Thread: [Native Windows 7 progressbar API](#)

DeStilleGast - July 3, 2016, 3:19 pm

So, its been a while that I have posted here something and decided to release a script to use the Windows 7 native progressbar (should work on windows 7 and higher). This can enchant specified tasks and stuff.

Info:

can set a maximum, so you can set it to 3 for like 3 tasks

can set 3 lines as seen in the GIF

can set a cancel message and you can see when a user cancel's it

if the max is reached it will do the waiting animation

How it looks like: (I for forgot to turn off TeamViewer thats why you see <->)

Code from the preview is in the pastebin under sub PreView()

Code:

<http://pastebin.com/fG8MPfWW>

Credits:

Original source: Pietschsoft (also in the source)

Converted to VB.NET: DeStilleGast (me)

This is actually really nice. Great contribution! Keep it up! :)

Goed gedaan, ga zo door.

Code Public Class IProgressDialog

You probably shouldn't prefix class names with 'I'.

Thx ?

Dankje ?
