method of finding websites vulnerable to SQL injection is using what we call "dorks"

Dorks : They are like search criteria in which a search engine returns results related to your dork. The process can be a little time consuming, but the outcome will be worth it after learning on how to use dorks.

Basic Formula of dork,

PHP Code

```
<?php
```

```
"inurl:."domain"/"dorks"/"country" "
```

So you would normally understand it like this:

"inurl" = input URL

"domain" = your desired domain ex. .gov

"dorks" = your dork of your choice

"country" = country Shortcut name

You can use following words instead of inurl :

PHP Code

```
<?php
```

intitle:

inurl:

intext:

define:

site:

phonebook:

maps:
book:
froogle:
info:
movie:
weather:
related:
link:

now I am going to explain you how to use some for finding vulnerability in websites.

1: intitle:

You can use the intitle to find anything in the title of the website. Which also could be usefull to find downloads or anything else.

PHP Code

```
<?php  
intitle:rte/file_upload
```

This is an example to find rte vulnerables.

2: inurl:

The inurl basicly looks for anything after the : in the site urls.

PHP Code

```
<?php  
inurl:index.php?id=
```

3: intext:

you can find literally everything using intext, you could even use the inurl dorks whit this.

PHP Code

```
<?php  
intext:"powered by mybb"
```

Using it we could find certain messages in a site. Above message looks for all mybb forums. Which means if I ever find a vulnerability in mybb forum and know how to locate it! then I can find out every mybb forum vulnerability using this dork.

4: define:

Google will define this massage and will look for what had this error for example,

PHP Code

```
<?php  
define:"sql syntax error"
```

5: site:

Obvious, when we will use it, google will looks for a site .

PHP Code
<?php
site:cocacola

Google will look for any site related with cocacola.

6: phonebook:

It will look for the phone number related to it given name.

PHP Code
<?php
phonebook:wildhacker

7: maps:

Google will look on google maps for your search.

8: book:

Google has an online library store. If you want to find interesting books use this dork.

PHP Code
<?php
book:java language

This will look for any book google has indexed with java language in it.

9: froogle:

Used for froogle search instead of google.

10: info:

google looks for anything you inputted but only information about string which you have put next to info: .

PHP Code
<?php
info:firefox

Above dork will show you a lot of things about firefox like what is firefox etc.

11: movie:

You can find information about movies on google using this dork.

PHP Code
<?php
movie:watch hackers2 online

12: weather:

You can find information about weather on google using this dork.

PHP Code

```
<?php
```

```
weather: 21/12/2011 london
```

13: related:

This will look for anything related to what you have entered next to related: .

PHP Code

```
<?php
```

```
related:egg
```

Google responds with sites about chickens laying eggs.

14: link:

This one will work better instead of only looking in search url, it will also look in the site for urls that possibly are vulnerable.

PHP Code

```
<?php
```

```
link:index.php?id=
```

This is very useful I would say even more than inurl.

Now Let's Work the Basic Formula of dork will be like this

PHP Code

```
<?php
```

```
"inurl:."domain"/"dorks"/"country" "
```

Let's see what we will do with this Formula of dork

#1# in the first part [domain] you will add one of this domain you love .

PHP Code

```
<?php
```

```
gov = Government websites
```

```
edu = Educational websites
```

```
org = Organizational websites
```

```
com = Commercial websites
```

```
info = Informative websites
```

```
net = Networking websites ( similar to .com)
```

#2# in the second part (dorks) you will add your dork [as I say in the introduction will be something like this]

PHP Code

```
<?php
```

book.php?id=
event.php?id=
news.php?id=
categorie.php?id=
category.php?CID=
Details.php?id=

#3# in third part (country) you will add the country Shortcut name any one you like fr0m this list :-

PHP Code

```
<?php  
http://pastebin.com/mzqCv0dC
```

Ended interpretation part

now lets trying to find vulnerable website online

our Formula of dork

PHP Code

```
<?php  
"inurl:."domain"/"dorks"/"country" "
```

in this part I will Choose in domain the [gov] and in dorks the [php?id=] and in country the [BR]

and will be like this

PHP Code

```
<?php  
"inurl:."gov"/"php?id="/"BR" "
```

now going to google and fun

The End

Hope This Simple TUT Loved Fr0m You

InjectorBoy - July 1, 2016, 9:29 pm

welcom my Randelixim sir

in my tut I get some Definitions like

PHP Code

```
<?php  
intitle:  
inurl:  
intext:  
define:  
site:  
phonebook:  
maps:
```

book:
froogle:
info:

from here in this site found not from yours

PHP Code

<?php

<http://link4networking.blogspot.com.eg/2013/01/website-hacking-creating-your-own.html>

to make my tut more helpfull

am added Latest Google Fresh Dorks in the first and added country Formula of dork with all data belong to country Shortcut name to make new Formula and make interpretation to all this and make example to find vulnerable website online in the end

all this to make free help to my friend here nobody like me not to get positive reputation I don't care about this thing

in the end thx to you To guide me to add the source to my tut

Regardsles sir

liltaw10 - July 2, 2016, 7:17 am

Thanks for this little tutorial :D

it used here to Find Vulnerable Website to sql injection

PurineGAWs - April 16, 2018, 8:07 am

Awesome! Great Dorks. Gonna try now.
