Thread: [QUESTION - Myspace data breach](#)

chaose_marine - July 2, 2016, 6:56 pm

So i just got a hold of a massive 32.8 GB of data from the most recent Myspace data breach, i didnt know where else ask this as there is nowhere (to my knowledge) on HF about hashing or types of hashes there are.

However if you look here

"0xDC159044B47B0D1075BC2234CEF74CA3F5B0CA55"

this is a password from an account, but i want to know what type of hash this has been through (if its possible to tell) and what type of rainbow table do i need to crack these passwords

(or any other way you suggest to crack these)

Your Pal - July 3, 2016, 1:53 am

just use hashcat/password pro or online hash crackers

0xDC159044B47B0D1075BC2234CEF74CA3F5B0CA55 : 787229

Are you saying that 787229 is the password/part of the password

Sounds good. Remember to get quality pw lists.

Okay thanks and i found a password list page on git hub, have a look its what i call the holy grail (not my content): [github.com /danielmiessler/SecLists/tree/master/Passwords](https://github.com/danielmiessler/SecLists/tree/master/Passwords)

Here is a link to the data breach file that i referenced, it was requested in PM but i haven't got the right privileges to PM back that just yet

It is: myspace (dot) thectulhu (dot) com
